

# Compartment Review Presentation

Gaylord Forest Management Unit

Compartment 52110

Entry Year 2026

Acreage: 2,776

County Emmet

Management Area: Emmet Moraines

---

**Stand Examiner:** Donald Stacks

**Legal Description:**

T37N R05W Sections 19, 21, 28 - 33.

**Identified Planning Goals:**

To provide for the protection, integrated management and responsible use of a healthy, productive, and undiminished forest resource base for the social, recreational, environmental, and economic benefit of the State of Michigan.

**Soil and topography:**

Blue Lakes loamy sand exists on upland northern hardwood stands in western 2/3 of compartment. There are many hills and steep slopes found in this area. Tawas and Carbondale mucks are found in the poorly drained swamp area in the eastern 1/3 of the compartment.

**Ownership Patterns, Development, and Land Use in and Around the Compartment:**

Residential homes and a few small operating farms can be found around the compartment boundary.

**Unique Natural Features:**

Red-shouldered hawk, bald eagle, osprey, loon, early hairstreak have been noted in or near Compartment 110. Douglas Stenelmis Riffle Beetle in Maple River just east of compartment boundary. There is also potential for goshawk, great blue heron rookery, calypso orchid, ram's head orchid, and limestone oak fern.

**Archeological, Historical, and Cultural Features:**

No Archeological, Historical, or Cultural Features known.

**Special Management Designations or Considerations:**

None listed.

**Watershed and Fisheries Considerations:**

This compartment is within the West Branch Maple River watershed, and contains several small tributaries to that river. The West Branch Maple River and its tributaries are designated trout streams, and are classified as warm-transitional (marginal) trout streams, susceptible to minor changes in temperature. A buffer zone (no clear-cutting) of 300' should be provided to discourage early successional species such as aspen.

**Wildlife Habitat Considerations:**

**Mineral Resource and Development Concerns and/or Restrictions**

The closest known active sand/gravel pit is less than one mile north, in Sec 20. There may be some potential for sand & gravel within the compartment on the uplands, but surficial sediments in the area appear to be dominated by sand and clay with less gravel. There does appear to be demand for construction aggregate material in the area. It is not known whether there is sufficient production and reserves from existing operations in the region to meet current demand or if there may be capacity for additional operations. The majority of past production has been from private land. There is no known potential for economic production of other minerals from within the compartment, and there has been no recent mineral leasing activity within the compartment.

**Vehicle Access:**

Access into the compartment can be gained by several county and numerous forest trail roads.

**Survey Needs:**

1 to 2 miles of survey work may be needed in areas prescribed for timber harvest.

**Recreational Facilities and Opportunities:**

Several portions of the designated snowmobile trail run through the compartment, as well as a small segment of the North Country Pathway.

**Fire Protection:**

The Indian River Field Office is located about 25 miles east of the compartment. The McKinley Township VFD is located about 8 miles to the east.

**Additional Compartment Information:**

The following reports from the Inventory are attached:

