

# Compartment Review Presentation

Escanaba Forest Management Unit

Compartment 33051

Entry Year 2026

Acreage: 1,282

County Menominee

Management Area: Green Bay

---

**Stand Examiner:** Dustin Salter

**Legal Description:**

T35N R25W Section's 4 and 9

**Identified Planning Goals:**

This compartment is comprised of many different covertypes. The northern half is primarily aspen and upland conifer on ridges that are surrounded by lowland conifers and lowland brush. The southern half of the compartment is mostly upland deciduous. A mix of the different covertypes are prescribed for harvest. There are three lowland ash/hardwood stands that will be harvested prior to the ash dying. The emerald ash borer is present and is causing mortality in the mature ash. Two lowland spruce stands will be harvested, regenerating with a mix of conifers. Two natural pine stands will be thinned to improve the growth of the residual stems. Five upland conifer and upland deciduous stands will be harvested, regenerating with a mix of hardwood and conifer species. Deer have heavily browsed and killed most of the ash and maple stump sprouts from harvests over the past twenty years. This has pushed these stands to have a higher percentage of conifer.

**Soil and topography:**

This compartment contains Wainola Fine Sand; Deford-Wainola-Rousseau Complex; Tawas-Deford Association; Loxley-Dawson Association; and Deford Mucky Fine Sand among others. This compartment primarily is composed of black muck, which is poorly drained and fine sand, which is well drained. Terrain is nearly level, with a few rolling hills.

**Ownership Patterns, Development, and Land Use in and Around the Compartment:**

This compartment is on the southern end of a block of state land that is approximately 8 miles wide and 20 miles long, that extends into Delta County. This compartment is primarily blocked in with state land. There are only 4 private forties in and around this compartment, with each of them having a hunting camp. Hunting and ORV riding are the primary uses of this area.

**Unique Natural Features:**

Elwood Creek flows through the southern third of the compartment.

**Archeological, Historical, and Cultural Features:**

No Archeological, Historical, or Cultural Features known.

**Special Management Designations or Considerations:**

None

**Watershed and Fisheries Considerations:**

This compartment contains Elwood Creek, a Type 1 Designated Trout Stream, however it is has a warmwater stream classification. If any treatments are near a wetland area, best management practices should be incorporated which include a 100' buffer.

**Wildlife Habitat Considerations:**

This 1,282 acre compartment contains a diverse array of lowland and upland cover types, with the largest cover type being lowland shrub, at 16.5%. 192 acres of treatments are proposed this YOY, representing about 15% of the compartment. Of these treatments, 71 acres of clearcuts in lowland deciduous, mixed upland deciduous, and lowland coniferous forest, 27 acres of crown thinning in pine stands, 69 acres of seed tree treatments in northern hardwoods, upland mixes, and lowland coniferous forest, and 24 acres of shelterwood upland conifer stands are planned. Featured species for this compartment include American Woodcock, Wood Thrush, Black Bear, Wild Turkey, and White-tailed Deer. Clearcuts, seed tree, crown thinning, and shelterwood treatments which create young forest condition will benefit all of these species with the exception of the Wood Thrush. No treatments are planned in potential wood thrush habitat.

**Mineral Resource and Development Concerns and/or Restrictions**

No known potential exists for commercial oil & gas production in this part of the state. The nearest active sand & gravel operations are more than one mile southwest and south including the State-owned Westman Dam Road Pit. The latter has not been leased for commercial use in the last 20 years, and the pit has not been recently assessed for existing and future

potential aggregate resources. Most of the compartment consists of low wetlands, which would inhibit surface mining. Some remote geophysical surveys covering this area have been conducted, and some past mineral test drilling has occurred within one mile of the compartment. No data is currently available on the results of the past exploration efforts. There may be potential for iron ore or other metallic and critical minerals beneath the compartment, but such mineral occurrences would be at significant depth and may not have significant economic value. Additional research/exploration is needed. There is no current leasing activity involving State-owned mineral rights in the area.

