

Compartment Review Presentation

Escanaba Forest Management Unit

Compartment 33099

Entry Year 2026

Acreage: 676

County Delta

Management Area: Menominee-Marquette

Stand Examiner: Dan Racine

Legal Description:

T43N, R22W, Sections 19&30; T43N, R23W, Section 24

Identified Planning Goals:

The majority of the upland cover type is aspen with a minor component of northern hardwood and mixed upland deciduous. The majority of the lowland cover type is cedar with a minor component of mixed lowland conifer. There is one treatment scheduled for harvest in an aspen stand along the Engineer road designed to aid in the age class distribution of aspen within the management area and regenerate the aspen.

Soil and topography:

Major soil types are Carbondale, Lupton, Rifle, Tacoosh, Angelica, and Trenary. Topography is nearly level to moderately steep.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

State land to the north and east. Non-Industrial Private land borders to the south and west.

Unique Natural Features:

No Unique Natural Features known.

Archeological, Historical, and Cultural Features:

No Archeological, Historical, or Cultural Features known.

Special Management Designations or Considerations:

This area is part of the Lampi deer yard cedar regeneration project. This project was started in the late 1950's and has been ongoing for the past 50 years or so.

Watershed and Fisheries Considerations:

This compartment contains the Main Branch Rapid River. The Main Branch Rapid River is a designated Type 1 trout stream less than 50 foot wide and has a predicted mean July temperature of 66.4°F (cool stream). A 300' buffer is recommended for the Main Branch Rapid River in riparian areas susceptible to Aspen regeneration. For areas not susceptible to Aspen regeneration, a minimum 100 feet, plus 5 feet per 1% increase in slope, buffer is recommended to protect riparian areas in accordance with Best Management Practices.

Wildlife Habitat Considerations:

Within this 676 acre compartment, 45 acres of forest treatments have been prescribed this YOY, representing about 3% of the compartment. These acres represent a single planned clearcut treatment in an aspen stand. Featured species for this stand include American Woodcock, Snowshoe Hare, Black Bear, Wild Turkey, and White-tailed Deer. Clearcuts, which create young forest conditions, will benefit all of these species.

Mineral Resource and Development Concerns and/or Restrictions

No known potential exists for commercial oil & gas production in this part of the state. No known active sand & gravel operations exist in the area. Bedrock limestone is at or near the surface within the compartment and across the area, so potential for sand & gravel may be limited. In addition, much of the compartment consists of low wetlands, which would inhibit surface mining for development of either sand & gravel or limestone for aggregate. Furthermore, the compartment might be too far from populated areas (markets) for any aggregate resources present to have much economic potential beyond use by the county road commission or DNR for local road maintenance. Some remote geophysical surveys covering this area have been conducted and have revealed potential metallic mineral targets in the subsurface in the form of magnetic anomalies. One such feature has been identified less than one mile south of the compartment, and it was the focus of some exploration test drilling for iron ore in the past. No magnetic anomalies have been identified beneath the compartment, and the potential for metallic minerals from within the compartment is considered low at this time. There is no current or past leasing activity involving State-owned mineral rights in the area.

Vehicle Access:

Limited, private land and wet ground make it hard to access.

Survey Needs:

None

Recreational Facilities and Opportunities:

Hunting and trapping.

Fire Protection:

If a fire should ever get started in this area, initial attack will be difficult. As stated before access is limited.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

