

Compartment Review Presentation

Sault Ste. Marie Forest Management Unit

Compartment 45133

Entry Year 2019

Acreage: 1,854

County Mackinac

Management Area: Sage Truck Trail

Revision Date: 2017-07-11

Stand Examiner: Matt Edison

Legal Description:

T44N-R7W Sections 8, 9, 16 & 17; Hendricks Township

Identified Planning Goals:

During this entry period timber management will be minimal within this compartment. There will be selection harvest of northern hardwood stands. Overall the compartment contains a high percentage of lowland conifer and mixed upland/lowland conifer and aspen. The accessible stands have been harvested in the past are now nearing the point where further treatment and regeneration could be considered in the next entry and beyond.

Soil and topography:

Topography is gently rolling upland divided by the West and South branches of the Hendrie River. There is lowland on the north and south edges of the compartment. Soils within the compartment include Wallace sand, Markey-Spot-Finch complex, Finch-Dawson-Pullup complex, Paquin –Finch sands, and Allendale-Wakely complex. Soil is thin in areas and Karst features are present.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

There are three 40 acre private holdings within the inner area of the compartment. Section 16 is adjacent to the compartment in the Southeast and is comprised entirely of privately owned land (Michigan Karst Conservancy) except for one 40 acre parcel that is state owned. The MKC land has many trails and is used recreationally for hiking, caving, etc. Sections 8, 9, and 17 are all surrounded by state ownership. There is a management easement through private land in sections 8 & 9 allowing access to state land.

Unique Natural Features:

Per MNFI, there is a potential for rare, threatened or endangered plant and animal species and natural communities within this compartment. Stands to be managed will be checked for species of concern. Management will be modified if species are found within those stands per management guidelines for that species.

Archeological, Historical, and Cultural Features:

Michigan Karst Conservancy owns land in section 16. Caves found in section 16.

Special Management Designations or Considerations:

Stands 50 and 70 are under special use permit to the Michigan Karst Society. The most extensive limestone cave system in Michigan is in section 16.

Watershed and Fisheries Considerations:

Fisheries Values: Excellent

Fisheries Concerns: This compartment contains the South and West Branch Hendrie Rivers. Both are designated trout streams. Trout are present in these streams and any further beaver activity should not be promoted. Buffers should be applied in treatment stands with a large aspen component and proposed clear-cuts. Streams appear to already be factor limited and buffered in preparation for future treatments.

Wildlife Habitat Considerations:

Compartment 133 is part of the Sage Truck Trail Management Area where featured wildlife species include American marten, black bear, ruffed grouse, snowshoe hare, and white-tailed deer. It contains a mix of cover types ranging from northern hardwoods and upland mixed stands to lowland conifers including black spruce and cedar types. Wildlife objectives include maintaining deer wintering complex, diversifying northern hardwoods and mixed stands to benefit marten, hawks, and bear, and maintaining lowland cover for a variety of wildlife including deer and bear. Portions of this compartment are in deer wintering complex, and treatments in stands in wintering complex will be conducted during the winter months (Dec. 1 - Mar. 31) so tops are available as browse to wintering deer. Hemlock will be retained, and cherry and other mast-producing species will be encouraged to provide food sources for bear and other species. Rare species and their habitats will be protected.

Mineral Resource and Development Concerns and/or Restrictions

Sections 8-9 & 16-17, T44N R7W, Mackinac Co.

There is some sand and gravel production in the area but potential within the compartment appears to be limited. Potential for high-purity (high-calcium) limestone within the compartment is very good. The former Fiborn Quarry is located adjacent to the compartment and Graymont's proposed underground mine is located a few miles to the southwest. There is no current economic oil and gas production in the UP and there is no known metallic mineral potential in this region.

Vehicle Access:

Vehicle access is fair in this compartment. Norton Camp road is a good quality dirt road and is the main access running through the compartment. There are numerous two tracks and old existing logging roads that reach well into each section of the compartment. The areas in section 9 east of Hendrie River and north of Norton Camp road has very limited access due to the lowland type.

Survey Needs:

None needed for treatments this entry.

Recreational Facilities and Opportunities:

All types of hunting is pursued in this compartment. The caves in section 16 offer unique recreational opportunities. Fishing is available in the branches of the Hendrie River.