**Vehicle Access:**

The Camp "O" Road and Elwood Creek Road provide the main access into the compartment. There are a number of two-track roads that branch off of the two main roads. The Camp "O" Road runs along the southern edge of the compartment and the Elwood Creek Road runs through the northern half.

**Survey Needs:**

No registered corners will need to be set.

**Recreational Facilities and Opportunities:**

A portion of the Forest Island Orv Trail runs through the northeastern corner of the compartment. There are no other developed facilities within the compartment.

**Fire Protection:**

There is a very low probability of a large wildfire in this compartment due to the forested landscape. In the northern portion there are some pine ridges, but they are surrounded by lowland forest types. And in the south, most of the forest contains hardwood. The Elwood Creek provides a water source. The upland areas of the compartment have good vehicle access.

**Additional Compartment Information:**

**The following reports from the Inventory are attached:**

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

**The following information is displayed, where pertinent, on the attached compartment maps:**

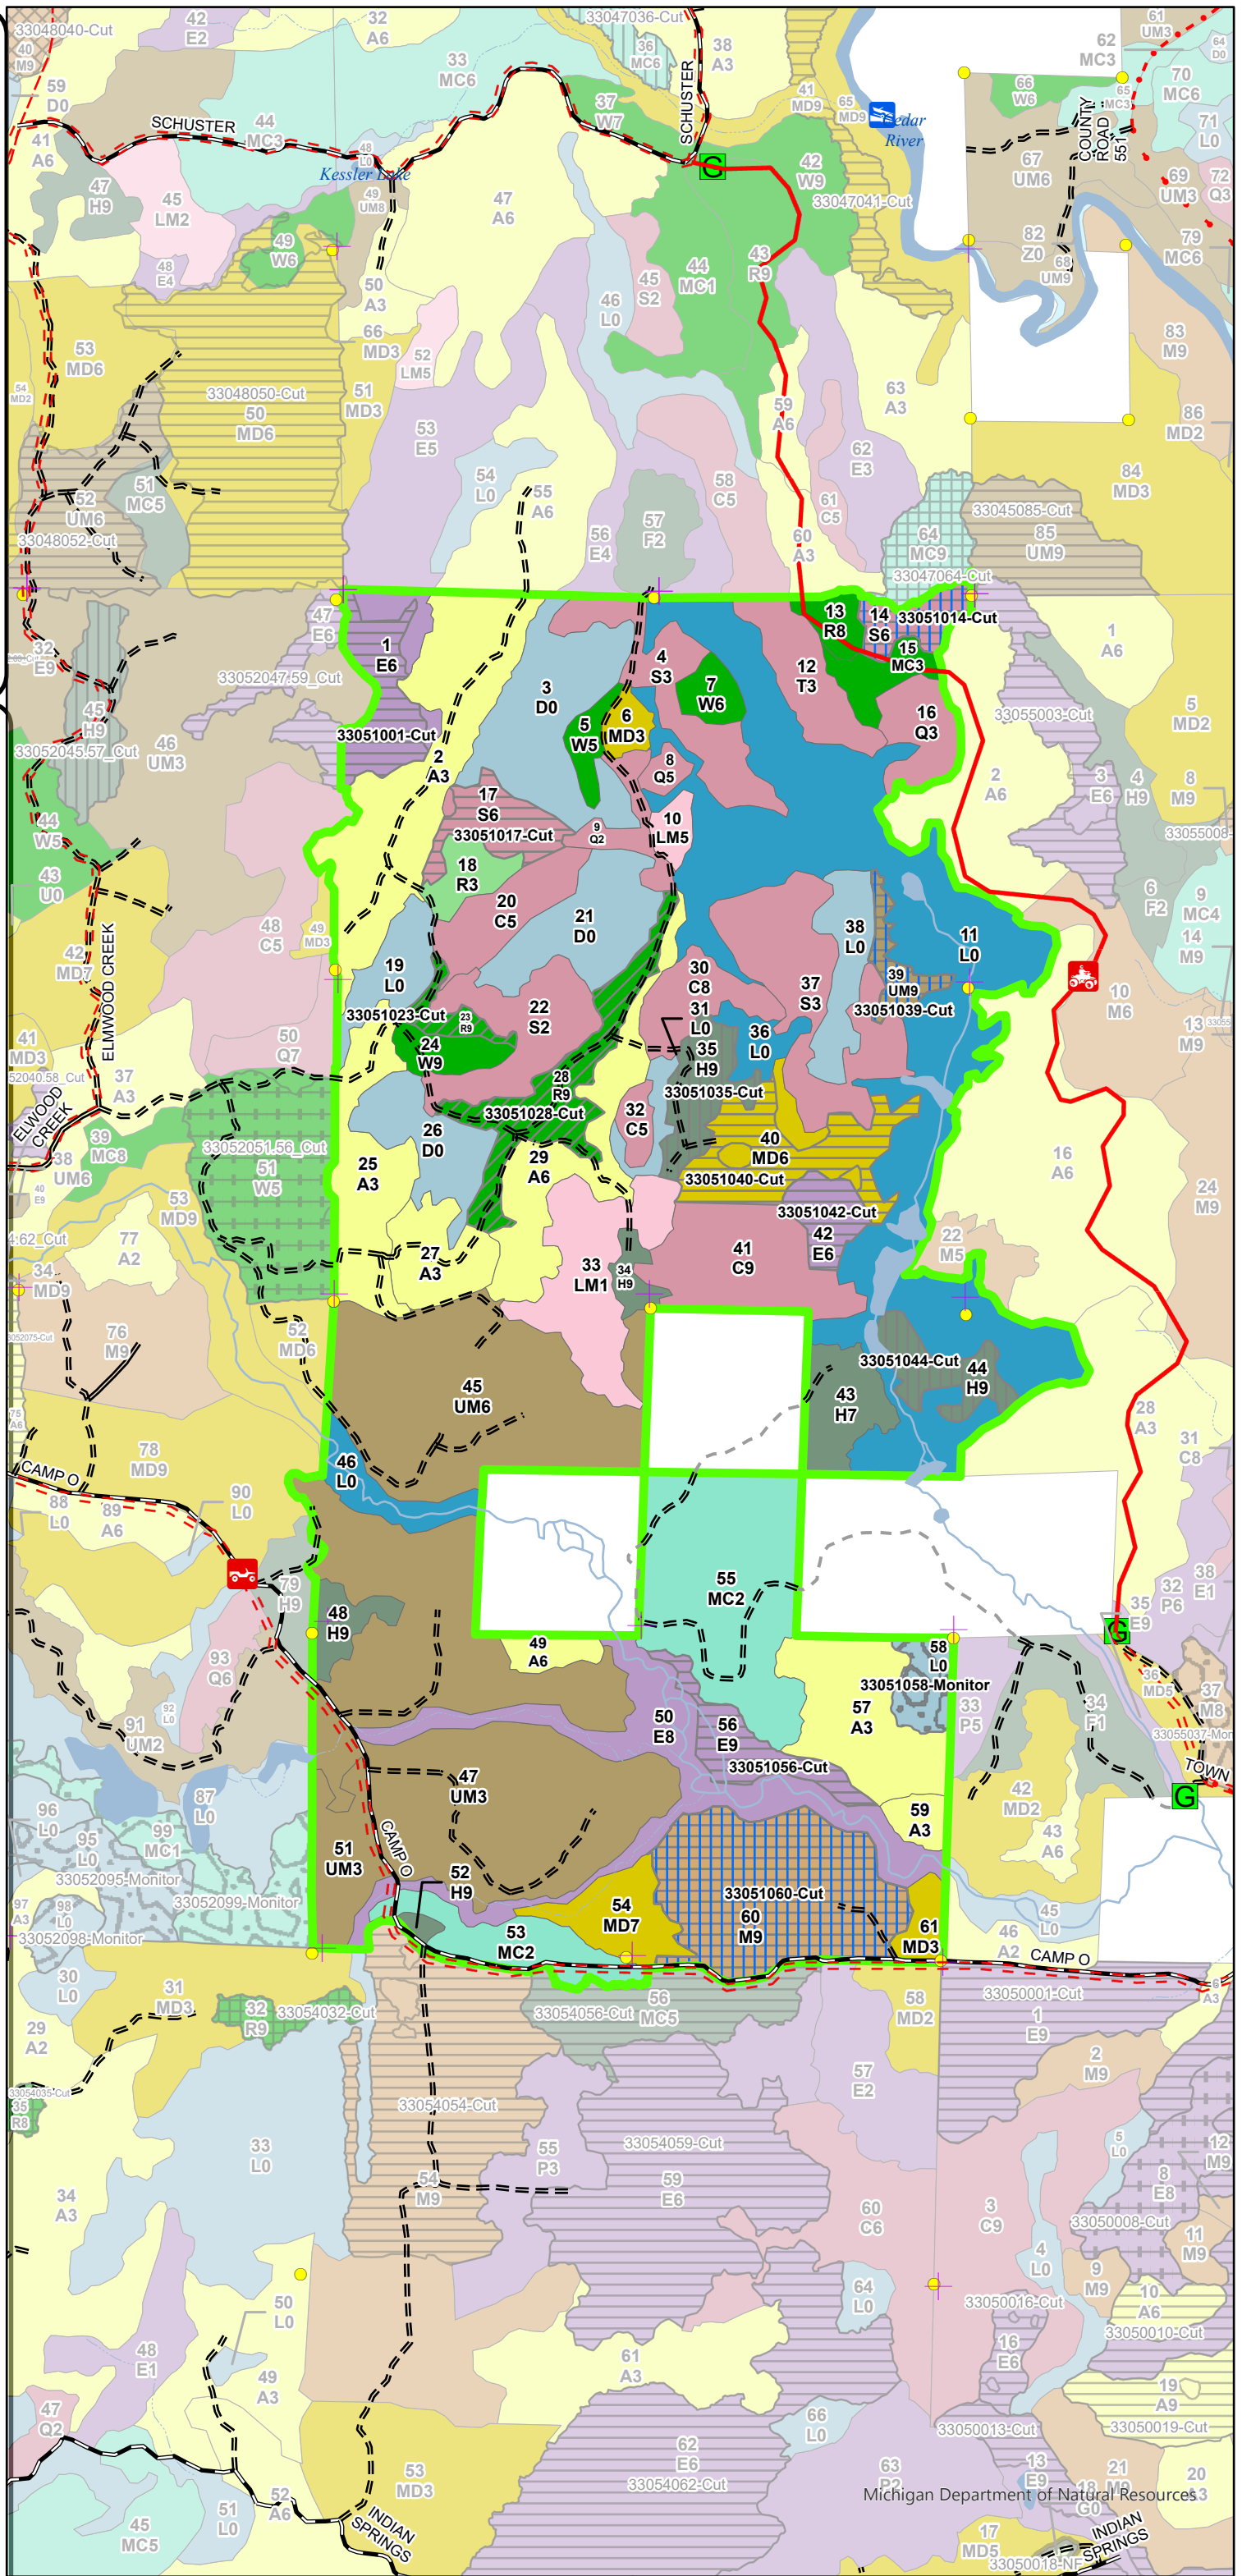

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

-------	----------------	-------	-----------------	--------------	-----------	----------	----------------	------------------	----------------------	---------------	-------------