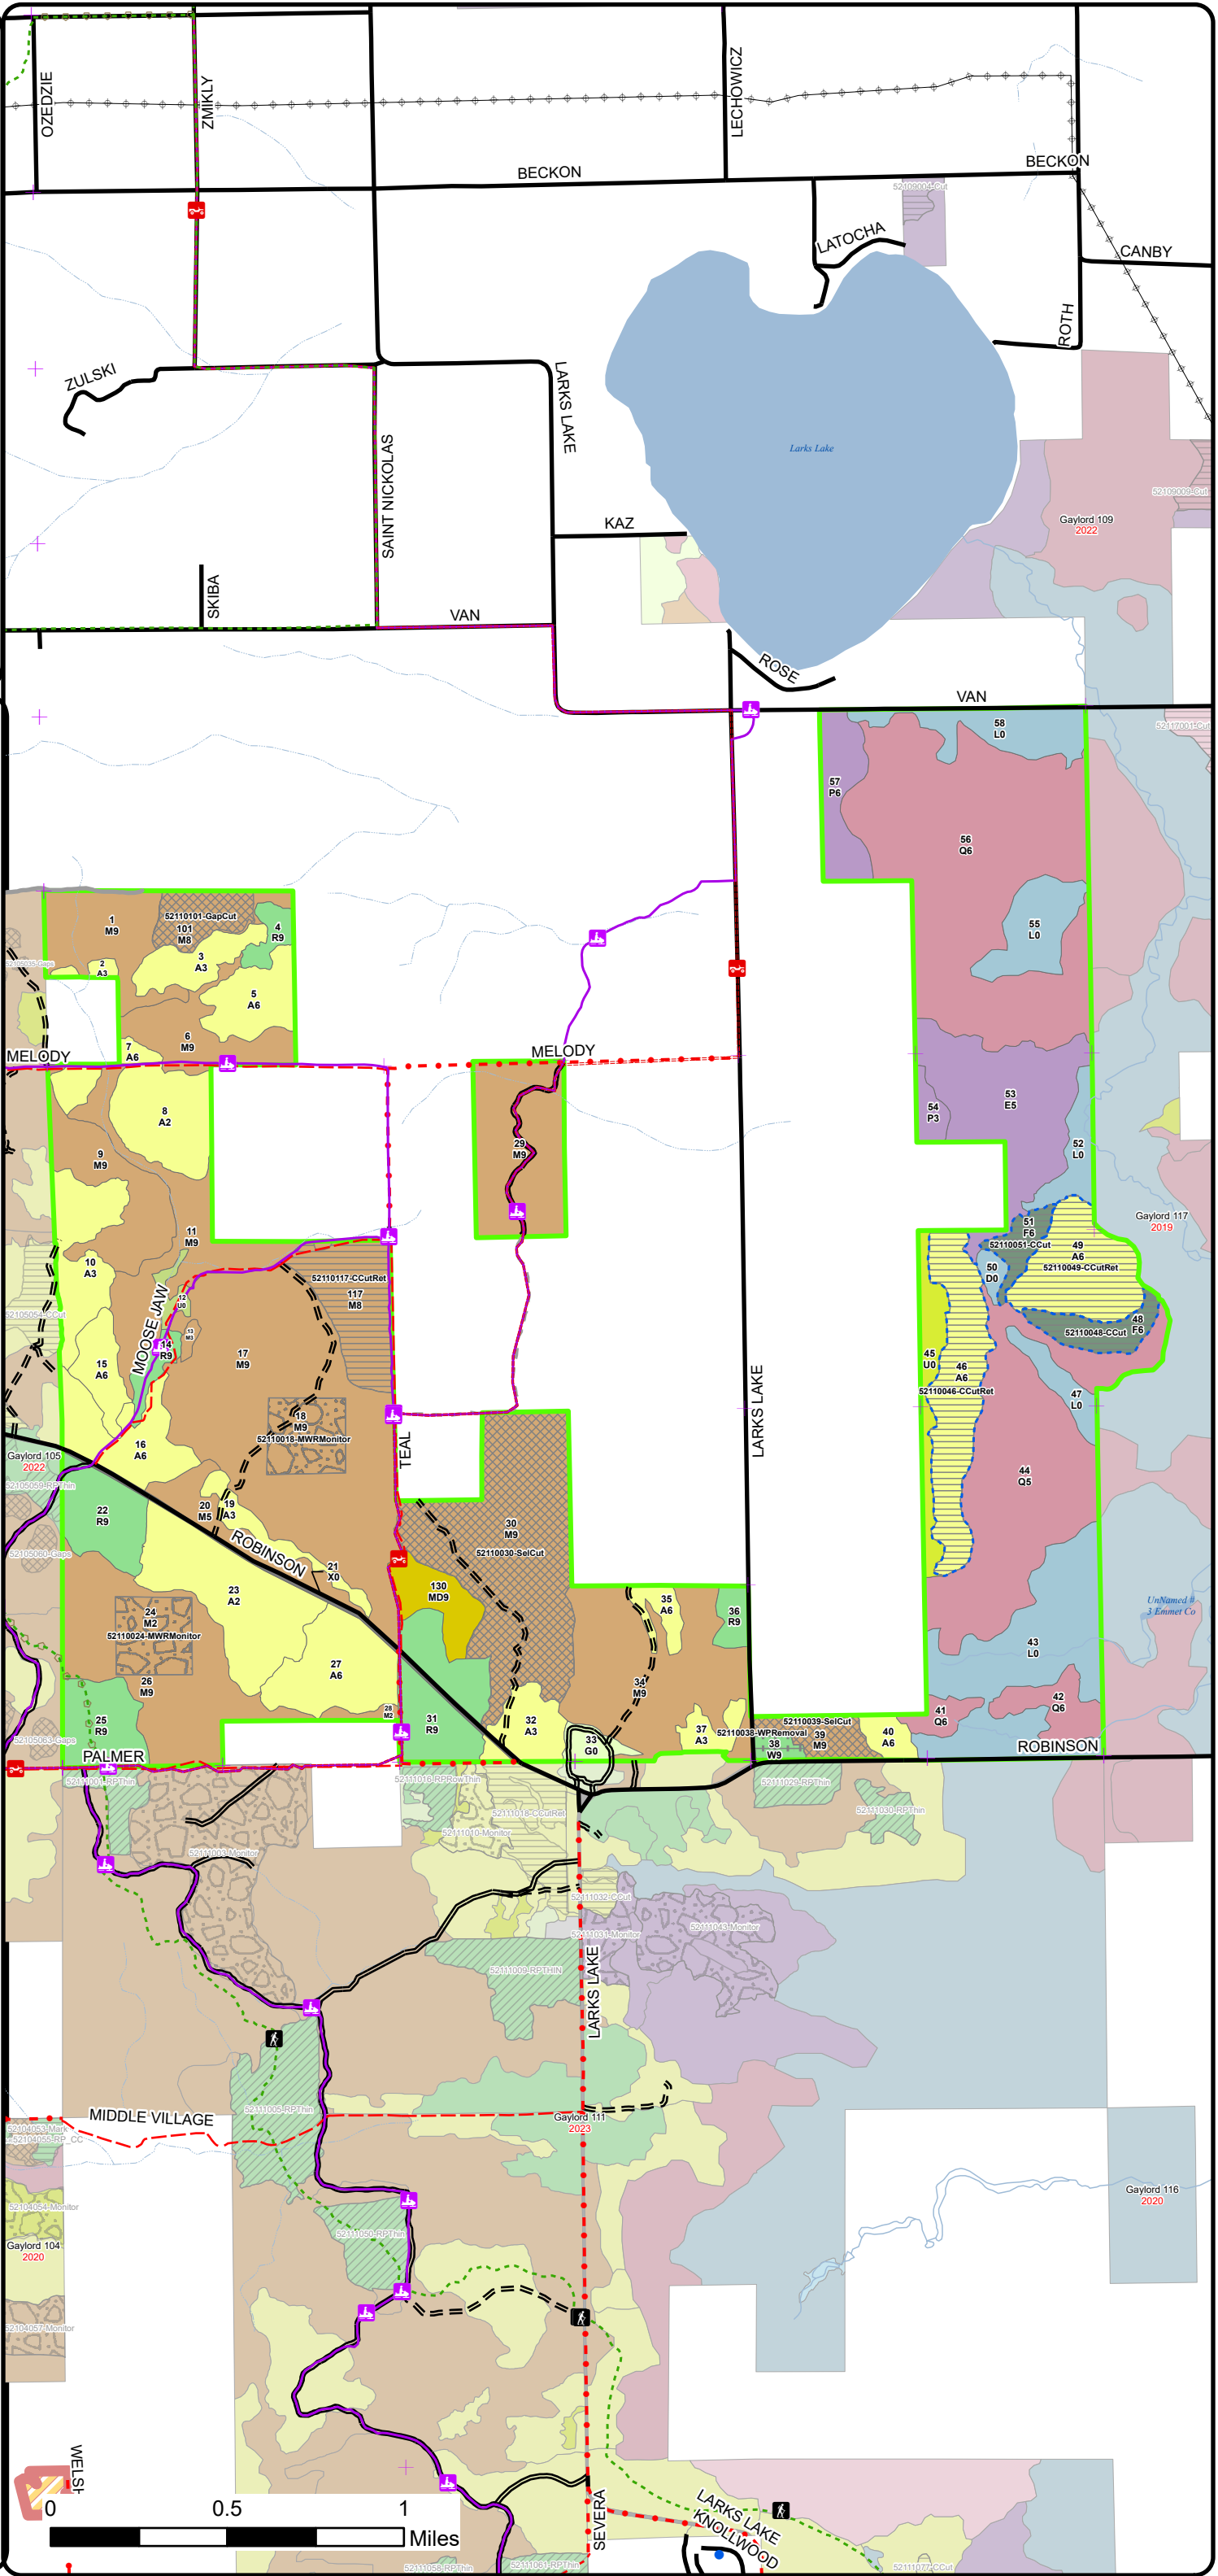

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

**Proposed Treatments:**

<b>18</b>	<b>52110018-MWRMonitor</b>	30.3	4110 - Sugar Maple Association	Sawtimber Well	100	51-80	Monitoring	Natural Regen (Intermediate)	411 - Northern Hardwood	Even-Aged	No
<p><u>Prescription</u> MWR harvest. Monitor regen.  <u>Specs:</u>  <u>Next Step</u>  <u>Treatments:</u>  <u>Acceptable</u> A diverse mix of northern hardwood species.  <u>Regen:</u>  <u>Other</u> Unit 1, MWR Gaylord Cluster 3 (52-104-17).  <u>Comment:</u>  <u>Site Condition</u>  <u>Proposed Start Date:</u> 10/1 /2025</p>											
<b>24</b>	<b>52110024-MWRMonitor</b>	30.3	4119 - Mixed Northern Hardwoods	Sapling Medium	6	Immature	Monitoring	Natural Regen (Intermediate)	411 - Northern Hardwood	Even-Aged	No
