Shingleton Forest Management Unit

Compartment 41060

Entry Year 2019

Acreage: 1,370

County Schoolcraft

Management Area: Hiawatha Moraine

Revision Date: 2017-08-10

Stand Examiner: Tori Irving

Legal Description:

T43N R15W Sections 19, 30 & 31

Identified Planning Goals:

The goals in this compartment include conducting multiple resource management for current and future generations. Forest Health, Recreation, Biodiversity Stewardship, Wildlife and Timber Management are some of the key management components within this compartment.

Soil and topography:

The soils in Schoolcraft County have recently been re-mapped by the Soil Survey. Specific soils information including Habitat Types can be found in the individual stand comments. In general, the soils are well drained sands. The terrain in the area is relatively flat. The Eastern Upper Peninsula Eco-Regional Planning Process is using a Management Area Concept to manage on a broader scale and Land Type Associations (LTA's) are key components to defining the soils and topography within the Management Areas. This entire compartment lies within the Hiawatha Moraine LTA.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

The compartment is entirely contiguous State land. There is little development within the compartment, however; due to the upland ground and easy access to the area, it does receive a good amount of public use.

Unique Natural Features:

Currently under review by Michigan Natural Features Inventory (MNFI).

Archeological, Historical, and Cultural Features:

Refer to HAL report.

Special Management Designations or Considerations:

A portion of Section 31 is part of a Sharptail Grouse Corridor which is managed both commercially and non-commercially to maintain the area in an open style habitat which the birds need to survive.

Watershed and Fisheries Considerations:

None.

Wildlife Habitat Considerations:

This compartment lies on the north end of the High Rollways complex. Pre-settlement data show hemlock, sugar maple, white pine and birch dominated the forest within the compartment. Current forest conditions are substantially different from the circa 1850 forests. Pine plantations with a mixture of aspen now dominate the compartment. The wildlife habitat management regime is primarily associated with maintaining early successional forests and developing age structural diversity between pine plantations.

Mineral Resource and Development Concerns and/or Restrictions

Gravel pits are located one mile to the west and there could be some sand and gravel potential within the compartment. There is no known metallic mineral potential in this region. There is no commercial oil and gas production in the UP.

Vehicle Access:

The compartment has excellent access including the High Rollways Truck Trail which is a County Road.

Survey Needs:

None needed at this time.

Recreational Facilities and Opportunities:

The compartment does not have any recreational facilities. The area gets a lot of recreational users including hunters, birdwatchers, blueberry pickers, ORV users, and snowmobilers.

Fire Protection:

The area has numerous roads which will aid in suppression efforts if a fire were to occur. There is an increased potential for slash fires since so much of the pine is being harvested. In general, the Sharptail Corridor has been managed through fire, therefore most of the fuel has been removed which lessens the chance for a large fire to occur.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

