*Abstract.*—Legislation enacted in 1992 by the State of Michigan requires all charter boat operators to report sportfishing catch and effort to the Michigan Department of Natural Resources. The objective of the catch and activity reporting system is to obtain a continuous annual record of the number, type, and location of fish harvested by charter boat clients in Michigan.

Ninety-seven percent of the 784 charter fishing operators complied with the law by returning their completed catch reporting forms in 1992. These operators reported making 16,447 charter fishing excursions during April through October. The total number of charter excursions decreased by 3,492 (-18%) in 1992 compared to 1991. Over 440,000 angler hours were spent fishing by some 71,000 charter clients. The distribution of charter fishing excursions was: 67% Lake Michigan, 15% Lake Huron, 10% Lake Erie, 5% Lake Superior, and 3% Lake St. Clair. Over 199,000 fish were reported harvested. The harvest was composed of about 68,000 yellow perch, 40,000 walleye, 33,000 lake trout, 20,000 rainbow trout, 19,000 chinook salmon, 11,000 coho salmon, and 1,500 brown trout. The numbers of fish harvested in all species categories declined in 1992 compared to 1991, except for walleye.

Michigan's charter boat industry has grown from 250 operations in 1979 to nearly 900 in 1992. Approximately 800 of these charter boats are used for sport fishing excursions on Michigan's Great Lakes waters. The charter fishing industry provides the State of Michigan each year with significant economic benefits. For example, 239,000 clients spent an estimated \$21 million in addition to charter fees in 1985, and the total statewide investment by charter boat firms in

the same year was estimated to exceed \$30 million (Mahoney et al. 1986).

The Michigan Legislature in 1992 passed Act 115, Public Acts of 1992. This legislation re-authorized and strengthened the law, first enacted during 1989 (Act 22, Public Acts of 1989), which required the reporting of sport catch and effort by the charter fishing industry. The legislation was supported by both Michigan Charter Boat Association (MCBA), an industry representative, and Michigan

Department of Natural Resources (MDNR). Among other provisions, the new law provides more stringent penalties for charter fishing operators who are delinquent by more than 60 days with their catch reports. Also, the new law requires that all operators maintain on board an up to date daily log of their catch and fishing activity.

The objective of the catch reporting system is to obtain a continuous annual record of fishing effort and the number, type, and location of fish harvested by charter boat anglers in Michigan. These data will aid MDNR's Great Lakes fishery management efforts by providing valuable trend information about charter harvest and catch rates, which reflect the status of fish stocks important to the industry. The data will also allow MCBA to monitor the health and welfare of its industry.

### **Methods**

The Michigan Charter Boat Daily Catch Report form was developed in 1989 by a committee made up of two members each from MDNR and MCBA (Figure 1). Forms and grid maps of the Great Lakes were mailed to 784 known charter operators during March 1992. Charter operators were identified from previous years' lists of reporting operators. Charter operators who used their vessels for fishing were informed that they were required by law to complete the form each time they fished. A form was to be mailed by the tenth of each month to MDNR's Charlevoix Fisheries Station.

The data form requires the following information: an assigned identification number for each charter boat, lake, date fished, port, grid, hours fished, number of resident and nonresident anglers, catch (number) of major species, and number of sea lamprey seen attached to chinook salmon or lake trout. Space was also provided on the form for comments or observations.

Completed data forms returned to Charlevoix Fisheries Station were logged, coded by port fished, and entered on computer. Incomplete forms were logged then returned to

the charter operator with a letter stating why the report was returned.

Each month (June through October), post-card notices were sent to charter operators who had not filed a report for the previous month. Two notices were sent each month, the first after an operator was delinquent for 10 days, and the second after 30 days.

In November 1992, operators who had not filed reports for one or more months during the period May through September were sent letters via certified mail. These letters informed the operator that this would be the last notice he or she would receive. If the recipient did not respond in writing within 14 days of receipt of this notice, his or her name was submitted to MDNR's Law Enforcement Division recommending non-issuance of an inspection certificate for the 1993 season.

Three measures of fishing effort were summarized: angler hours, angler trips, and charter excursions. Angler hours were based upon total hours fished (dock to dock) by each angler. An angler trip was one completed fishing outing by one individual. A charter excursion was one completed boat trip. For example, if a charter operator took four anglers fishing for 6 hours, total fishing effort would be 24 angler hours, 4 angler trips, and 1 charter excursion. Tables summarizing catch and effort for selected ports around the Great Lakes are contained in the appendices.

Data regarding number of sea lamprey observed by charter operators were collected at request of the U.S. Fish and Wildlife Service's (USFWS) Sea Lamprey Control Station at Marquette, Michigan. These data will be used by USFWS as an index of sea lamprey abundance.

### **Results**

#### *Compliance*

During the 1992 fishing season, an average of 58% of all charter boat operators complied with the law by submitting their catch reports by the due date, while 76% submitted reports within 30 days of the due date.

Monthly rate of compliance in 1992 was 9% less than in 1991. By the end of the 1992 season, 97% of all charter operators had complied with the law. Final compliance rate for 1992 was the same as 1991 (Rakoczy 1992).