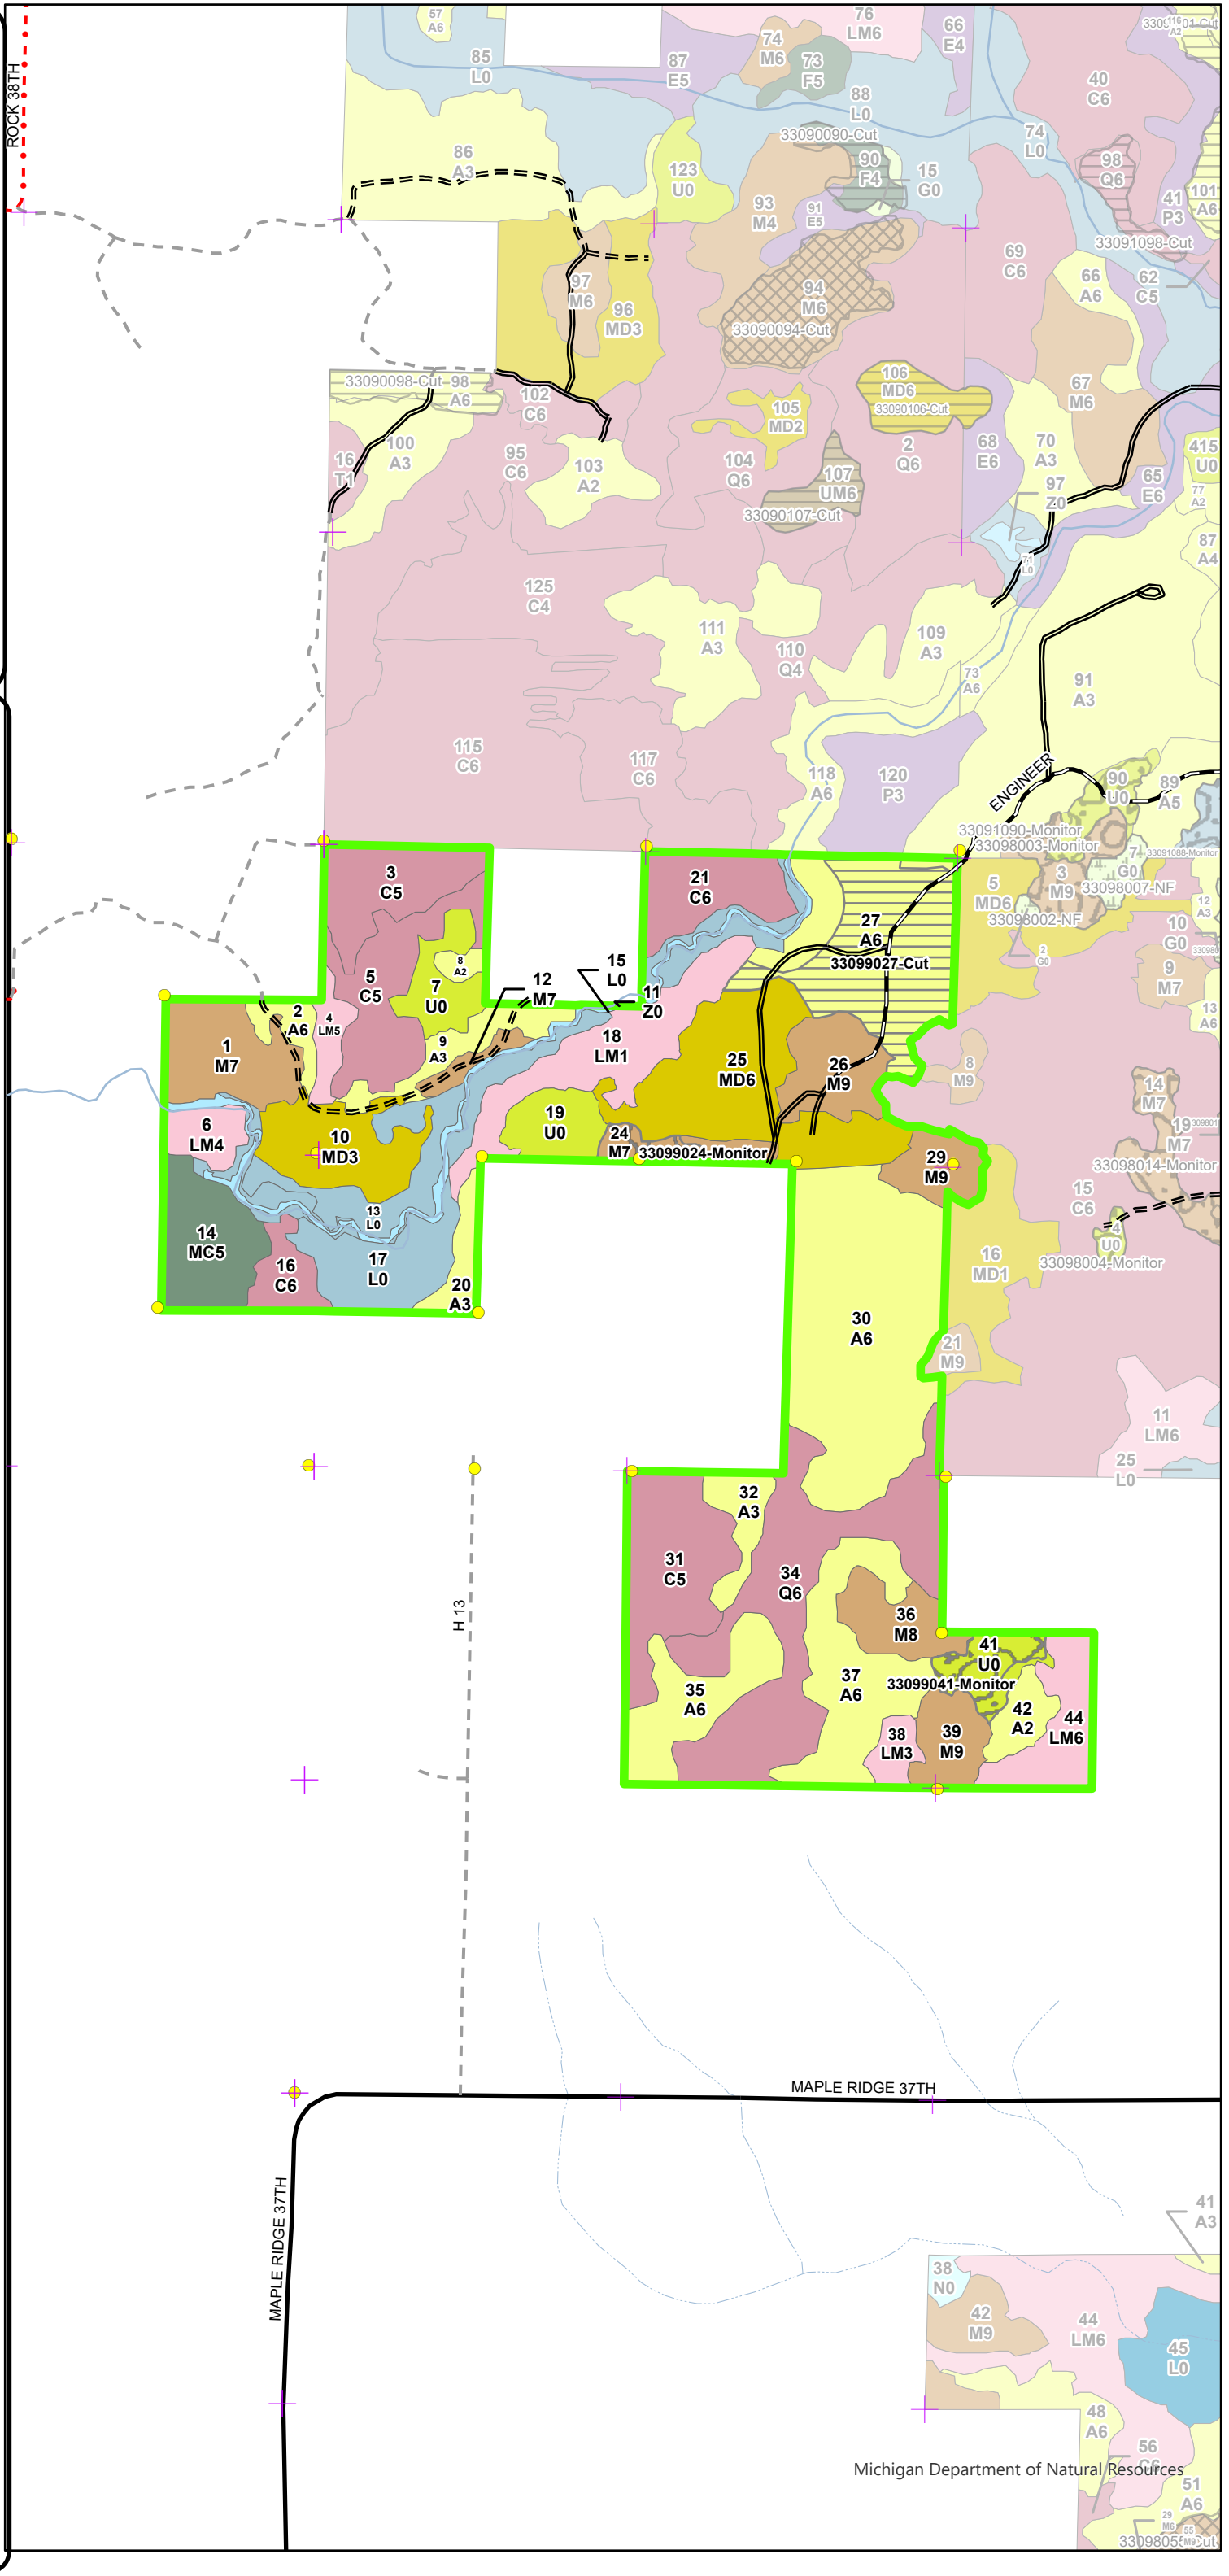

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
 HCVA = High Conservation Value Area
 SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.
SCA	Habitat Area	An area that provide some specific need for the life cycle of wildlife species, including State Wildlife Areas and Waterfowl Production Areas, deer wintering complexes in lowland conifer communities, grassland openings and savannas. Habitat areas are distinct from critical habitat designated for recovery of endangered or threatened species (such as Kirtland's warbler or piping plover areas) in that they are more general in nature, are not primarily associated with threatened or endangered species, and are not covered by species recovery plans that are developed in cooperation with Federal agencies.
SCA	Riparian Area	A transitional area between aquatic and terrestrial ecosystems in which the terrestrial ecosystem influences the aquatic ecosystem and vice-versa. Because of the unique conditions adjacent to lakes, streams and open water wetlands, riparian areas harbor a high diversity of plants and wildlife. Riparian communities are ecologically and socially significant in their effects on water quality and quantity, as well as aesthetics, habitat, bank stability, timber production, and their contribution to overall biodiversity.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments			
