

## Pigeon River Webb Road

---

### ***Fish Species***

Brook Trout; Brown Trout; Steelhead

### ***Species Description***

Brook trout are less common here, since the river flows a bit warmer than in upstream reaches. Brown trout and rainbow trout are prevalent. Brown trout can reach up to 24 inches here and downstream many miles, but most will only be swayed to hit at night due to their nocturnal habits. Juvenile rainbows are found in these waters, and typically are caught when they are less than 8 inches long. Adult steelhead from Mullett Lake migrate through this reach in the fall, winter, and spring, spawn in the river, and return to the lake by May or June. April would be the best time to look for 15-25 inch steelhead at this location.

### ***Geographic Coordinates***

Lat:45.27175 / Long:-84.4598

### ***Noteworthy***

The river is getting larger here, with some fast current challenging the angler. Deeper holes are also more prevalent. Sand, gravel, and cobble are the primary substrate. Streamside corridors are lined with a mixture of hardwood and conifer trees. Check out the rope swing at this location. Only the brave swing from it in to the river!

### ***Fishing Regulations***

This is a designated Type 4 trout stream. Please refer to the Inland Trout and Salmon Stream Regulations of the current Michigan Fishing Guide. Anglers can fish all year round and possess the appropriate bag limit of steelhead throughout the year. Brook and brown trout may only be harvested from the last Saturday in April through September.

### ***Directions to Site***

Webb Road is a large dirt road that crosses the Pigeon River in the state forest. Webb Road runs east to Osmun Road, and west towards the town of Wolverine. There is parking alongside the bridge and small turnoffs for a small number of vehicles.