**Proposed Treatments:**

1	33051001-Cut	15.3	6119 - Mixed Lowland Deciduous Forest	Poletimber Well	87	81-110	Harvest	Clearcut with Retention	613 - Lowland Mixed Forest	Even-Aged	No
<p><u>Prescription Specs:</u> Cut all trees greater than three (3) inches at DBH, except retain the smaller diameter portion on the north end and the dense patches of cedar area along the eastern edge. In addition retain all spruce/fir less than seven (7) inches at DBH. Mark to retain some scattered green ash trees for seed and future cavity trees.</p> <p><u>Next Step Treatments:</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Acceptable Regen:</u> Red maple, birch, tamarack, pine, ash, and spruce/fir.</p> <p><u>Other Comment:</u> Mature lowland hardwood stand, with some scattered cedar. The southeast corner of the stand has dense cedar and the northern end has heavier to lowland brush. Emerald ash borer is present and is causing defoliation and mortality. Harvesting this stand now while the ash and other lowland hardwoods are alive, will allow them to stump sprout. This stand will regenerate with a mix of lowland hardwoods and conifers. This stand is in deer conditional range and has a canopy composition of 15% cedar. Harvest of cedar outside of planned retention areas has been agreed upon between FRD and WLD in this stand. This harvest is estimated to produce about 100 cords.</p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>											
14	33051014-Cut	8.3	6122 - Black Spruce	Poletimber Well	95	81-110	Harvest	Seed Tree with Retention	612 - Lowland Coniferous Forest	Even-Aged	No
<p><u>Prescription Specs:</u> Cut all trees greater than three (3) inches at DBH; except mark to retain some pine seed trees on the narrow upland strips.</p> <p><u>Next Step Treatments:</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Acceptable Regen:</u> Spruce, pine, and tamarack.</p> <p><u>Other Comment:</u> Mature lowland spruce and pine stand. All species are mature and ready to be harvested. Lowland stand with a few narrow upland ridges. This stand will regenerate really well with leaving some pine seed trees and the seeds within the moss layer getting full sunlight and germinating.</p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>											
17	33051017-Cut	11.5	6122 - Black Spruce	Poletimber Well	93	51-80	Harvest	Clearcut with Retention	612 - Lowland Coniferous Forest	Even-Aged	No
<p><u>Prescription Specs:</u> Cut all trees greater than three (3) inches at DBH, except retain the dense patch of cedar in the northwest corner of the stand.</p> <p><u>Next Step Treatments:</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Acceptable Regen:</u> Spruce, tamarack, pine, ash, maple and balsam fir.</p> <p><u>Other Comment:</u> Moderate to low quality black spruce in the northern half and a mix of lowland conifers in the southern half. All species are mature and are ready to be harvested. This stand has a dense layer of moss that once the overstory is removed the seeds in the moss will germinate and grow readily. This stand is in deer conditional range and has a canopy composition of 5% cedar. Harvest of cedar outside of planned retention areas has been agreed upon between FRD and WLD in this stand. This harvest is estimated to produce about 30 cords.</p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>

Treatment Name	Acres	Stand CoverType	Size Density	Stand Age	BA Range	Treatment Type	Treatment Method	Cover Type Objective	Age Structure	Habitat Cut
----------------	-------	-----------------	--------------	-----------	----------	----------------	------------------	----------------------	---------------	-------------

23	33051023-Cut	4.7	42210 - Natural Red Pine	Sawtimber Well	65	111-140	Harvest	Crown Thinning	42210 - Natural Red Pine	Uneven-Aged	No
----	--------------	-----	--------------------------	----------------	----	---------	---------	----------------	--------------------------	-------------	----

Prescription Thin stand down to 90 basal area, marking the pine to cut and cutting all other merchantable species.

Specs:

Next Step

Treatments:

Acceptable Red and white pine.

Regen:

Other Good quality red pine stand with a dense understory of aspen sprouts. Stand was thinned in 2009 on contract 034-06-01. The pine is ready to be thinned again, to improve the growth of the residual stems.

Site Condition

Proposed Start Date: 10/1 /2025

28	33051028-Cut	22.8	42210 - Natural Red Pine	Sawtimber Well	65	141-170	Harvest	Crown Thinning	42210 - Natural Red Pine	Uneven-Aged	No
----	--------------	------	--------------------------	----------------	----	---------	---------	----------------	--------------------------	-------------	----

Prescription Thin stand down to 90 to 120 basal area, marking the pine to cut and cutting all other merchantable species. In the areas with larger diameters reduce the basal area down to 90 and in the pole sized areas reduce the basal area down to 120.

Next Step

Treatments:

Acceptable Red and white pine.

Regen:

Other Overall a very good quality natural red pine stand, that is ready to be thinned again. The average basal area is around 150. The thinning will improve the growth of the residual stems. The stand had its first thinning in 2009 on contract 034-06-01.

