

## North Branch Carp River At Kenneth Road

---

### ***Fish Species***

Brook Trout; Steelhead

### ***Species Description***

This part of the river has wild brook trout up to 12 inches, steelhead (juveniles to 8 inches and adults) and coho salmon.

### ***Geographic Coordinates***

Lat:46.10048 / Long:-84.85249

### ***Noteworthy***

This section of the North Branch Carp has unique geology, with areas of bedrock, boulders and gravel. Although it has the traditional trout season regulations, adult steelhead are sometimes still present when the season opens in the spring. Brook trout are also present. Water levels are variable depending on rain/snowmelt, as there is very little groundwater here. Fly fishing is difficult due to overhanging tag alders.

### ***Fishing Regulations***

This is a Type 1 Trout Stream. For more information, please refer to the Inland Trout & Salmon Regulations found in the current Michigan Fishing Guide.

### ***Directions to Site***

From M-123 south of Trout Lake, take Kenneth Road east 4.3 miles to the stream crossing. Parking is along the road shoulder.