<p><u>Prescription</u> MWR harvest. Monitor regen.  <u>Specs:</u>  <u>Next Step</u>  <u>Treatments:</u>  <u>Acceptable</u> A diverse mix of northern hardwood species.  <u>Regen:</u>  <u>Other</u> MWR Gaylord Cluster 1, PU 1, (52-102-17),  <u>Comment:</u>  <u>Site Condition</u>  <u>Proposed Start Date:</u> 10/1 /2025</p>											
<b>30</b>	<b>52110030-SelCut</b>	161.6	4110 - Sugar Maple Association	Sawtimber Well	100	111-140	Harvest	Single Tree Selection	411 - Northern Hardwood	Even-Aged	No
<p><u>Prescription</u> A single tree selection harvest is prescribed this YOY. Mark stand to a post-harvest BA of 70 - 75 sq. ft. Do not mark white ash or beech for harvest. Release desirable crop trees and create a 100 - 150' canopy gap every 4 - 6 acres. Harvest aspen clones as part of the canopy gap area. A designated snowmobile trail is located on Teal Rd. Trail must be maintained in reasonable condition if used during harvest activity and be suitable for grooming by December 1. The trail may not be used by harvest equipment from December 1 to April 1. Do not damage or remove trail signs or markers. All stumps within 10' of the trail must be cut flush with the ground. There will also be no harvest activity during the barkslip season, unless written permission is granted by Gaylord Unit Supervisor. Protect seep areas, den trees and raptor nests.  <u>Specs:</u>  <u>Next Step</u> Monitoring, Natural Regen (Re-Inventory)  <u>Treatments:</u>  <u>Acceptable</u> A fully stocked stand of mixed northern hardwood, except for excessive white ash and beech regen.  <u>Regen:</u>  <u>Other</u>  <u>Comment:</u>  <u>Site Condition</u>  <u>Proposed Start Date:</u> 10/1 /2025</p>											