Site Condition

Proposed Start Date: 10/1 /2025

35	33051035-Cut	13.0	42350 - Upland Hemlock	Sawtimber Well	137	111-140	Harvest	Shelterwood with Retention	4312 - Hemlock, Mixed Deciduous	Uneven-Aged	No
----	--------------	------	------------------------	----------------	-----	---------	---------	----------------------------	---------------------------------	-------------	----

Prescription Cut all trees greater than three (3) inches, except hemlock. Mark to retain some pine seed trees.

Specs:

Next Step Monitoring, Natural Regen (Re-Inventory)

Treatments:

Acceptable Hemlock, pine, maple, birch, and spruce/fir.

Regen:

Other Mature dense hemlock stand, with some pine and hardwood mixed in. The shorter lived species are mature and should be harvested. The stand is too dense at this time to get regeneration, by opening the stand up more it will allow for more pine, hemlock and red maple regeneration. This stand was last thinned in 2009 on contract 034-06-01.

Site Condition

Proposed Start Date: 10/1 /2025

Treatment Name	Acres	Stand CoverType	Size Density	Stand Age	BA Range	Treatment Type	Treatment Method	Cover Type Objective	Age Structure	Habitat Cut
<b>39 33051039-Cut</b>	6.2	4319 - Mixed Upland Forest	Sawtimber Well	101	81-110	Harvest	Seed Tree with Retention	42260 - Natural Pine, Mixed Deciduous	Even-Aged	No
<p><u>Prescription</u> Cut all trees greater than three (3) at DBH, except retain all hemlock. Also mark to retain some pine seed trees.</p> <p><u>Specs:</u></p> <p><u>Next Step</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Treatments:</u></p> <p><u>Acceptable Regen:</u> Aspen, maple, pine, birch, and spruce/fir.</p> <p><u>Other Comment:</u> Mature mixed hardwood and pine stand. All species are mature and ready to be harvested. This stand is an upland sand ridge, with more pine on the north end and more hardwood on the south end. This stand will be seed tree harvested to allow the hardwoods to sprout and the residual conifers to provide seed. This will allow the stand to continue to be a mixed forest type.</p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>										
<b>40 33051040-Cut</b>	23.7	4191 - Mixed Upland Deciduous with Conifer	Poletimber Well	49	51-80	Harvest	Clearcut with Retention	4133 - Aspen, Mixed Pine	Even-Aged	No
<p><u>Prescription</u> Cut all trees greater than three (3) inches at DBH, except retain all hemlock. Also mark to retain some pine, cedar, ash, and yellow birch seed trees. Retain the dense pockets of hemlock and cedar, retaining the other species within them.</p> <p><u>Specs:</u></p> <p><u>Next Step</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Treatments:</u></p> <p><u>Acceptable Regen:</u> Aspen, maple, pine, birch, balm, and spruce/fir.</p> <p><u>Other Comment:</u> Mature stand with a mix of aspen and red maple, with pockets of conifers. The stand is a two aged stand with 50 year old aspen and fir, with older hardwood, hemlock, and cedar. The majority of the stand is upland, except for an ash drain running through the middle. All species are mature and are ready to be harvested. This stand will be managed for a mix of aspen, hardwood and a mix of conifers. The aspen and hardwoods will sprout following the harvest and the conifers will seed in over time. This stand is in deer conditional range and has a canopy composition of 10% hemlock and 5% cedar. Harvest of cedar outside of planned retention areas has been agreed upon between FRD and WLD in this stand. This harvest is estimated to produce about 40 cords.</p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>										
<b>42 33051042-Cut</b>	8.5	6115 - Lowland Ash	Poletimber Well	97	51-80	Harvest	Clearcut with Retention	6117 - Lowland Deciduous, Mixed Coniferous	Even-Aged	No
<p><u>Prescription</u> Cut all trees greater than three (3) inches at DBH, except mark to retain some cedar, birch, maple, and ash seed trees. Also retain all spruce/fir less than seven (7) inches at DBH.</p> <p><u>Specs:</u></p> <p><u>Next Step</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Treatments:</u></p> <p><u>Acceptable Regen:</u> Maple, birch, ash, pine, spruce/fir, and tamarack.</p> <p><u>Other Comment:</u> Mature lowland ash stand, that needs to be harvested prior to the emerald ash borer kills it all. The stand needs to be harvested while the ash and red maple are vigorous enough to stump sprout following the harvest. This stand is in deer conditional range and has a canopy composition of 15% cedar. Harvest of cedar outside of planned retention areas has been agreed upon between FRD and WLD in this stand. This harvest is estimated to produce about 30 cords.</p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>

