Atlanta Forest Management Unit

Compartment 54071

Entry Year 2017

Acreage: 1,379

County Montmorency

Management Area: Thunder Bay Outwash

Revision Date: 2015-06-18

Stand Examiner: Darrick Coy

Legal Description:

T32N, R3E, Sec. 19, 20 & 21

Identified Planning Goals:

To provide for the protection, integrated management and responsible use of a healthy, productive, and undiminished forest resource base for the social, recreational, environmental, and economic benefit of the State of Michigan. Harvests prescribed will help balance the age classes of aspen and promote forest health within northern hardwood cover types through salvaging beech from stands infected with beech scale.

Soil and topography:

Topography is flat to mildly rolling. Upland soils are predominantly loamy sands, especially Millersburg. Lowlands are various mucks. The LTA map shows this as a drumlin field— $\frac{1}{2}$ upland, $\frac{1}{2}$ wetland.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

Adjacent land is mostly other state land. There are a few hunting and seasonal residential properties around the compartment and Rush Lake. The Jones subdivision sits in the middle of the compartment within section 20.

Unique Natural Features:

No known records exist.

Archeological, Historical, and Cultural Features:

No known records exist.

Special Management Designations or Considerations:

Activities must follow Best Management Practice (BMP) guidelines when conducted within the areas that are significantly wet and/or adjacent to the North Branch Thunder Bay River and Rush Lake.

Watershed and Fisheries Considerations:

Rush Lake and the North Branch of the Thunder Bay River are found in this compartment. Rush Lake currently has a healthy panfish, largemouth bass, and northern pike population.

Wildlife Habitat Considerations:

The primary focus of wildlife habitat management will be to address the habitat requirements identified for the listed featured species found in this compartment. These species include ruffed grouse, black bear, and white-tailed deer. Based on the selected featured species, some of the most significant wildlife management issues in the management area are the maintenance of young forest, the retention of large, over-mature trees and snags and the maintenance and expansion of hard mast and mesic conifer components.

Mineral Resource and Development Concerns and/or Restrictions

Surface sediments consist of coarse-textured glacial till and lacustrine sand and gravel. The glacial drift thickness varies between 200 and 400 feet. Beneath the glacial drift is the Devonian Antrim Shale and Traverse Formation. The Antrim is quarried for cement products and the Traverse for limestone. Gravel pits are not located in the area, but potential is good. The compartment has an older Niagaran well drilled just to the north, a dry hole. This area has very limited potential for the Antrim Shale. There are no oil and gas leases in the compartment.

Vehicle Access:

Fair access. Many forest roads are seasonally wet, partially closed, or are flooded.

Survey Needs:

Section 21

Recreational Facilities and Opportunities:

The area is primarily used for hunting and fishing.

Fire Protection:

This compartment is located in the protection area of the Atlanta DNR and the Hillman Fire Department. Hillman Fire department would most likely be last on scene of any fire in the area due to their distance from the area. The Atlanta DNR has mutual aid agreements with Hillman Fire Department and also supplies them with GSA 6x6 fire unit. Fires in this area have a low potential to becoming very large due to the lowland areas. There have not been the frequency of human caused fire here as near some other subdivisions.

Report 6 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Report 7 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
 HCVA = High Conservation Value Area
 SCA = Special Conservation Area

Conservation Area	Type	Description
HCVA	Designated Critical Habitat	Critical habitat areas are established via a consultative and cooperative process between the DNR and the U.S. Fish and Wildlife service for the recovery of threatened and endangered species, as governed by Part 365, Endangered Species Protection, of the Natural Resources and Environmental Protection Act, 1994 PA 451, and the Federal Endangered Species Act of 1973. This is an active program, with proposed species plans in various stages of review. As of now only two exist, Kirtland Warbler Habitat and Piping Plover Habitat.

10	4111 - S.Maple, Hard Mast Association	Sawtimber Medium	10.3	84	81-110	-aquired in 2/11/2010 -private cut all aspen and marked trees in 2008-09 -raspberry and traces of ash in heavily cut areas
11	4139 - Aspen, Mixed Deciduous	Sapling Well	32.7	14	1-50	OPIC - FMD: cut 2001, cut record T38-97
12	4119 - Mixed Northern Hardwoods	Sawtimber Well	53.0	79	81-110	OPIC - FMD: CUT NO HEMLOCK. Alt. Coverttype: Any combination of northern hardwoods, lowland hardwoods, oak, hemlock, northern white-cedar, spruce, fir or white pine. Cut 2006, 54-008-01-01. Contract filed under compartment 72, had adjacent hwd to south cut as well. Cut only marked trees- 1/3rd cut vol birch, 2/3rds mixed hwd. -large mast oak trees to N half -thick beech saps
13	4134 - Aspen, Spruce/Fir	Sawtimber Poor	8.9	99	51-80	-scattered aspen canopy -very low vigor in aspen, left as buffer -some cedar under aspen to W

	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	General Comments:
14	6119 - Mixed Lowland Deciduous Forest	Sawtimber Medium	10.1	96	51-80	-very wet -intermittent drainage runs through center of stand -scattered log aspen with black ash poles -assume most ash is dead -small non-forest inclusion to N
15	4130 - Aspen	Poletimber Well	27.8	48	51-80	-dense fir -T102-66, cut in 1966
16	6120 - Lowland Cedar	Poletimber Medium	3.8	110	111-140	-hummocks, stagnant growth in areas -weak cedar crowns
17	4130 - Aspen	Sawtimber Well	11.1	64	51-80	
18	4111 - S.Maple, Hard Mast Association	Sawtimber Well	35.9	81	111-140	-stand will be over 110 BA in 2 yrs -see qd data for more information