Fire Protection:

Fire activity within this compartment has been minimal historically. However, with areas of lowland conifer and limited access, there is potential for mop-up of intense fires if one occurs. The Hendrie River branches provide a readily available water source if needed.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

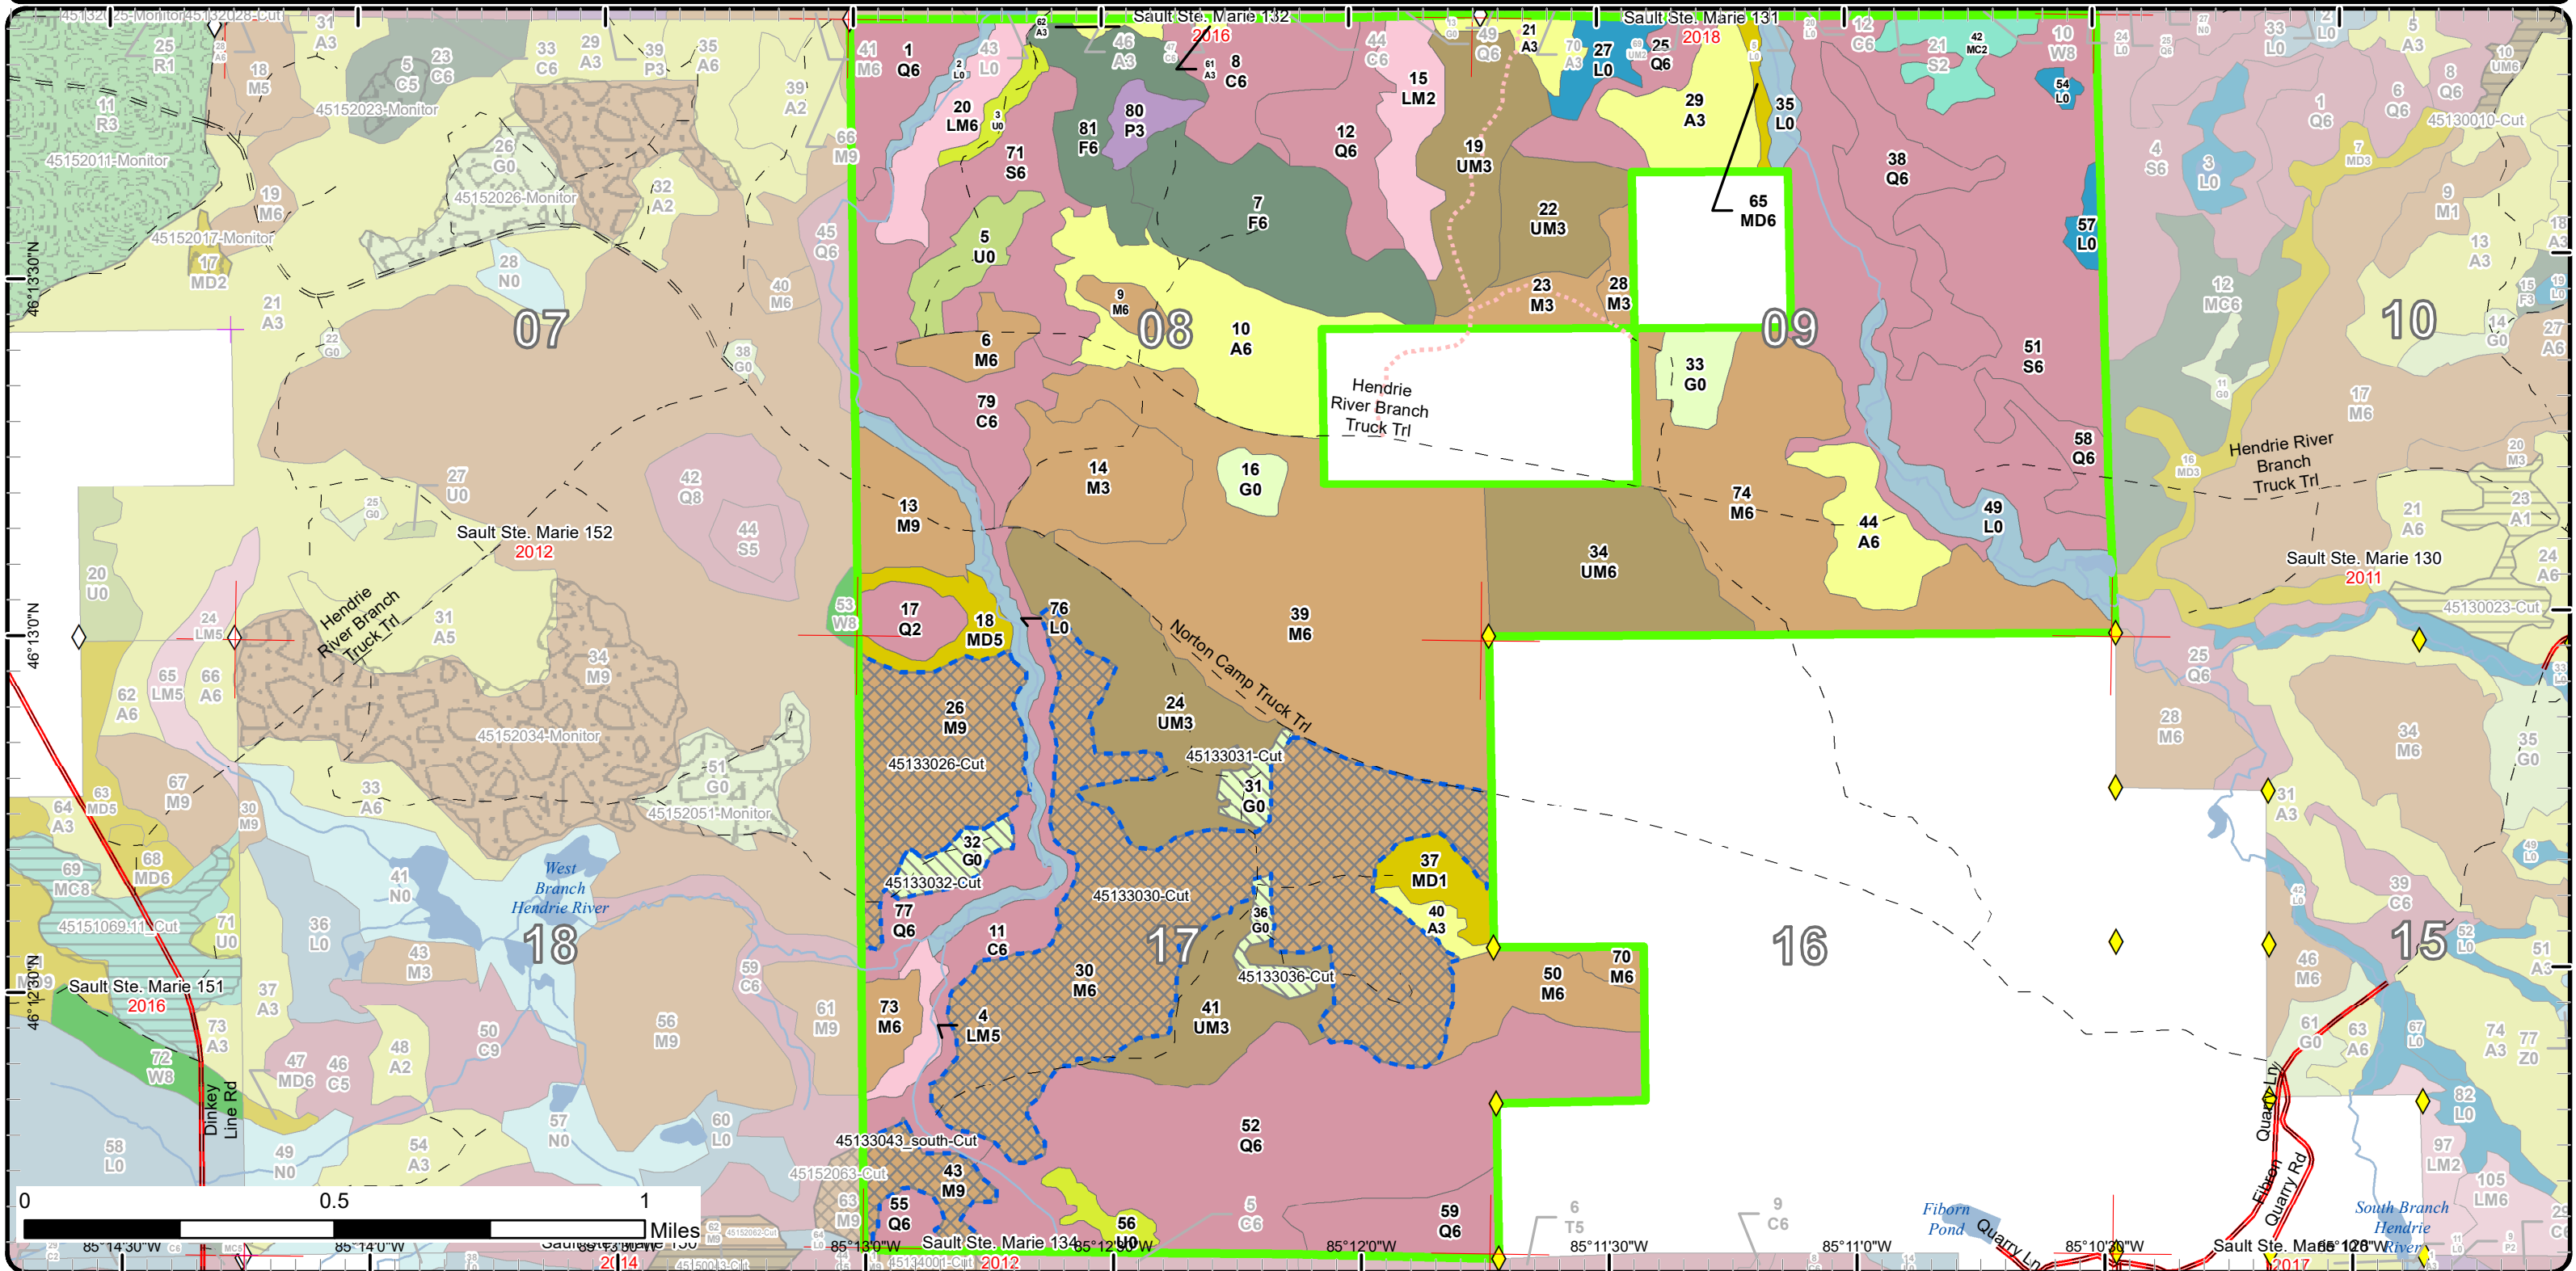

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Treatments:

Acceptable

Regen:

Other

Comment: Need to put road and bridge from the east across west branch of Hendrie River to access the stand. Should be cut with stands 56 and 63. Care must be taken to prevent erosion and problems from the bridge and road placements on and around the trout streams. Old next step comments: Follow-up treatment with a regeneration survey as per the work instructions. Acceptable regeneration is maple, cherry, beech, paper and yellow birch, balsam fir, spruce, aspen and hemlock.