1	4112 - Maple, Beech, Cherry Association	Sawtimber Poor	19.8	90	1-50	N/A	This stand was unit 1 of the North and West of Rapid completed in 2019. Other species include hemlock, yellow birch, and paper birch.			
Canopy Species		% Cover	Size Class	DBH	Age	Sub-Canopy Species		Density	Avg. Height	Size
Northern White Cedar		5	Pole	8		Sugar Maple		Medium	5 - 10 feet	Sapling
Red Maple		60	Log/Pole	10	90	Balsam Fir		Medium	Variable	Sapling
Sugar Maple		35	Log	10		Red Maple		High	Variable	Sapling
						Hazelnut (Beaked)	Medium	< 5 feet	Tall Shrub	
2	4136 - Aspen, Mixed Conifer	Poletimber Well	5.1	28	Immature	N/A	Aspen and red maple regen under residual red maple, and balsam fir.			
Canopy Species		% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size	
Northern White Cedar		10	Pole	8		Balsam Fir	Medium	10 - 20 feet	Sapling	
Yellow Birch		10	Pole/Sapling	7		Tag Alder	Low	< 5 feet	Tall Shrub	
Balsam Poplar		20	Pole/Sapling	6		Red Maple	Medium	10 - 20 feet	Sapling	
Quaking Aspen		40	Pole/Sapling	6	28	Quaking Aspen	Medium	10 - 20 feet	Sapling	
Red Maple		10	Pole/Sapling	7						
Balsam Fir		10	Pole	8						
3	6120 - Lowland Cedar	Poletimber Medium	18.9	137	Unspecified	N/A	This stand is a mix of two aged lowland conifer. It was harvested in 1969 using the strip cut method and again in 1996 using the seed tree method. little cedar regen, more tamarack and spruce. Stand in adjacent compartment (90) to north has significant regen of cedar.			