S  
t  
a  
n  
d

Treatment Name	Acres	Stand CoverType	Size Density	Stand Age	BA Range	Treatment Type	Treatment Method	Cover Type Objective	Age Structure	Habitat Cut
----------------	-------	-----------------	--------------	-----------	----------	----------------	------------------	----------------------	---------------	-------------

<b>38</b>	<b>52110038-WPRemoval</b>	6.3	42100 - Planted White Pine	Sawtimber Well	65	171-200	Harvest	Overstory Removal	4123 - Red Oak	Even-Aged	No
-----------	---------------------------	-----	----------------------------	----------------	----	---------	---------	-------------------	----------------	-----------	----

Prescription Cut all trees 2" or larger at DBH, except any incidental oak or hemlock, or any potential legacy tree 26"+ at DBH. No unharvested retention islands will be left on this sale because of the relatively small acreage being harvested, but mark 4 - 8 larger diameter white pine trees to leave unharvested. Limit number of skid trails to protect sugar maple understory from damage as much as possible during harvest. Do not cut any trees with a raptor nest, or obvious den trees found within the sale area. All tops should be chipped, unless market conditions prevent this, in which case, tops should be evenly scattered within the sale area. Include HRD specs.

Next Step Monitoring, Natural Regen (Intermediate); Pesticide, Skidder - Site Prep; Planting, Initial Plant; Monitoring, Artificial Regen(1yr);  
Treatments: Monitoring, Artificial Regen(3yr)

Acceptable Regen: Planted RO 2/3rds, 1/3 conifer at 8x8 spacing. Other desirable natural hardwood regen that is not ironwood, beech, or ash is acceptable. There are plans for a mechanical release at year 5.

Other Comment: Monitor natural regen after harvest. Use standard next step treatments for site prep, planting, herbicide application, and monitoring, as well as any re-planting needs. Plant red oak seedlings and possibly a lesser amount of mixed conifer species.

Site Condition

Proposed Start Date: 10/1 /2025

<b>39</b>	<b>52110039-SelCut</b>	19.0	4110 - Sugar Maple Association	Sawtimber Well	90	111-140	Harvest	Single Tree Selection	411 - Northern Hardwood	Even-Aged	No
-----------	------------------------	------	--------------------------------	----------------	----	---------	---------	-----------------------	-------------------------	-----------	----

Prescription A single tree selection harvest is prescribed this YOY. Mark stand down to a post-harvest stocking density BA of 70 - 75 sq. ft. Release desirable crop trees and create two or three 100 - 150' canopy gaps. No tree length skidding will be allowed. There will be no harvest activity during the barkslip season unless changed by written permission from the Gaylord Unit Supervisor. Protect den trees and raptor nests from harvest operations.

Next Step Monitoring, Natural Regen (Re-Inventory)  
Treatments:

Acceptable Regen: Mixed northern hardwood species, except for excessive white ash and beech regen.

Other Comment:

Site Condition

Proposed Start Date: 10/1 /2025

<b>46</b>	<b>52110046-CCutRet</b>	70.0	4130 - Aspen	Poetimber Well	54	51-80	Harvest	Clearcut with Retention	413 - Aspen	Even-Aged	No
-----------	-------------------------	------	--------------	----------------	----	-------	---------	-------------------------	-------------	-----------	----

Prescription Final harvest this YOY, cutting all trees two inches or larger DBH except black cherry, and incidental oak and hemlock. Also, do not cut any potential legacy trees of any species 26"+ DBH. Harvest only during winter (December 1 to April 1), or dry summer months, to protect landowner's roads and fields from hauling damage, and to help prevent excessive rutting on poorly drained soil within the sale boundary. Within the stand, create 2 - 4 .5 acre retention islands, located in poorly drained areas where possible. Include drumming log specs. Protect den trees and any raptor nests found. Also include Stands 48, 49, and 51 with this harvest contract, which most likely will require a portable bridge to reach these stands.