Proposed Start Date: 10/01/2021

Total Treatment Acreage Proposed: 262.4

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

Conservation Area	Type	Description
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.
SCA	Habitat Area	An area that provide some specific need for the life cycle of wildlife species, including State Wildlife Areas and Waterfowl Production Areas, deer wintering complexes in lowland conifer communities, grassland openings and savannas. Habitat areas are distinct from critical habitat designated for recovery of endangered or threatened species (such as Kirtland's warbler or piping plover areas) in that they are more general in nature, are not primarily associated with threatened or endangered species, and are not covered by species recovery plans that are developed in cooperation with Federal agencies.
SCA	Riparian Area	A transitional area between aquatic and terrestrial ecosystems in which the terrestrial ecosystem influences the aquatic ecosystem and vice-versa. Because of the unique conditions adjacent to lakes, streams and open water wetlands, riparian areas harbor a high diversity of plants and wildlife. Riparian communities are ecologically and socially significant in their effects on water quality and quantity, as well as aesthetics, habitat, bank stability, timber production, and their contribution to overall biodiversity.
ERA	Ecological Reference Areas	Ecological Reference Areas (ERAs) are high quality examples of natural communities that have been identified as Element Occurrences (EOs) by the Michigan Natural Features Inventory (MNFI) within the context of their natural community classification system. Element Occurrences with viability ranks of A (Excellent) or B (Good) and a Global (G) or State (S) element (rarity) ranking of endangered (1), threatened (2), or rare (3) serve as an initial base of ERAs. They may be located upon any ownership in the State. The system is comprised of individual or associations of natural community types that are managed for restoration and maintenance of natural ecological processes and values. The public may submit recommendations for lands as ERAs using the DNR Conservation Area Recommendation Form.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	General Comments:
1	6128 - Lowland Coniferous, Mixed Deciduous	Poletimber Well	20.4	99	81-110	Smaller diameter fringe stand. Variable low ground with some areas of higher with mixed conifer and deciduous. Check in next entry for possible harvest.
4	6132 - Mixed Lowland Forest with Cedar	Poletimber Medium	6.7	35	51-80	Transition between upland stand and lower river corridor. Mix of everything, but small diameter and tag alder mixed in where lowest.
6	4112 - Maple, Beech, Cherry Association	Poletimber Well	10.3	72	81-110	Stand thinned as part of "Mystery Skull". Overall basal area still relatively in regulation, avg. About 90. Let go until next entry.
7	42330 - Upland Fir	Poletimber Well	53.2	28	Immature	Clear cut in 1989. Stand is mostly balsam & spruce with some aspen, cherry. Some Hemlock patches and scattered trees.
8	6120 - Lowland Cedar	Poletimber Well	27.6	99	141-170	Poor quality stand of cedar, balsam, and black spruce. There is a small presence of p. birch.
9	4112 - Maple, Beech, Cherry Association	Poletimber Well	5.3	65	81-110	Stand thinned as "Mystery Skull". Basal area is lower in this stand in comparison to others adjacent. Averages about 90 basal area. Lost the beech component from BBD. Leave this stand and check it again in 10 years.
10	4134 - Aspen, Spruce/Fir	Poletimber Well	53.4	34	141-170	Aspen/ balsam fir. Cut in 1984. Good looking stand. Check next entry for possible harvest.