### *Catch and effort*

Charter operators submitted reports on 16,447 charter excursions during April through October, 1992 on lakes Michigan, Huron, Erie, Superior and St. Clair (Tables 1 through 5). The total number of charter excursions in 1992 decreased by 3,492 (-18%) compared to 1991 (Rakoczy 1992). Decreases in the number of charter excursions in 1992 as compared to 1991 occurred on lakes Michigan (-19%), Huron (-27%), Superior (-6%), and St. Clair (-21%). Lake Erie was the only lake in 1992 for which the number of charter excursions increased (+16%) compared to 1991. The distribution of charter fishing effort (excursions) by lake was: 67% Lake Michigan, 15% Lake Huron, 10% Lake Erie, 5% Lake Superior, and 3% Lake St. Clair. The distribution of charter fishing effort by lake in 1992 was very similar to 1991.

A total of 440,406 hours were spent fishing by 71,298 charter anglers in Michigan's waters and tributaries of the Great Lakes. The total number of charter anglers in 1992 decreased by 17,109 (-19%) compared to 1991. Lake Erie was the only lake which had more charter anglers in 1992 than the previous year (+17%). Thirty-two percent of all charter clients were not residents of Michigan. Lake Superior charter operators had the greatest percentage of nonresident clients (54%; Table 4), while Lake St. Clair charter captains had the lowest percentage (2%; Table 5).

A total of 199,000 fish were reported harvested in all lakes. Lake Michigan accounted for 58% of all fish harvested, while lakes Erie and Huron accounted for 27% and 7%, respectively, of the total harvest. The most numerous species in the harvest was yellow perch (68,300) which accounted for 34% of the total harvest. Numbers of other

species harvested were: 39,800 walleye (20%), 33,000 lake trout (17%), 20,400 rainbow trout (10%), 18,500 chinook salmon (9%), 10,800 coho salmon (5%), and 1,500 brown trout (1%). The "other" species category was 4% of the total reported catch. Since other species are not identified on the catch reporting form, the actual composition of this category is unknown.

Numbers of fish harvested in all species categories declined in 1992 compared to 1991, except for walleye. This was due to a decline in fishing effort on most lakes. Total walleye harvest increased by 6,000 fish (+18%) during 1992 compared to 1991. This was due to an increased catch of walleye on Lake Erie (+38%). The greatest changes in the charter catch by species in 1992 compared to 1991 occurred for brown trout (-56%), chinook salmon (-42%), lake trout (-29%), and rainbow trout (-29%). Decreasing harvest by Lake Michigan charter anglers accounted for most of this change, as they harvested 2,000 fewer brown trout, 12,000 fewer chinook salmon, 10,400 fewer lake trout, and 8,100 fewer rainbow trout than 1991.

Catch rates (fish per 100 angler hours) by Lake Michigan charter anglers in 1992 compared to 1991 increased for coho salmon (+21%) (Table 6). Catch rates decreased for chinook salmon (-30%), rainbow trout (-10%), brown trout (-50%), lake trout (-13%), and yellow perch (-14%) in 1992 compared to the previous year. Many Lake Michigan charter captains commented that their fishing success and bookings were down in 1992 as a result of unusually cold weather, especially during the spring months. On Lake Huron, catch rates increased for rainbow (+17%) and brown trout (+250%) compared to 1991; however, the rate of catch for these two species was still relatively minor. Catch rates decreased in Lake Huron for lake trout (-16%) and yellow perch (-15%) in 1992 compared to 1991, while rates for chinook and coho salmon were unchanged. Lake trout are the most important salmonine in the charter catch from Lake Superior. Catch rates for lake trout on Lake Superior have been virtually unchanged during the past three seasons.

Walleyes play an important role in charter fisheries on lakes Erie, Huron, and St. Clair. Catch rates for walleyes by charter clients increased in 1992 on Lake Erie by 25%, but decreased on lakes Huron (-6%) and St. Clair (-39%) compared to 1991 (Table 6). Catch rates for walleye on Lake St. Clair have decreased during each of the past two years. Many Lake St. Clair charter captains have expressed their displeasure with condition of the walleye fishery during 1991-92 in the comments section of their reports.

The greatest catch per charter excursion for most species of salmon and trout occurred at Lake Michigan ports (Table 7). Charter anglers at New Buffalo, Leland, and Ludington had the greatest catch per excursion on the Great Lakes for coho salmon (2.9), chinook salmon (4.9), and rainbow trout (3.8), respectively. Lake Huron charter anglers fishing out of Alpena had the best catch rate (1.5 fish per excursion) for brown trout. The greatest catch rate for lake trout (13.5 per excursion) occurred at Ontonagon, Lake Superior. Lake Michigan charter clients at

South Haven had the greatest catch rate for yellow perch (64.8 per excursion). The best catch per excursion for walleye (20.3) was noted for charter anglers at Monroe, Lake Erie.

As has been the case in previous years (1990-91), numbers of sea lamprey attached to chinook salmon and lake trout, were much higher on Lake Huron than the other Great Lakes (Table 8). Numbers of sea lamprey attached per 100 lake trout harvested from Lake Huron in 1992 was 4.6 as compared to 0.8 for lakes Michigan and Superior. Charter captains also reported 13.6 lamprey per 100 chinook salmon harvested on Lake Huron during 1992 as compared to 0.2 for Lake Michigan and none for Lake Superior.
