

Compartment Review Presentation

Grayling Forest Management Unit

Compartment 72015

Entry Year 2026

Acreage: 1,980

County: Oscoda

Management Area: Avery Hills

Stand Examiner: Cole Michaud

Legal Description:

T28N R3E Sections 19, 20, 21, 22, 27, 28, and 33
T28N R3E Sections 19, 20, 21, 22, 27, 28, and 33
Clinton Township, Oscoda County

Identified Planning Goals:

To maintain species and structural diversity while managing for health, productivity, and sustainability throughout the compartment. To provide multiple use opportunities and incorporate any visual management needed to optimize these uses.

Soil and topography:

Soils range from Grayling and Roselawn Sands in the compartment's west half, to Emmet and Kalkaska Sandy Loams and Rubicon-Roselawn Sand.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

This compartment consists of solid state ownership with the exception of private lands located in section 19 & 22 and around the boundary of the compartment. Private lands range from farms and full time residences to seasonal cottages.

Unique Natural Features:

No Unique Natural Features known.

Archeological, Historical, and Cultural Features:

No Archeological, Historical, or Cultural Features known.

Special Management Designations or Considerations:

None at this time.

Watershed and Fisheries Considerations:

This compartment contains a portion of a small, unnamed tributary to Boiling Springs Creek. Prescribed treatments are appropriate for the protection of this waterbody.

Wildlife Habitat Considerations:

With its mix of vernal ponds, northern hardwoods, some upland pine, oak and aspen cover types, this compartment supports a variety of wildlife species including hare, grouse, turkey and deer. Several vernal ponds exist in steep-sided potholes in the compartment.

Mineral Resource and Development Concerns and/or Restrictions

Antrim gas wells and pipelines have been developed in the compartment. There are seven active well sites. Surface sediments consist of glacial outwash sand and gravel and post glacial alluvium and an end moraine of medium-textured glacial till. The glacial drift thickness varies between 200 and 600 feet. Beneath the glacial drift is the Coldwater Shale. There is not an economic use for the Coldwater Shale Layer. Gravel pits are located in Section 27, including the State's Old Bailey Road Pit, and potential is good. The Compartment is leased for oil and gas and over half of it has been developed for the Antrim Shale.

Vehicle Access:

County roads include: Boiling Springs Road (seasonally maintained), Bailey Road, Cedar Run Road and Highway M-33. Access through Sections; 19 and 20 has been expanded by the existing flowlines. Gates have been installed at designated locations, currently the one blocking the access road to stand 405 is being driven around. The private property adjacent to State land in Section 33 is accessed only along a two track (old railroad grade) across State land.

Survey Needs:

None at this time.

Recreational Facilities and Opportunities:

The compartment does contains one designated recreational trail called the (Hunt Creek Loop) an ORV trail located in Sections 19 and 20. The compartment does support dispersed recreation in the form of hunting, as evidenced by the abundant tree stands littering the compartment.

Fire Protection:

The compartment's limited road system will affect fire access and response times. The minimal roads and steep topography within Section 27 and 28 will limit any initial attack. Some roads are sandy and may hinder access for tankers. The closest body of water, that could be used as a water source is Second Lake, located 5.5 miles to the west.

Additional Compartment Information:

Past records have shown that harvests in this area have created controversy. More effort is needed to keep township officials apprised of proposed actions.

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
Comments				

Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
 HCVA = High Conservation Value Area
 SCA = Special Conservation Area

Conservation Area	Type	Description
ERA	Ecological Reference Areas	Ecological Reference Areas (ERAs) are high quality examples of natural communities that have been identified as Element Occurrences (EOs) by the Michigan Natural Features Inventory (MNFI) within the context of their natural community classification system. Element Occurrences with viability ranks of A (Excellent) or B (Good) and a Global (G) or State (S) element (rarity) ranking of endangered (1), threatened (2), or rare (3) serve as an initial base of ERAs. They may be located upon any ownership in the State. The system is comprised of individual or associations of natural community types that are managed for restoration and maintenance of natural ecological processes and values. The public may submit recommendations for lands as ERAs using the DNR Conservation Area Recommendation Form.

22	4111 - S.Maple, Hard Mast Association	Sawtimber Well	214.2	106	111-140	N/A	Old Comments: Stand thinned 1996 - 1998 and then an EAB salvage in 2010. Some areas were not cut due to steep slopes. Ground vegetation solomon seal, gold thread, trillium etc. Subcanopy heavy to beech and pockets heavy to ash, not a whole lot of hard maple in the sub canopy. Striped maple was also present. Rolling to steep terrain. This site was also part of the Oscoda County Timber Theft case. Ten BA swings were taken with a stand average of 79. Individual species were 49 for S Maple, 7 Basswood, 1 P Birch, 8 Beech, 11 Red Oak, 1 B Aspen. The stand is primarily PARVVb/AFO, there is a pocket of AFO in NE Corner. Still dominated by sugar maple. with basswood, birch, beech, and scattered oak, some ash regen present but all overstory ash is gone or are standing snags.

