

Compartment Review Presentation

Roscommon Forest Management Unit

Compartment 71018

Entry Year: 2026

Acreage: 3,973

County: Roscommon

Management Area: High Sand Plains

Stand Examiner: Brian Martell

Legal Description:

T21N R03W Sections 6 and 7

T21N R04W Sections 1, 2, 11, 12 and 14

Identified Planning Goals:

Maintain current age and species diversity in a range of early and late successional ecosystems as determined by the High Sands Plains management area plan.

Soil and topography:

Terrain is generally flat and mostly low ground, with a few higher ridges. Soils on the low ground are Lupton Muck and Rifle Peat. On the high ground it is Saugatuck sand, Newton loamy sand, Au Gres-Kinross sand and Au Gres-deford sand.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

The entire compartment is under State ownership. There are larger blocks of private ownership on the north end of the compartment and a smaller block on the Eastern boundary.

Unique Natural Features:

Part of the Lost Twin Lakes hiking trail lies in the south end of the compartment. Much of the area around the hiking trail is a SCA and type 2 old growth.

Archeological, Historical, and Cultural Features:

There are known concerns within the compartment and one new occurrence that has been reported to archaeology staff.

Special Management Designations or Considerations:

Much of the compartment is part of an Old Growth SCA centered on the riparian corridor of Wolf Creek. Site of the former Waco Flooding and its associated earthen dam.

Watershed and Fisheries Considerations:

Pup Creek and Wolf creek flow through this compartment. Pup lake lies on the NE boundary of this compartment.

Wildlife Habitat Considerations:

Mineral Resource and Development Concerns and/or Restrictions

No known potential exists for metallic minerals in this part of the state. The closest known active sand/gravel operation is nearly three miles north. Demand for aggregate exists in the area, but potential for sand & gravel development within the compartment appears limited due to the prevalence of wetlands. The closest hydrocarbon production, past or present, is one mile south, in the Headquarters Field. Several oil & gas test wells have been drilled in and around the compartment, but all were dry holes. There has been no recent well permitting activity around the compartment, and there is no current leasing activity involving State-owned oil & gas rights within one mile. Potential for future oil & gas development within the compartment is considered low at this time.

Vehicle Access:

Much of the compartment is inaccessible due to low wet ground and a lack of roads. The portions of the compartment along Waco, Newaygo, Townline, and Rollway roads tend to be higher ground and have good access.

Survey Needs:

None at this time.

Recreational Facilities and Opportunities:

A mixed variety of dispersed activities occur on the land from hiking, to hunting, trapping to disperse snowmobiling. The only designated recreational system is found in the southeast portion of the compartment; Lost Twin Lakes Pathway.

Fire Protection:

Fire danger should be relatively low to moderate in this compartment due to low wet terrain. However, this same terrain could pose problems for suppression if a fire were to occur as vehicle access to the interior of the compartment is very poor. There is also a decent component of jack pine in this compartment that could be problematic in very dry conditions. Under normal conditions this jack pine would be too wet to be of any real concern.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
 HCVA = High Conservation Value Area
 SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Lake	A coldwater lake has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species to persist from year to year. Suitable conditions for coldwater fishes may occur in Michigan lakes if they are relatively deep, have substantial groundwater inflows, or are located in colder (northern) areas of the state. Such lakes are established by Director's action and designated as trout resources by Fisheries Order 200.
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.

104	42200 - Natural White Pine	Sawtimber Well	23.6	91	111-140	N/A	Remote called in 2024, stand was too difficult to access due to early thaw and high water table. Old Comment: Variable aged stand with overmature aspen. Variable species also but only regeneration of significance is white pine. Could be harvested but need to cross about 600 feet of leatherleaf bog to get to it. Its an island in the middle of a bog complex. Re-evaluate in ten years. Maybe able to harvest stand 41 and use it as a stepping stone to cut the distance to travel over bog in half.

105	4319 - Mixed Upland Forest	Sawtimber Well	34.6	99	141-170	N/A	Remote called in 2024, stand was too difficult to access due to early thaw and high water table. Old Comment: Mixed stand with two pockets of natural red pine along the south end. These have a 200 basal area average. Some very large supercanopy red pine mixed in the remaining stand portions. No regeneration underneath except for red maple and oak. The other portions of the stand are sparse with overmature aspen (30b.a.) in the middle with the red maple/black spruce around the perimeter of higher b.a. There are some very large red pine amongst the aspen. Could benefit from a harvest.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments
127	110 - Low Intensity Urban	Nonstocked	1.1		Immature	Managed Opening	Parking lot for the Wraco Flooding managed by Wildlife Division.
128	710 - Sand, Soil	Nonstocked	3.7			Managed Opening	Barren sand for the most part. East end is a managed parking lot for the Wraco Flooding managed by Wildlife Division.
		Sub-Canopy Species		Density	Avg. Height	Size	
		White Pine		Low		Pole	
		Quaking Aspen		Trace		Pole	
129	4130 - Aspen	Sapling Well	13.2	8	Immature	N/A	Final harvested in the spring 2016. Left approx. 10--20 B.A. of supercanopy red and white pine along with some scattered oak for mast. There is a buried petroleum line along the west side.
Canopy Species		% Cover	Size Class	DBH	Age		
White Pine		5	Sapling	1			
Bigtooth Aspen		83	Sapling	1	8		
Red Maple		4	Sapling	1			
Black/Red (Hybrid) Oak		8	Sapling	1			
130	622 - Lowland Shrub	Nonstocked	8.4		Immature	No	Was predominately ash, but it has all died out. Full stocking of tag alder with some cedar and fir scattered about.
		Sub-Canopy Species		Density	Avg. Height	Size	
		Balsam Fir		Low	Variable	Pole	
		Northern White Cedar		Low	Variable	Pole	
131	4131 - Aspen, Oak	Sapling Well	23.3	8	Immature	N/A	Final harvested in the spring 2016. Appears to be a camping spot at the north end that gets alot of use.
Canopy Species		% Cover	Size Class	DBH	Age		
White Pine		2	Sapling	1			
Black/Red (Hybrid) Oak		20	Sapling	1			
Bigtooth Aspen		55	Sapling	1	8		
Quaking Aspen		20	Sapling	1			
Red Maple		3	Sapling	1			
132	310 - Herbaceous Openland	Nonstocked	4.5		Unspecified	Managed Opening	Maintained wildlife opening.
133	6120 - Lowland Cedar	Poletimber Well	23.7	100	81-110	N/A	Major overstory is cedar, No regeneration of it, with only regeneration being black spruce which is scattered about in overstory. Pocket of white pine and red maple at the northeast end. Very wet stand with pockets of standing water.
Canopy Species		% Cover	Size Class	DBH	Age		
Black Spruce		25	Pole/Sapling	6			
Northern White Cedar		70	Pole/Sapling	6	100		
White Pine		3	Pole/Sapling	7			
Red Maple		2	Pole	6			
		Sub-Canopy Species		Density	Avg. Height	Size	
		Black Spruce		Full	>20 feet	Sapling