Canopy Species		% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size	
Black Spruce		20	Pole/Sapling	6		Black Spruce	Low	< 5 feet	Sapling	
Tamarack		20	Pole/Sapling	6		Tamarack	Medium	5 - 10 feet	Sapling	
Northern White Cedar		60	Pole	8	137	Michigan Holly	Medium	5 - 10 feet	Tall Shrub	
4	6132 - Mixed Lowland Forest with Cedar	Poletimber Medium	5.4	90	1-50	N/A	Stand is scattered B.ash, B. fir, aspen, balm, and a few Paper birch. North end contains more of the above species with lowland brush (tag alder and michigan holly. Mix of 25-50% and 50-75% canopy closure.			
Canopy Species		% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size	
Balsam Fir		10	Pole	8		Balsam Fir	Low	< 5 feet	Sapling	
Quaking Aspen		5	Pole	8		Tag Alder	Medium	10 - 20 feet	Tall Shrub	
Balsam Poplar		5	Pole	8		Michigan Holly	High	10 - 20 feet	Tall Shrub	
Northern White Cedar		35	Pole	7						
Black Ash		40	Pole	5	90					
Paper Birch		5	Pole	6						
5	6120 - Lowland Cedar	Poletimber Medium	23.8	127	Unspecified	N/A	The Tamarack areas are more open with more holly and tag alder understory. The more cedar areas of the stand have is more closed canopy, but the stand is more of a T-4 stand overall. There is paper birch component in stand, but only a trace.			