11	6120 - Lowland Cedar	Poletimber Well	38.3	98		Hendrie River corridor. Dense mixed cedar-Q type.
12	6128 - Lowland Coniferous, Mixed Deciduous	Poletimber Well	24.3	80	81-110	Very wet stand of poor quality cedar and spruce. Some tamarack in places. A few areas of aspen and birch where slightly higher.
13	4119 - Mixed Northern Hardwoods	Sawtimber Well	21.2	71	81-110	Thinned as part of "Cherry Seed Hardwood" sale. still lower ba, about 90-100. check in 10 years.
14	4110 - Sugar Maple Association	Sapling Well	32.9	30	Immature	Opening that is nearly fully stocked with Cherry, but w/ some balsam and spruce.
15	6130 - Fir, Aspen, Maple	Sapling Medium	20.3	5	Immature	Cut in 2011
17	6124 - Lowland Spruce-Fir	Sapling Medium	10.5	45		Very Wet. Poor site, but is stocked with Spruce, Tamarack, Balsam, and some W. Pine. Old filled on bog.
18	4191 - Mixed Upland Deciduous with Conifer	Poletimber Medium	11.4	37	51-80	W.P. left after 80-82 cc. Filling in with Mr, balsam, and cherry brush
19	4319 - Mixed Upland Forest	Sapling Well	35.8	26	Immature	

Report 7 – Forested Stands

Compartment: 133
Year of Entry: 2019

Stand	Sault Ste. Marie Mgt. Unit		Report 7 – Forested Stands			Compartment: 133 Year of Entry: 2019
	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	General Comments:
20	6139 - Mixed Lowland Forest	Poletimber Well	17.3	25	141-170	Absolute mixed stand of species and high/low ground. Partial ridge runs length. Small diameters and brushy. A few scattered White Pine. Lowland conifers in wet holes.
21	4134 - Aspen, Spruce/Fir	Sapling Well	8.3	15	Immature	Stand was cut in 2002. Mystery Skull. 45-006-01-01
22	4319 - Mixed Upland Forest	Sapling Well	22.2	26	Immature	
23	4116 - Mixed N. Hardwood - Aspen	Sapling Well	12.2	33	Immature	Poor hardwood brush
24	4319 - Mixed Upland Forest	Sapling Well	54.4	26	81-110	
25	6124 - Lowland Spruce-Fir	Poletimber Well	16.4	81	141-170	
26	4110 - Sugar Maple Association	Sawtimber Well	52.1	65	81-110	Thinned as part of "Cherry Seed" 45128-99-01. Good looking Hard maple, ready to thin this entry.
28	4116 - Mixed N. Hardwood - Aspen	Sapling Well	5.7	33	Immature	Poor hardwood brush
29	4130 - Aspen	Sapling Well	23.9	15	Immature	Cut in 20 Mystery Skull 45-006-01-01. Good looking aspen mix regeneration.
30	4112 - Maple, Beech, Cherry Association	Poletimber Well	176.2	85	111-140	Thinned as part of "Mystery Skull" sale. This stand varies across its area. Some areas with lower basal area from Beech dropping out. Basal area is not super high, but a thinning wouldn't hurt. Promote the mast producing species and do not cut any Hemlock.
34	4319 - Mixed Upland Forest	Poletimber Well	54.8	30	Immature	Small diameter mix of everything.
37	4191 - Mixed Upland Deciduous with Conifer	Sapling Poor	11.6	20	Immature	Grass opening with lots of cherry brush.
38	6128 - Lowland Coniferous, Mixed Deciduous	Poletimber Well	32.1	55	81-110	Mix along River corridor. Poor quality stems of Mr, P. Birch, Balsam mixed in with cedar and black spruce.
39	4112 - Maple, Beech, Cherry Association	Poletimber Well	163.2	75	81-110	Thinned as part of "Mystery Skull" 45-106-00-01. Stand was thinned same time as the adjacent stand to the south. The diameters are a little larger in this stand and the basal area is overall still within regulation. There appears to have been more beech in this stand than the adjacent and there are many areas of lower ba due to beech dropping out of the canopy. Hold for this entry and check it for thinning in 10 years.
40	4134 - Aspen, Spruce/Fir	Sapling Well	4.8	25	81-110	Brushy part of adjacent opening.

