**TREATMENT AREA DETAILS****12145071-Cut****PRESCRIPTIONS SPECIFICATIONS:**

Harvest merchantable trees to promote aspen and conifer regeneration. Retention should include a diverse mix of species and large diameter, forked crown aspen. Leave all conifer, oak, and yellow birch if present. Mark to leave at least one black cherry or paper birch per acre if present.

**OTHER COMMENTS:**

Approximate retention areas are mapped (15% retention). This includes low ground, conifer, and a good representation of the original stand. Do not push lines into adjacent cedar stand. Winter cutting spec for deer wintering area.

**NEXT STEP TREATMENTS:**

Monitoring, Natural Regen (Re-Inventory), Monitor for regeneration., 100%, Required

**ACCEPTABLE REGENERATION:**

Any combination of the original stands overstory species prior to harvest.

**12145060-Cut****PRESCRIPTIONS SPECIFICATIONS:**

Harvest merchantable trees to promote aspen and conifer regeneration. Retention should include a diverse mix of species and large diameter, forked crown aspen. Exclude any vernal pond areas if found within. Leave cedar, pine, oak, and yellow birch. Mark to leave approximately one paper birch or black cherry per acre if present.

**OTHER COMMENTS:**

Stand retention will be determined during field prep and could include vernal ponds, buffers, and/or difficult terrain areas. Winter cutting spec for deer wintering area.

**NEXT STEP TREATMENTS:**

Monitoring, Natural Regen (Re-Inventory), Monitor for regeneration., 100%, Required

**ACCEPTABLE REGENERATION:**

Any combination of the original stands overstory species prior to harvest.

**12145008-Cut****PRESCRIPTIONS SPECIFICATIONS:**

Harvest merchantable trees to promote aspen and conifer regeneration. Retention should include a diverse mix of species and large diameter, forked crown aspen. Leave all conifer, oak, birch and black cherry if present.

**OTHER COMMENTS:**

Exclude and/or appropriately buffer to keep tops out of any low depressions within the stand, approximate areas have been excluded from this treatment. These exclusions will fit criteria towards long term retention, create additional patch retention within stand if needed to meet guidelines. Winter cutting spec for deer wintering area.

**NEXT STEP TREATMENTS:**

Monitoring, Natural Regen (Re-Inventory), Monitor for regeneration., 100%, Required

**ACCEPTABLE REGENERATION:**

Any combination of the original stands overstory species prior to harvest.

**12145003-Cut****PRESCRIPTIONS SPECIFICATIONS:**

Mark stand to 80 - 100 BA. Focus on improving quality, releasing northern hardwood crop trees, and removing a majority of the aspen component while leaving enough canopy cover to discourage aspen regeneration success. Leave some large future snag trees for wildlife. Leave all conifer and oak. Leave most birch and black cherry while marking unless needed for operability. Favor species diversity while marking.

**OTHER COMMENTS:**

Important to maintain target BA with consistent canopy cover across stand. Do not create large gaps. Goal is to discourage aspen regeneration to move this stand to a more pure northern hardwood mix. Winter cutting spec for deer wintering area.

**NEXT STEP TREATMENTS:**

Monitoring, Natural Regen (Re-Inventory), Monitor for northern hardwood regeneration. Marked to discourage aspen regeneration success., 100%, Required

## ACCEPTABLE REGENERATION:

Any combination of the original stands overstory species prior to harvest.

**12145005-Cut**

## PRESCRIPTIONS SPECIFICATIONS:

Mark stand to 70 - 90 BA. Focus on improving quality, releasing crop trees, and re-open or create canopy gaps to encourage northern hardwood regeneration. Leave some large future snag trees for wildlife. Leave all conifer and oak. Leave most birch and black cherry while marking unless needed for operability. Favor species diversity while marking.

## OTHER COMMENTS:

Do not push lines where lower targeted BA from past harvest was met at approximately 80 BA. Winter cutting spec for deer wintering area.