Next Step Monitoring, Natural Regen (Re-Inventory)  
Treatments:

Acceptable Regen: A moderately to fully stocked stand of mixed aspen/northern hardwood species.

Other Comment: Landowner permission required for access.

Site Condition Unknown Access

Proposed Start Date: 10/1 /2025

Standard

Treatment Name	Acres	Stand CoverType	Size Density	Stand Age	BA Range	Treatment Type	Treatment Method	Cover Type Objective	Age Structure	Habitat Cut
----------------	-------	-----------------	--------------	-----------	----------	----------------	------------------	----------------------	---------------	-------------

<b>48</b>	<b>52110048-CCut</b>	20.3	42330 - Upland Fir	Poletimber Well	75	51-80	Harvest	Clearcut	4134 - Aspen, Spruce/Fir	Even-Aged	No
<p><u>Prescription</u> Final harvest this Y.O.E. cutting all trees two inches or larger at DBH except incidental black cherry, oak, and hemlock. Also, do not cut potential legacy trees of any species 26"+ at DBH. A portable bridge will most likely be necessary to cross the wet area between Stand 46 and Stand 51, north of Stand 50. Harvest only during winter (December 1 to April 1) or dry summer months to protect landowner's roads and fields from hauling damage, and to help prevent excessive rutting on poorly drained soil within the sale boundary. No retention will be included in this smaller acreage stand. Include drumming log specs, and protect den trees and raptor nests found within sale boundary. Also include Stands 46, 49, and 51 on this harvest contract.</p> <p><u>Next Step</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Treatments:</u></p> <p><u>Acceptable Regen:</u> A moderately to fully stocked stand of mixed aspen/balsam fir.</p> <p><u>Other Comment:</u> Landowner permission is required for access.</p> <p><u>Site Condition</u> Unknown Access</p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>

<b>101 52110101-GapCut</b>	23.5	4110 - Sugar Maple Association	Sawtimber Medium	110	51-80	Harvest	Group Selection	4123 - Red Oak	Two-Aged	No
<p><u>Prescription</u> Two regeneration gaps between .5 – 5 acres will be created in lower stocked areas in the east half of the stand. Gaps will be identified on the ground and all trees 6' or taller, except any incidental hemlock and red oak, and any white pine larger than 26"+ DBH, will be removed from the gap.</p> <p><u>Specs:</u></p> <p><u>Next Step</u> Pesticide, Skidder - Site Prep; Other, ; Planting, Initial Plant; Monitoring, Artificial Regen(1yr); Monitoring, Artificial Regen(3yr)</p> <p><u>Treatments:</u></p> <p><u>Acceptable Regen:</u> Planted RO 2/3rds, 1/3 conifer at 8x8 spacing. Other desirable hardwood regen that is not ironwood, beech, or ash is acceptable. There are plans for a mechanical release at year 5.</p> <p><u>Other Comment:</u> Add this treatment to the Comp. 105 Gaps North timber sale (52-122-22), out of entry year. Incidental removal of trees between gaps will be required in many situations. Next steps include post-harvest cultivation site prep and replant.</p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2023</p>										
<b>117 52110117-CCutRet</b>	51.2	4112 - Maple, Beech, Cherry Association	Sawtimber Medium	100	51-80	Harvest	Clearcut with Retention	4116 - Mixed N. Hardwood - Aspen	Even-Aged	No
<p><u>Prescription</u> Harvest all trees 2" and greater at DBH, except any incidental hemlock, oak, and white pine. Leave one .7 acre uncut retention island near the north boundary of the stand containing white pine and hemlock. Protect any seeps from equipment damage within the sale boundary.</p> <p><u>Specs:</u></p> <p><u>Next Step</u> Monitoring, Natural Regen (Intermediate); Pesticide, Skidder - Site Prep; Planting, Initial Plant; Monitoring, Artificial Regen(1yr);</p> <p><u>Treatments:</u> Monitoring, Artificial Regen(3yr)</p> <p><u>Acceptable Regen:</u> A moderately to fully stocked stand of mixed aspen and northern hardwood species, except excessive beech and white ash regen.</p> <p><u>Other Comment:</u> Stand may possibly be supplemented with planted red oak and conifer species.</p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>										

