

Compartment Review Presentation

Escanaba Forest Management Unit

Compartment 33084

Entry Year 2026

Acreage: 1,748

County Delta

Management Area: Menominee-Marquette

Stand Examiner: Dan Racine

Legal Description:

T41N R24W sections 5, 7, 8, 17, 18, 19, 30

Identified Planning Goals:

This compartment contains a mix of upland and lowland forest stands. The majority of the upland stands are aspen and aspen spruce/fir types that have been harvested in previous treatment periods. The treatments this treatment period are mature aspen stand designed to regenerate the aspen before it is in decline. The planting scheduled was from previous harvests within the European larch stands and scheduled for trenching and planting to spruce. The previous treatment period had treatments within the lowland cover types.

Soil and topography:

Soils are poorly drained nonacid mucks and peats, in nearly equal proportion, interspersed among well drained loam soils. Other soils include well drained loams over limestone bedrock. Major soil series include Miami Loams, Cathro, Trenary loams, Onaway, Carbondale, and Ronsseau Sand. Topography is gently rolling with level lowlands.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

This compartment is within a mixed ownership pattern. Mostly state land to the east of the compartment but industrial forest land mixed with non-industrial forest land surrounding the rest of the compartment.

Unique Natural Features:

No Unique Natural Features known.

Archeological, Historical, and Cultural Features:

No Archeological, Historical, or Cultural Features known.

Special Management Designations or Considerations:

The Mile Twenty One road is closed by directors order. This compartment contains a portion of the Deer Range Improvement Purchase (DRIP) in Delta and Menominee counties.

Watershed and Fisheries Considerations:

This compartment contains the Main Branch Ford River and an unnamed stream that serves as a tributary to the Main Branch Ford River. The Main Branch Ford River is a designated Type 4 trout stream greater than 50 feet wide and has a predicted mean July temperature of 70.5 °F (cool stream). A minimum 100-foot, plus 5-feet per 1% increase in slope, buffer is recommended for the Main Branch Ford River to protect riparian areas in accordance with Best Management Practices. The unnamed tributary is a non-designated stream less than 50 feet wide and has a predicted mean July temperature of 63.7°F (cool stream). A minimum 100-foot, plus 5-feet per 1% increase in slope, buffer is recommended for the unnamed tributary to protect riparian areas in accordance with Best Management Practices.

Wildlife Habitat Considerations:

This 1,748 acre compartment contains a diverse array of lowland and upland community types, with the largest cover types being cedar, at 36%, aspen, at 27%, and tamarack, at 11%. 119 acres of forest treatments have been prescribed this YOY, representing 6.8% of the compartment. Of these treatments, 98 acres of clearcuts are planned in aspen, lowland deciduous, mixed upland deciduous, and lowland coniferous stands, and 21 acres of shelterwood treatments are planned in northern hardwoods. Featured species for this compartment include American Woodcock, Wood Thrush, White-tailed Deer, Wild Turkey, and Black Bear. Clearcuts and shelterwood treatments which create young forest conditions, will benefit all of these species with the exception of Wood Thrush. No potential habitat for Wood Thrush is to be impacted this YOY.

Mineral Resource and Development Concerns and/or Restrictions

No known potential exists for commercial oil & gas production in this part of the state. The closest known active sand & gravel operation is more than three miles north. Bedrock limestone is at or near the surface within the compartment and across the area, so potential for sand & gravel may be limited. In addition, much of the compartment consists of low wetlands, which would inhibit surface mining for development of sand & gravel or limestone for aggregate. Some remote

geophysical surveys covering this area have been conducted and have revealed potential metallic mineral targets (in the form of magnetic anomalies) including beneath the compartment. One such feature, one mile southwest of the compartment, was the focus of considerable exploration test drilling for iron ore in the late 1960s. Logs from those boreholes indicate beds of iron formation beginning around 200-300 feet below the surface and perhaps extending to 500 feet or more. However, the depth, thickness, and grade of the ore beds may be such that the deposit does not have significant economic value. State-owned metallic mineral rights in the compartment were briefly leased in the late 1980s, but there has been no leasing activity involving State-owned mineral rights since. The State does not own all the mineral rights within the compartment. Because the mineral estate is the dominant estate, the surface owner must provide the owner of the mineral rights reasonable access to the surface for mineral exploration and development.

Vehicle Access:

The northern block of this compartment has good access. The center block is very difficult to access. The south part of the compartment has access through private lands.

Survey Needs:

N/A

Recreational Facilities and Opportunities:

There are not any recreational facilities within this compartment, however there is very good opportunities for hunting and fishing in this area.