## NEXT STEP TREATMENTS:

Monitoring, Natural Regen (Re-Inventory), Monitor for northern hardwood regeneration., 100%, Required

## ACCEPTABLE REGENERATION:

Any combination of the original stands overstory species prior to harvest.

PROPOSAL REPORT NOTES

SALE NOTE (The sale note prints on the prospectus cover sheet and the Timber Sale information page. It is limited to 1,000 characters.)

**Sale Specific Conditions & Requirements****Sale Name: Pothole Pulp****Sale Number: 12-051-26 Seq#: 1****1 - Sale Area****1.2 - Boundaries****1.2.1 - Painted Boundaries (9/19)**

The sale boundary and Payment Unit boundaries are marked and identified by blue, red and yellow paint. Exterior sale boundary lines against private property are marked with blue paint. Exterior sale boundary lines against state are marked with red paint. Interior Payment Unit boundaries are marked with yellow paint. Retention patches are marked with red paint; no harvesting activities may occur within these areas. The painted boundary line trees are not Included Timber and are to be protected unless marked with orange paint. Yellow painted trees designating an interior Payment Unit boundary are only to be cut when all surrounding Payment Units have been paid.

**2 - Timber Specifications****2.1 - Included Timber****2.1.2 - Clearcut Unit(s) w/o Unmerchantable Trees (8/11)**

Within Payment Unit(s) 5, 6, and 7, cut all trees which meet minimum piece specifications in 2.2 Utilization, except all conifer, oak, birch, and black cherry.

**2.1.3 - Cut Tree Marked Unit(s) (12/08)**

Within Payment Unit(s) 8 and 9, all trees are designated for cutting when marked with orange paint above and below stump height, regardless of merchantability.

**2.1.7 - Leave Tree Marked Unit(s) (6/14)**

Within Payment Unit(s) 1, 2, 3, and 4, all trees, which meet minimum piece specifications in 2.2 Utilization, are designated for cutting except cedar, oak, yellow birch, and trees marked with green paint above and below stump height.

In addition, within:

Payment Units 1 and 2, leave all conifer.

Payment Units 3 and 4, leave all red pine and white pine.

**2.2 - Utilization****2.2.6 - Roundwood Operation Required (3/21)**

The skidding of whole trees or tree segments with limbs attached is prohibited within Payment Units 8 and 9. All products must be produced as roundwood and forwarded to existing roads or landing areas in final product length. Trees must be harvested with in-woods processor (feller bunching harvester will not be allowed) in order to retain existing understory.

**3 - Payments****3.4 - Damaged Timber****3.4.1 - Damaged Timber (12/24)**

General Condition and Requirement 3.4 Damaged Timber, defines liquidated damages for undesignated live merchantable trees which are cut or injured. In addition, extreme care should be taken to avoid damage to tree seedlings and saplings. No damage is acceptable to undesignated live merchantable trees. Within the Sale Area, if more than 5 % of trees (> 4.5" DBH) within a specified area of the sale are damaged, liquidated damages will be assessed for all trees damaged. Rates will be in accordance with General Condition and Requirement 3.4 Damaged Timber.

## 4 - Transportation

### 4.1 - Construction

#### 4.1.4 - Timber Removed for Construction (3/23)

Trees cut or damaged in the process of pre-approved road, landing, or skid trail construction will be decked in an area separate from other Designated Timber and not removed until measured by the Sale Administrator. Payment will be made at contract prices or average prices, if not on the contract.

#### 4.1.6 - Road Construction (4/24)

Construction of new roads or improvements of existing roads shall be done in such a way as to minimize the environmental and visual impacts. Merchantable trees shall be cut and utilized unless otherwise directed.

Non-merchantable trees shall be severed and laid flat on the ground. Slash shall be scattered, not left in windrows, and kept a minimum of 10 feet back from the road edge. Stumps shall be set upright, not left on edge, and be moved at least 10 feet away from the road edge. Disturbed soil shall be feathered into the woods and not left in berms or windrows.