Treatment Name	Acres	Stand CoverType	Size Density	Stand Age	BA Range	Treatment Type	Treatment Method	Cover Type Objective	Age Structure	Habitat Cut
<b>44 33051044-Cut</b>	10.9	42350 - Upland Hemlock	Sawtimber Well	138	171-200	Harvest	Shelterwood	4312 - Hemlock, Mixed Deciduous	Two-Aged	No
<p><u>Prescription Specs:</u> Cut all trees greater than three (3) inches at DBH, except retain the hemlock. Also mark to retain some pine and birch seed trees. A small amount of hemlock will need to be harvested to harvest all other species. The Harvest Exception specification will be applied to the contract.</p> <p><u>Next Step Treatments:</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Acceptable Regen:</u> Maple, pine, birch, aspen, balm, and spruce/fir.</p> <p><u>Other Comment:</u> Upland hemlock and deciduous stand. The shorter lived species are mature and dying out of the stand. The shorter lived species should be harvested while the hardwoods are vigorous enough to sprout following the harvest. The open areas of the stand following the harvest will regenerate with a mix of hardwoods and conifers. This stand is in deer conditional range and has a canopy composition of 55% hemlock. Harvest of hemlock for operational purposes has been agreed upon between FRD and WLD in this stand. This harvest is estimated to produce about 10 cords of hemlock.</p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>										
<b>56 33051056-Cut</b>	12.5	6115 - Lowland Ash	Sawtimber Well	99	81-110	Harvest	Clearcut with Retention	613 - Lowland Mixed Forest	Even-Aged	No
<p><u>Prescription Specs:</u> Cut all trees greater than three (3) inches at DBH; except retain some ash seed trees. Also, retain all spruce/fir that are less than seven (7) inches at DBH.</p> <p><u>Next Step Treatments:</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Acceptable Regen:</u> Ash, maple, balm, spruce/fir, and white pine.</p> <p><u>Other Comment:</u> Good quality green ash stand, that is ready to be harvested. The emerald ash borer is present and is causing dieback. This stand needs to be harvested soon to prevent the loss of timber products and to allow the ash to stump sprout following the harvest while they are still alive. About 5 cords of cedar will be harvested.</p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>										
<b>58 33051058-Monitor</b>	8.1	6229 - Mixed lowland shrub	Nonstocked	0	Unspecified	Monitoring	Natural Regen (Re-Inventory)	613 - Lowland Mixed Forest	Even-Aged	No
<p><u>Prescription Specs:</u> Monitor for regeneration.</p> <p><u>Next Step Treatments:</u></p> <p><u>Acceptable Regen:</u> Balm, ash, maple, spruce/fir, tamarack, and white pine.</p> <p><u>Other Comment:</u> Stand was clearcut in 2019 on contract 33-034-16. The cedar was retained, but most has blown over or died since the harvest. There is very little regeneration, deer have browsed and killed almost all of the red maple and ash stump sprouts. The stand is too wet to try and scarify it, to improve the regeneration.</p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>