Fire Protection:

Most of this compartment is timber types that are less prone to fire. Should a fire occur portions of this compartment will be extremely difficult to access. There is abundant water within a few miles of this compartment.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

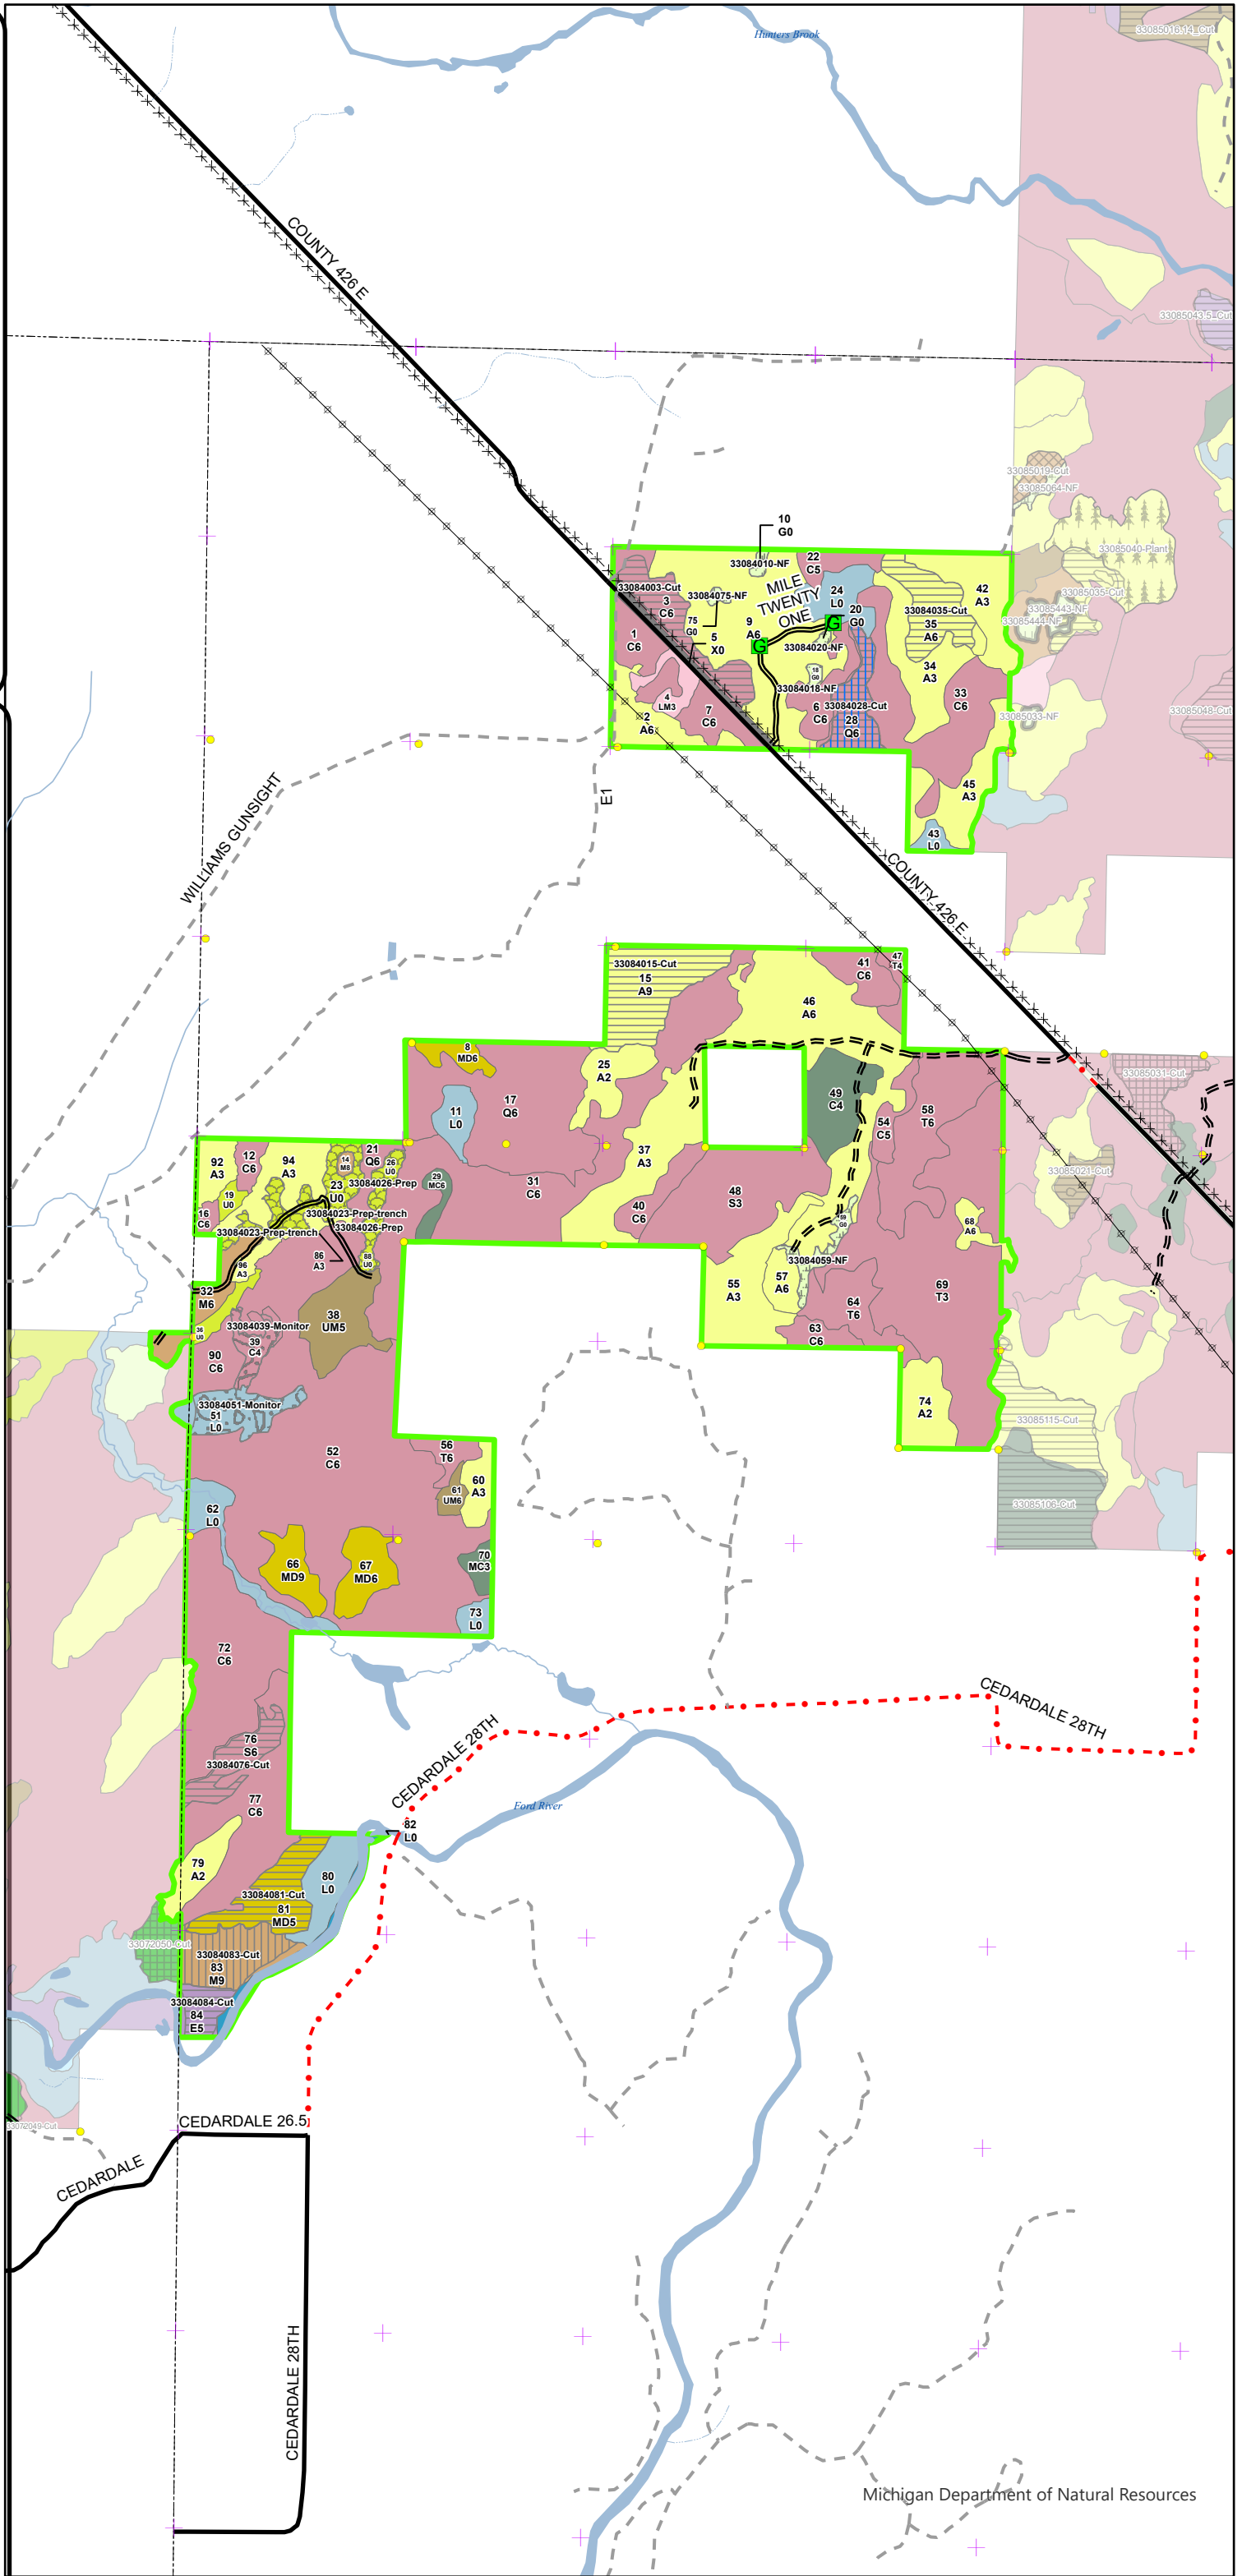

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Treatment Name	Acres	Stand CoverType	Size Density	Stand Age	BA Range	Treatment Type	Treatment Method	Cover Type Objective	Age Structure	Habitat Cut
----------------	-------	-----------------	--------------	-----------	----------	----------------	------------------	----------------------	---------------	-------------

83	33084083-Cut	21.2	4119 - Mixed Northern Hardwoods	Sawtimber Well	92	51-80	Harvest	Shelterwood with Retention	4319 - Mixed Upland Forest	Even-Aged	No
-----------	---------------------	------	---------------------------------	----------------	----	-------	---------	----------------------------	----------------------------	-----------	----

Prescription Specs: Shelterwood with retention: Leave retention along red line to the east. Leave all hemlock and cedar. Leave some white pine, yellow birch and a mix of maple protect the existing regeneration.