Report 7 – Forested Stands

Compartment: 133
Year of Entry: 2019

S t a n d	Sault Ste. Marie Mgt. Unit		Report 7 – Forested Stands			Compartment: 133 Year of Entry: 2019
	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	General Comments:
41	4319 - Mixed Upland Forest	Sapling Well	31.3	25	Immature	Stand of mixed cherry, balsam, Mr brush
42	429 - Mixed Upland Conifers	Sapling Medium	13.2	17	Immature	Part of "Dan's Moose Block" sale. Mostly aspen regen with scattered W.P.
43	4115 - Y.Birch, Hemlock NH	Sawtimber Well	14.5	80	111-140	Stand still has a raptor nest, but it does not appear active. Thin stand to regulation, but favor Hemlock and Yellow Birch as reserve. Mostly red maple, but some areas with decent sugar. Bridge needed for access at same crossing location as sale in adjacent stand.
44	4134 - Aspen, Spruce/Fir	Poletimber Well	21.6	33	111-140	Nice stand of aspen. Very dense will be nice in 10-20 years. Was cut in 1984. Healthy aspen, check next entry.
50	4119 - Mixed Northern Hardwoods	Poletimber Well	21.8	70	111-140	Stand is under special use permit to Mich. karst Conservancy due to cave openings being in the stand. No management in this unique area.
51	6122 - Black Spruce	Poletimber Well	173.9	34	141-170	Was cut in the 80's basically a treed bog/ wetland. Almost pure black spruce with very large wp left as a widely scattered overstory.
52	6124 - Lowland Spruce-Fir	Poletimber Well	151.1	60	141-170	Variable stand. Mix of species, heavier of each in different places. Only possible management would be in Northern most tip near cave entrances to east.
55	6128 - Lowland Coniferous, Mixed Deciduous	Poletimber Well	6.1	35	81-110	Small diameter pole of mixed conifer nada some deciduous. Scattered large white pine. Ground is much lower and wet compared to adjacent hardwood stand.
58	6124 - Lowland Spruce-Fir	Poletimber Well	12.3	89	51-80	Very wet, dense cedar / black spruce.
59	6129 - Mixed Coniferous Lowland Forest	Poletimber Well	21.1	66	111-140	Tamarack/Cedar mix.
61	4134 - Aspen, Spruce/Fir	Sapling Well	0.8	9	Immature	Stand was cut in 2008. Aspen regeneration with mix of spruce and balsam. A few residual overstory white pine.
62	4134 - Aspen, Spruce/Fir	Sapling Well	2.2	9	Immature	Stand was cut in 2008. Aspen regeneration with mix of spruce and balsam. A few residual overstory white pine.
65	4191 - Mixed Upland Deciduous with Conifer	Poletimber Well	3.4	61	51-80	Sliver stand along edge of drainage corridor.
70	4115 - Y.Birch, Hemlock NH	Poletimber Well	4.1	70	111-140	Stand is under special use permit to Mich. karst Conservancy due to cave opening being in the stand. No management in this unique area.
71	6122 - Black Spruce	Poletimber Well	37.2	70	141-170	Small size wetland spruce with some wp. Not very big, looks good. No sign of SBW.