Treatment Name	Acres	Stand CoverType	Size Density	Stand Age	BA Range	Treatment Type	Treatment Method	Cover Type Objective	Age Structure	Habitat Cut
60 33051060-Cut	54.5	4113 - R.Maple, Conifer	Sawtimber Well	108	111-140	Harvest	Seed Tree with Retention	4113 - R.Maple, Conifer	Even-Aged	No
<p><u>Prescription</u> Cut all trees greater than three (3) inches at DBH, except retain all hemlock. Also delineate out and retain the dense patches of hemlock, including the other species that are designated for cutting. Mark to retain about 10 BA of pine, beech, birch, ash, cedar, spruce/fir, and maple for seed, partial shade, and diversity.</p> <p><u>Specs:</u></p> <p><u>Next Step</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Treatments:</u></p> <p><u>Acceptable Regen:</u> Red maple, beech, ash, white pine, hemlock, and spruce/fir.</p> <p><u>Other Comment:</u> Mature red maple stand with a dense understory of conifer regeneration. The maple along with all other species are ready to be harvested. The red maple has lots of defect and decline due to its age, so thinning is no longer an effective treatment. This stand was last thinned in 1995 on contract 051-92-01. The southwestern quarter of the stand has a few lowland ash drains running through it. Seed tree harvest this stand, leaving a mix of species. This will allow the advanced regeneration to be released and the stand will be open enough to allow the hardwoods to stump sprout. This stand is in deer conditional range and has a canopy composition of 10% hemlock and 3% cedar. Harvest of cedar outside of planned retention areas has been agreed upon between FRD and WLD in this stand. This harvest is estimated to produce about 60 cords.</p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>										

Total Treatment Acreage Proposed: 200

### Report 5 – PROPOSED SPECIAL CONSERVATION AREA\* (SCA) DETAILS

\* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments
----------

**Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS**

\* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area  
 HCVA = High Conservation Value Area  
 SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Lake	A coldwater lake has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species to persist from year to year. Suitable conditions for coldwater fishes may occur in Michigan lakes if they are relatively deep, have substantial groundwater inflows, or are located in colder (northern) areas of the state. Such lakes are established by Director's action and designated as trout resources by Fisheries Order 200.
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments																																										
1	6119 - Mixed Lowland Deciduous Forest	Poletimber Well	21.1	87	81-110	N/A	Mature lowland hardwood stand, with some scattered cedar. The southeast corner of the stand has dense cedar and the northern end has heavier to lowland brush. Emerald ash borer is present and is causing defoliation and mortality. Harvesting this stand now while the ash and other lowland hardwoods are alive, will allow them to stump sprout. This stand will regenerate with a mix of lowland hardwoods and conifers.

25	4133 - Aspen, Mixed Pine	Sapling Well	26.3	6	Immature	N/A	Fully stocked two-aged stand with older pine regeneration over a fully stocked understory of aspen and red maple. The stand was seed tree cut in 2018 on contract 33-026-16. All trees were cut, except some pine seed trees were retained. This stand had a dense understory of pine and red maple saplings that were released with the removal of the overstory. The stand is primarily upland, with the exception of a few lowland pockets.

<b>39</b>	4319 - Mixed Upland Forest	Sawtimber Well	6.2	101	81-110	N/A	Mature mixed hardwood and pine stand. All species are mature and ready to be harvested. This stand is an upland sand ridge, with more pine on the north end and more hardwood on the south end. This stand will be seed tree harvested to allow the hardwoods to sprout and the residual conifers to provide seed. This will allow the stand to continue to be a mixed forest type.

<b>53</b>	429 - Mixed Upland Conifers	Sapling Medium	17.1	35	1-50	N/A	Stand was clearcut in 2019 on contract 33-027-16; except the hemlock, white pine and cedar were retained. Stand was previously thinned in 1994 on contract 051-92-01. The stand is a mix of advanced white pine and spruce regeneration with red maple sprouts from the last harvest. The deer have browsed and killed most of the ash and red maple stump sprouts following the harvest. The stand is 70% upland, with a lowland swale running through the middle of the stand.

<b>60</b>	4113 - R.Maple, Conifer	Sawtimber Well	54.5	108	111-140	N/A	Mature red maple stand with a dense understory of conifer regeneration. The maple along with all other species are ready to be harvested. The red maple has lots of defect and decline due to its age, so thinning is no longer an effective treatment. This stand was last thinned in 1995 on contract 051-92-01. The southwestern quarter of the stand has a few lowland ash drains running through it. Seed tree harvest this stand, leaving a mix of species. This will allow the advanced regeneration to be released and the stand will be open enough to allow the hardwoods to stump sprout.