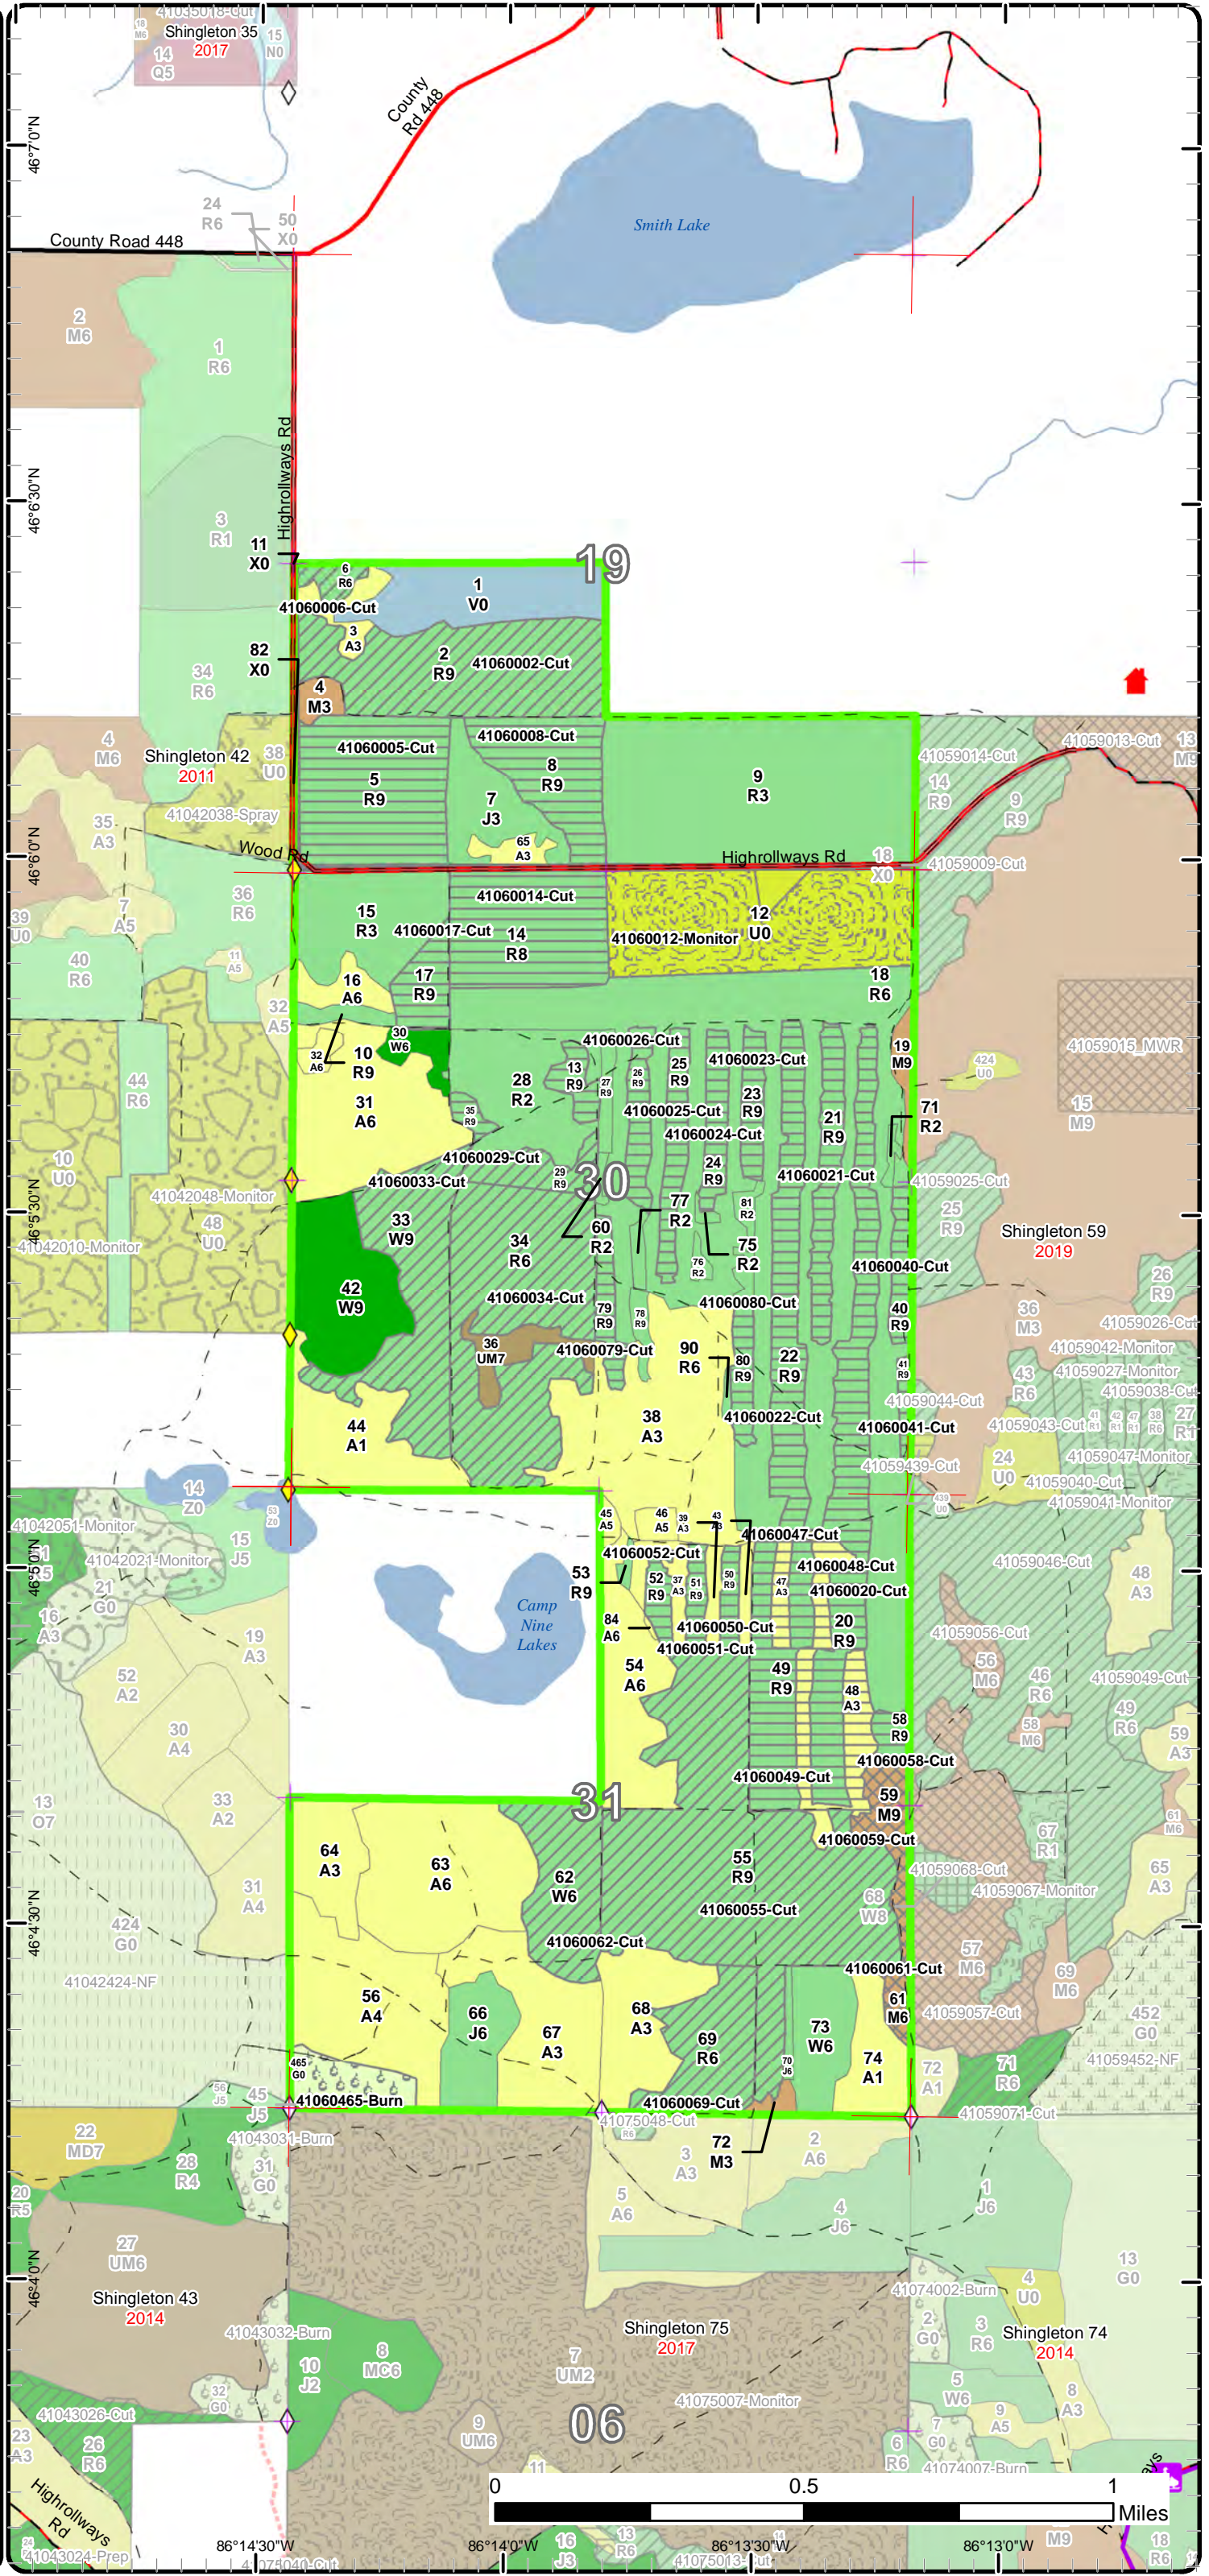

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres

Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
HCVA = High Conservation Value Area
SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Habitat Area	An area that provide some specific need for the life cycle of wildlife species, including State Wildlife Areas and Waterfowl Production Areas, deer wintering complexes in lowland conifer communities, grassland openings and savannas. Habitat areas are distinct from critical habitat designated for recovery of endangered or threatened species (such as Kirtland's warbler or piping plover areas) in that they are more general in nature, are not primarily associated with threatened or endangered species, and are not covered by species recovery plans that are developed in cooperation with Federal agencies.
