

Main Branch Black River Green's Landing

Fish Species

Brook Trout

Species Description

Brook trout are the primary trout species encountered at this location.

Geographic Coordinates

Lat:45.108067 / Long:-84.4563

Noteworthy

This upper remote reach of the Black River is popular with some local anglers. Access is limited and should only be attempted with the right vehicle. There are two access sites known as this landing, one further upstream on a small twotrack. This is remote, wild country. The river is suitable for some fly fishing, but is good for all angling types. Brook trout up to 10 inches dominate. Gradient is slow to moderate with tag alder and conifer riparian zones. Stream bottom is mostly sand, with some gravel. This is the beginning of a long reach of decent water on the Black River.

Fishing Regulations

This site on the Main Branch of the Black River is a designated Type 1 trout stream. Please refer to the Inland Trout and Salmon Stream Regulations in the current Michigan Fishing Guide.

Directions to Site

Access requires the proper vehicle. From Old Vanderbilt Road where it intersects with Black River Trail, continue 0.3 mile to trail road on south which is Greens Trail. Turn south and follow in a southerly and then southeasterly direction for 1.2 miles at which point the first access trail can be found. Turn east (left) and continue to trail end. River can be found 0.1 mile east through wetlands. Additional access points can be found by taking prior trail road further south and east, but vehicular travel is precarious.
