≣ LAYERS

You can add data several ways, by searching within your organization, or thousands of other hosted data sets. Or you can drop in your own gpx, kml or shape-file. If you want to add a shapefile, you need to zip the .shp, .shx, .dbf & the .prj files together and then drop in the zip file.

Map title: My Map

Layout: Letter ANSI A Landscape

Format: PDF

Advanced   Print
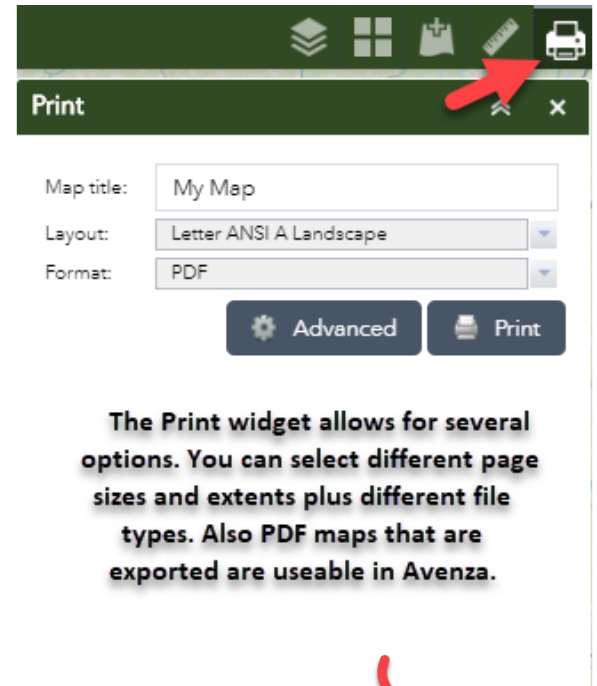

The Print widget allows for several options. You can select different page sizes and extents plus different file types. Also PDF maps that are exported are useable in Avenza.
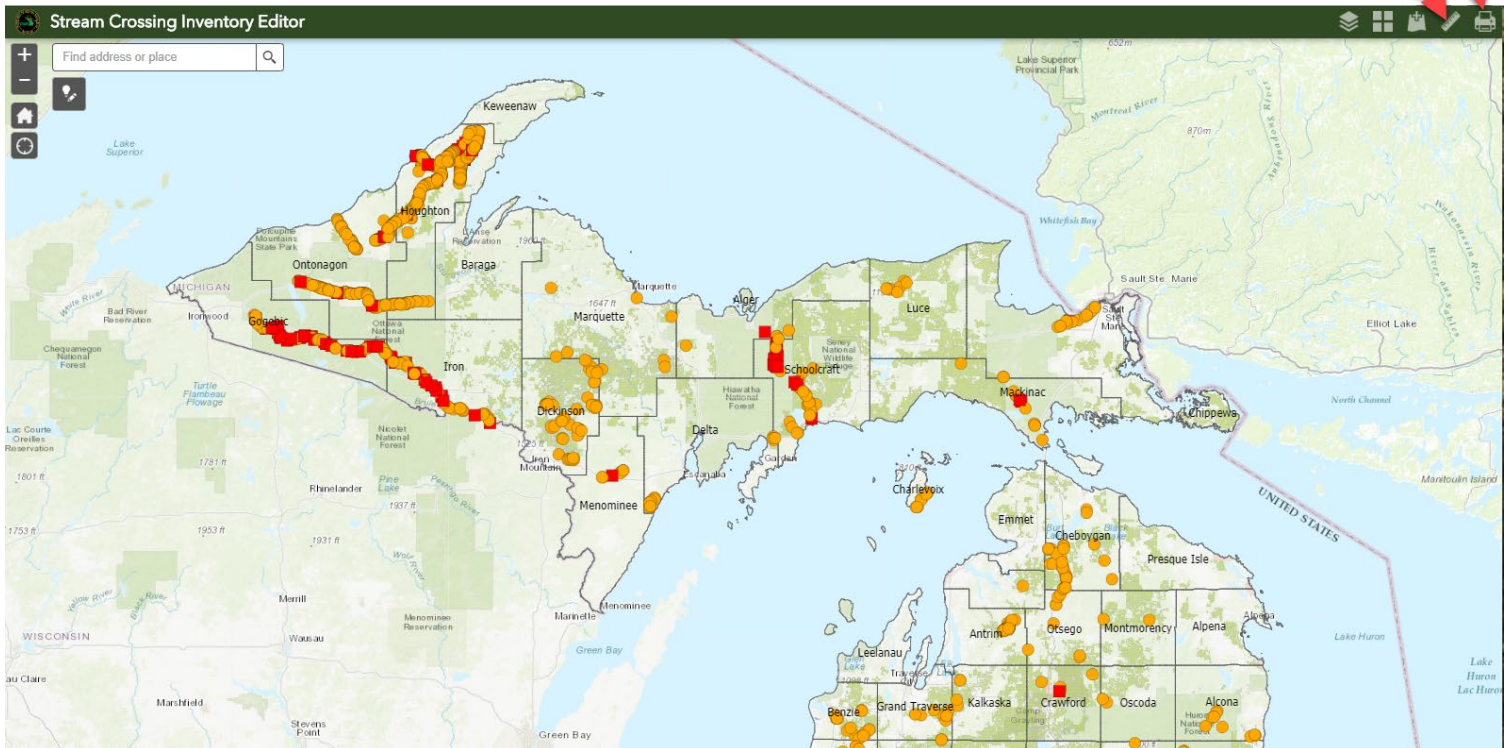

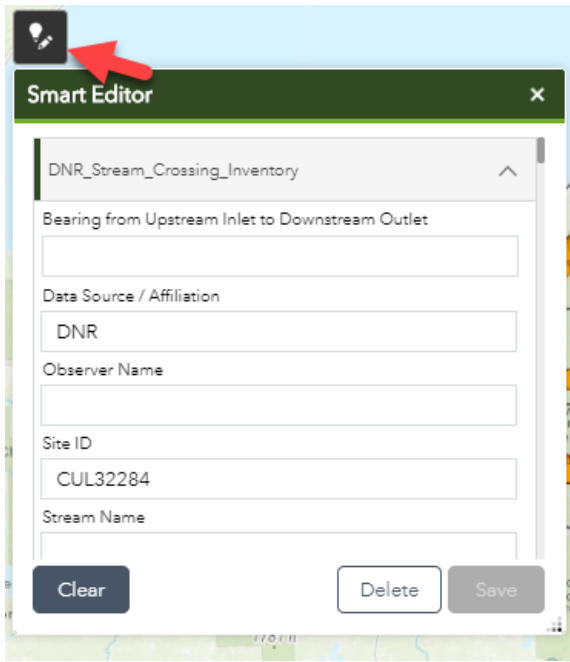

The Edit widget is primarily used for editing fields for a layer. It can be used to create new features, edit existing geometry, and edit attachments. Clear will remove selected feature.