**Total Treatment Acreage Proposed: 481.8**

## Report 5 – PROPOSED SPECIAL CONSERVATION AREA\* (SCA) DETAILS

\* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments
----------

**Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS**

\* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area  
HCVA = High Conservation Value Area  
SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Lake	A coldwater lake has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species to persist from year to year. Suitable conditions for coldwater fishes may occur in Michigan lakes if they are relatively deep, have substantial groundwater inflows, or are located in colder (northern) areas of the state. Such lakes are established by Director's action and designated as trout resources by Fisheries Order 200.
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.
SCA	Riparian Area	A transitional area between aquatic and terrestrial ecosystems in which the terrestrial ecosystem influences the aquatic ecosystem and vice-versa. Because of the unique conditions adjacent to lakes, streams and open water wetlands, riparian areas harbor a high diversity of plants and wildlife. Riparian communities are ecologically and socially significant in their effects on water quality and quantity, as well as aesthetics, habitat, bank stability, timber production, and their contribution to overall biodiversity.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments																																					
<b>1</b>	4110 - Sugar Maple Association	Sawtimber Well	50.5	110	81-110	N/A	High quality northern hardwood, mostly sugar maple sawtimber. Stand received a selection harvest (Melody Hardwood, 52-112-16) that was completed in 2021. All white ash and beech were also removed. Post-harvest BA is about 90 sq. ft. Adjacent to private ownership and private road to the north. Possible selection harvest in 20 years.

Beech		3	Sapling	2	27					
11	4112 - Maple, Beech, Cherry Association	Sawtimber Well	70.6	95	81-110	N/A	Lesser quality mixed northern hardwood stand, mostly sugar maple poletimber transitioning into sawtimber. Some larger diameters of various species present. Fairly heavy beech understory throughout the stand. The BA averages about 98 sq. ft. at present. Two spring-fed drainages run through this stand, with a site condition (3J, Water quality) applied to the adjacent forest cover, which slopes down to each drainage, to protect them from sedimentation occurring during an active timber harvest. A second site condition (2F, Too steep) exists within the southern 1/3 of the stand, in an area located on the side of a steep, east-facing slope, which is inoperable for harvest equipment. The southern-most portion of Stand 11 could potentially be treated when Stand 9 is harvested, possibly in ten years.

<b>29</b>	4110 - Sugar Maple Association	Sawtimber Well	81.2	100	81-110	N/A	Stand consists of northern hardwood sawtimber/poletimber (mostly sugar maple) on hilly terrain, with many steep slopes. Difficult truck/equipment access due to the existence of only one road (snowmobile trail) through the stand, that is located on steep terrain in places. The road is designated as private where it continues south of the stand onto private ownership. The best access for equipment would be through private property to the east, over more level terrain. Significant beech mortality from BBD, that has occurred over the last decade, mostly on the east side of the snowmobile trail. West side of trail more heavily stocked with mostly sugar maple sawtimber. Average BA on west side of road is about 110 sq. ft., around 100 to the east. No treatment prescribed due to topography and access issues.

Stand consists of a mix of lesser stocked red oak sawtimber, northern hardwood, and big-toothed aspen located mostly on the side of a steep, southwest facing slope. BA is approximately 60 sq. ft. Site condition 2F applied. Fairly dense understory of mostly beech and sugar maple. Too steep to harvest without excessive soil damage.