Canopy Species		% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size	
Tamarack		45	Pole	8		Balsam Fir	Low	< 5 feet	Sapling	
Black Spruce		5	Pole	8		Black Spruce	Low	< 5 feet	Sapling	
Northern White Cedar		50	Pole	8	127	Michigan Holly	High	5 - 10 feet	Tall Shrub

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments
-------	--------------------	--------------	-------	-----------	----------	--------------	------------------

34 6128 - Lowland Coniferous, Mixed Deciduous Poletimber Well 55.8 39 N/A

Stand was harvested in 1986. Low and high ground mix. Mix of timber, with young mixed trees with older spruce and cedar. Patchy timber, small diameter 2-3 sticks with some 4-5 stick. Nice cedar patches in the north end and another in the central part of stand, too small to map out.

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size
Paper Birch	10	Pole	5		Black Ash	Medium	10 - 20 feet	Sapling
Northern White Cedar	20	Pole	7		Tag Alder	High	5 - 10 feet	Tall Shrub
Black Spruce	20	Pole	7		Michigan Holly	Medium	5 - 10 feet	Tall Shrub
Black Ash	20	Pole	5					
Quaking Aspen	5	Pole	5					

35 4130 - Aspen Poletimber Well 19.8 26 Immature N/A

Stand treated in 1997.

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size
Balsam Fir	3	Pole/Sapling	5		Hazelnut (Beaked)	Medium	< 5 feet	Tall Shrub
Red Maple	20	Sapling	4		Balsam Fir	Medium	5 - 10 feet	Sapling