Next Step Treatments: Monitoring, Natural Regen (Re-Inventory)

Acceptable Regen: Mixed upland deciduous and conifer species.

Other Comment: The access is required through private property. Harvest during the winter months only.

The harvest is designed to regenerate the existing stand with a mix of upland deciduous and conifer species with low Sawlog potential.

Monitor the regeneration the treatment period, expecting some maple stump sprouting, pine and additional mixed upland conifer species.

Site Condition

Proposed Start Date: 10/1 /2025

84	33084084-Cut	8.0	6117 - Lowland Deciduous, Mixed Coniferous	Poletimber Medium	92	51-80	Harvest	Clearcut with Retention	611 - Lowland Deciduous Forest	Even-Aged	No
-----------	---------------------	-----	--	-------------------	----	-------	---------	-------------------------	--------------------------------	-----------	----

Prescription Specs: Clearcut with retention: Cut all trees except do not cut any cedar. A minimum of 100 foot buffer left along the Ford River.

Next Step Treatments: Monitoring, Natural Regen (Re-Inventory)

Acceptable Regen: Lowland deciduous and conifer species.

Other Comment: The access to this stand is through private property. Harvest during the winter months only.

The harvest is designed to salvage the ash trees due to Emerald Ash Borer.

Monitor the regeneration during the next inventory cycle. The ash and mix of species expected to regenerate in this stand. If the regeneration is unsuccessful look at options to plant alternate species.

Site Condition

Proposed Start Date: 10/1 /2025

Approved Treatments:

3	33084003-Cut	17.6	6120 - Lowland Cedar	Poletimber Well	116		Harvest	Clearcut with Retention	6128 - Lowland Coniferous, Mixed Deciduous	Even-Aged	No
----------	---------------------	------	----------------------	-----------------	-----	--	---------	-------------------------	--	-----------	----

Prescription Specs: Clearcut with reserves- Leave retention patches of the areas with the heaviest cedar volumes and all cut all other trees.

Next Step Treatments: ; Monitoring, Natural Regen (Re-Inventory)

Acceptable Regen: Lowland conifers, aspen, and birch.

Other Comment: The cedar cover type is approximately 35% of the canopy with cedar in heavy patches. Plant Red Osier Dogwood in the lowest areas and long the edge. Old next step comments: Wildlife Division will create an FTP for planting Red Osier Dogwood and other soft mast species. Monitor the regeneration at appropriate intervals.