#### 4.1.7 - Road Closure (10/11)

All new roads built into the sale must be blocked to vehicle traffic upon completion of the sale. Overgrown roads that are reopened shall be considered new roads. In general, this will require constructing a four (4') foot high berm of stumps and logs covered with earth. Contact the Sale Administrator for specific details of design and placement.

### 4.2 - Maintenance

#### 4.2.4 - Grading (10/16)

For completion of the sale, state forest roads must be graded. In general, this will require a road grader or bulldozer to shape up the roads after forest products have been hauled off site. This includes cleaning of drainage areas, grading, crowning and filling with gravel, if necessary. The grading equipment to be used must be approved by the Unit Manager or his/her representative.

### 4.4 - Access

#### 4.4.1 - Private property access (3/11)

Permission for access across private land (Verdant / Sage) is the responsibility of the Purchaser.

## 5 - Operations

### 5.2 - Conduct of Operations

#### 5.2.1 - Slash

##### 5.2.1.11 - Slash for Reforestation (3/21)

To facilitate reforestation, Payment Units 1 - 7, shall be left with slash evenly distributed. Bunched tops within the cutting area shall be broken up and scattered. Stumps shall be cut low to the ground. Processing sites shall not be left with a compacted layer of slash; tops from these sites shall be hauled back into the cut area and scattered.

#### 5.2.2 - Hazard Trees/Snags

##### 5.2.2.1 - Den Trees (10/16)

Obvious hollow and/or den trees shall be protected and left standing unless they are a safety hazard.

#### 5.2.3 - Operating Restrictions

##### 5.2.3.3 - Bark Slippage Restriction (3/09)

Within Payment Unit(s) 8 and 9, unless changed by written agreement, cutting and skidding are not permitted during the period of April 15 to July 15. This restriction is because of bark slippage.

**5.2.32 - Decking/Landing Restoration (9/13)**

All decking and landing areas must have the surface area restored to a condition equal to or better than before. This is to ensure the proper regeneration of the stand. Wood debris, chips and "cookies" from trimmings must be removed or scattered away from landing and loading areas and may not be windrowed on the edge.

**5.2.37 - No Decking Areas (12/08)**

No decking is allowed within 50 feet of the county road (Way Dam Road).

**5.2.38 - No Decking Against Live Trees (2/04)**

Cut products may not be decked against unmarked or designated leave trees.

**5.4 - Soil Protection****5.4.1 - Rutting Restriction, General (7/16)**

Operations are to cease immediately if equipment and weather conditions result in rutting of roads and/or skid trails which are 12 inches or greater in depth and 50 feet in length. The Unit Manager or his/her representative may restrict hauling and/or skidding if ruts exceed the specified depth. With the Unit Manager or his/her representative's approval, the Purchaser may return to the area when the risk of rutting has decreased.

**5.4.6 - Wet Area Protection (5/10)**

No harvesting operations, including skidding and felling, are to take place within the vernal pond areas or drainages. When harvesting occurs, there should be no disturbance to the vernal pond depression. All equipment, trees and tops should be kept out of this area. Within 100 feet of the pond, equipment should only be used when the soil is in a dry or frozen condition. Care must be taken by the Purchaser to identify and avoid operating in these areas of the timber sale. All or most of these areas have already been excluded from the timber sale.

**5.8 - Protection of Endangered Species****5.8.5 - Protection of Raptor Nests (3/13)**

All trees with raptor nests will be protected if found during harvesting operations. Notification will be made to the Unit Manager or his/her representative who will notify the Wildlife Biologist so an onsite evaluation and recommendation can be made, if necessary.

**6 - Safety and Fire Prevention****6.2 - Signing****6.2.1 - Road Posting (10/20)**

The Purchaser is responsible for posting and maintaining caution signs on Way Dam Road prior to beginning operations. The road must be posted at appropriate distances from the Sale Area to warn of logging activity and truck traffic. Signs must be removed when harvest operations are suspended or completed. The Purchaser will provide these signs.
