

## Main Branch Black River Sparr Road

---

### ***Fish Species***

Brook Trout

### ***Species Description***

Brook trout are the primary trout species encountered at this location.

### ***Geographic Coordinates***

Lat:45.05445 / Long:-84.431283

### ***Noteworthy***

This is the headwaters of the mainstem Black, which is occasionally called the West Branch. This reach is dominated by lowland conifers and low gradient. This reach sees little pressure except for an occasional angler trying to catch a brook trout below the culvert at Sparr Road. Beaver dams and log blockages are common. Fly angling would be all but impossible.

### ***Fishing Regulations***

This site on the Main Branch of the Black River is a designated Type 1 trout stream. Please refer to the Inland Trout and Salmon Stream Regulations in the current Michigan Fishing Guide.

### ***Directions to Site***

From the southerly bend at Sparr Road 3.0 miles west of Meridian Line Road continue south for a few hundred feet. The river can be accessed directly west.