36	4110 - Sugar Maple Association	Sawtimber Well	29.6	107	51-80	N/A	Old Comments: Stand thinned in 2020 (72-001-16). Rx was to remove aspen, ash and beech and then thin down to 70sqft/acre. Small hardwood stand of decent quality and species diversity. Buts up against private land with rolling terrain. Beech in this stand does not show signs of BBD, however, over half the white ash in the stand were dead, primarily stems in the co dominant canopy position. Regeneration layer was fairly heavy to beech with sugar maple. Ground cover was trillium, trout lily, D Britches etc. Four BA swings were taken and stand average was roughly 130, BA for individual species recorded were Sugar maple 57, B Aspen 33, Beech 28 and ash 2. Entire stand is PARVHA/PArVVb and site index was 52.

Northern Pin Oak		3	Sapling	3		Red Maple		Low	< 5 feet	Sapling	
						White Pine		Low	< 5 feet	Sapling	
45	790 - Other Bare/Sparsely Vegetated	Nonstocked	12.2			No	This used to be the old Bailey Gravel Pit, area has very little vegetation with exposed sand and rock, waste land that has alot of wood debris dumped along the perimeter, Good place for decking wood when treating adjacent stands.				

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments
-------	--------------------	--------------	-------	-----------	----------	--------------	------------------

46	310 - Herbaceous Openland	Nonstocked	68.5	0	Unspecified	No	Stand was harvested in summer of 2020 (72-001-16). Exped mixed upland deciduous with conifer, monitor natural regen at re-inventory. Mixed stand with pockets of pure red and white pine. Aspen and jack pine not looking real good, aspen has cankers and jack pine dying off. Other stands in immediate area have been treated by removing all species except pole to small log size red and white pine, regenerating back as mixed hardwood species. Portion of stand west of Cedar Run Rd should be left as retention. Eight BA swings were taken with a BA of roughly 99, individual species were 18 oak, 26 white pine, 18 red pine, 15 jack pine, 16 aspen, 6 red maple. West half of stand is AFO, East half is PARVHa/PARVVb.
-----------	---------------------------	------------	------	---	-------------	----	---

47	42290 - Natural Mixed Pine	Sawtimber Medium	60.5	85	51-80	N/A	Old OI Stand 35 passes the regen survey with very good hardwood regen of mixed species. Recommend accepting current regeneration in this old oi stand. Pockets of oak regen along with white pine. Portion of stand east of rd less regeneration with a little bit higher BA. Old OI stand 36 Aspen regeneration survey fails, but passes when combined with all other species. Good natural red and white pine regen in areas. Stand was treated in 1998 and 2008, first harvest left all red and white pine second harvest targeted 16"+ pine trees. Six BA swings were taken for this stand with a stand average of 60, BA for individual species are red pine 20, white pine 37 and red maple 3. Stand is split AFO west of Cedar Run Rd and PARVVb east of rd.

48	3205 - Mixed Upland Shrub	Nonstocked	3.3			No	Old county landfill reclaimed with grassy opening, knapweed and some deciduous shrubs mixed in.
-----------	---------------------------	------------	-----	--	--	----	---

49	4119 - Mixed Northern Hardwoods	Sawtimber Well	238.3	111	81-110	N/A	Most of the beech has BBD, even sapling size trees. Old Comments: Portion of the stand was treated between 2008 and 2010. Rolling to steep terrain with some slopes being inoperable especially on the western side of stand. Good site, however, beech is taking over from last treatment, understory/subcanopy is almost all beech, very little maple in sub or ground cover. BBD in the western portion of stand on pole size and up, not present on east side. Some girdled snags still standing. As with all the hardwood stands in this compartment 99% of all ash is dead. Ground cover (sarsapilla, beech, white ash, ironwood, did find some sweet cicely) overall little ground cover. Stand is PARVHa/PARVVb. Site index 55

56	3205 - Mixed Upland Shrub	Nonstocked	9.5	0	Unspecified	No	Old Comments: This area is mostly open grass/sedge with various pine barren species scattered throughout. Contains scattered pockets of cherry, aspen, JP. Most merchantable aspen and jack pine were harvested from stand when adj stand 3 in compt 15 was harvested in 2008 under sale no. 72-029-06-01 entitled Jack and Tom Sale. The harvest targeted taking merchantable timber and protected grassy open areas. Some areas have started to fill in with immature aspen that is mostly 1" or less in diameter. The following species were noted in grassy area: monarda, sweet fern, pennsylvania sedge, bluestem, and some knapweed along trail. No need to perform any specific mgt except monitor knapweed.
-----------	---------------------------	------------	-----	---	-------------	----	--

57	4111 - S.Maple, Hard Mast Association	Sawtimber Medium	31.8	106	51-80	N/A	Stand thinned 1996 - 1998 and then an EAB salvage in 2010. Some areas were not cut due to steep slopes. Ground vegetation solomon seal, gold thread, trillium etc. Subcanopy heavy to beech and pockets heavy to ash, not a whole lot of hard maple in the sub canopy. Striped maple was also present. Rolling to steep terrain. This site was also part of the Oscoda County Timber Theft case. Ten BA swings were taken with a stand average of 79. Individual species were 49 for S Maple, 7 Basswood, 1 P Birch, 8 Beech, 11 Red Oak, 1 B Aspen. The stand is primarily PARVVb/AFO, there is a pocket of AFO in NE Corner.
