

# Compartment Review Presentation

## Grayling Forest Management Unit

Compartment 72240

Entry Year 2026

Acreage: 1,754

County Crawford

Management Area: Camp Grayling

---

**Stand Examiner:** Scott McClarren

### Legal Description:

T27N, R3W, SEC. 1,12,13

### Identified Planning Goals:

The primary goal is to provide for military training while maintaining for health, productivity, species and structural diversity, and sustainability throughout the compartment. Management should facilitate military training while providing for multiple use opportunities for the public where it does not conflict with military training needs.

### Soil and topography:

The majority of this compartment is comprised of Grayling sands, 0 – 10% slopes. The East half of sections 12 and 13 have greater slope intensities ranging from 10 – 40%. The wetland areas within the compartment are mostly comprised of Dawson and Leafriver mucks.

### Ownership Patterns, Development, and Land Use in and Around the Compartment:

A majority of the compartment is state land except for some private parcels along the west edge of sections 1 and 13. Some parcels are State Military Board Lands while the remainder of state land in the compartment is under a long term lease (L-1479) with the Michigan National Guard, DMA to provide for military usage with no permanent buildings or improvements to be erected (Act 154, P.A., 1935). The compartment contains a portion of the Military's Range 30 impact area. This area is fully fenced and not open for public use. This compartment is adjacent to the eastern boundary of Hartwick Pines State Park.

### Unique Natural Features:

Kirtland's warbler (*Denroica kirtlandii*), Rough Fescue (*festuca scabrella*), Hill's thistle (*cirsium hillii*), and False-violet (*Dalibarda repens*) are known to exist, or have existed, in this compartment. Management activities taking place where these species have been recorded will take into account the requirements of these species.

### Archeological, Historical, and Cultural Features:

No Archeological, Historical, or Cultural Features known.

### Special Management Designations or Considerations:

A portion of the Range 30 Impact Area is located in the southeastern portion of the compartment. This area is closed to the public and is bounded by a fence. The area is posted and may contain hazardous ordinances from military use.

### Watershed and Fisheries Considerations:

The East Branch of the AuSable River is located ¼ mile to ¾ miles to the west of this compartment. No streams, rivers, or lakes are located within the compartment boundaries.

### Wildlife Habitat Considerations:

Compartment 240 has potential to sustain about 130 acres of Pine Barrens habitat in section one, depending on the amount of Military disturbance. The southeastern portion of the compartment has many mixed oak stands, providing mast and habitat for several species of wildlife, including game species such as whitetail deer, turkey, eastern gray squirrel, and fox squirrel. The remaining areas of the compartment have varying age classes of jack pine.

### Mineral Resource and Development Concerns and/or Restrictions

The compartment is within the Camp Grayling reservation area consisting of lands under a long-term lease granted to the State Military Board, and while the DNR maintains control over the mineral rights, all parcels in the compartment have been classified as non-development in the past. No known potential exists for commercial metallic mineral production in this part of the state. The State-owned Bud Hill Sand Pit is less than one mile east, and additional active pits are just over one mile south. The Bud Hill Sand Pit has not been recently leased and has not been recently evaluated for future production potential. There is potential for additional sand and gravel within the compartment, but any development would only be through a contract with the DMVA. The nearest oil & gas production, past or present, is at least four miles away. The compartment is south of the main Antrim Shale gas play. Only sparse oil & gas test drilling has occurred in and around the compartment, and no well permits have been issued recently in the area. Potential for development of hydrocarbons from beneath the compartment is considered low at this time.

**Vehicle Access:**

County Roads of Lewiston Grade and Jones Lake Road bisect the compartment. There are several trail roads leading off from the main county roads of this compartment. Most are used significantly by the military during summer months. These trail roads are also used readily by snowmobilers for non-groomed recreational trail riding during the winter months. A military tank trail also exists in sections 12 and 13 along the boundary of Range 30.

**Survey Needs:**

None at this time.

**Recreational Facilities and Opportunities:**

Designated snowmobile trail #47 (Grayling-Lovells Route) bisects the compartment, running along Lewiston grade, crossing Jones Lake road, then continuing along forest trail roads to the eastern boundary of the compartment.

**Fire Protection:**

There does not appear to be any immediate need for fire prevention activities in this compartment at this time. In the event a wildfire occurs within the compartment, there are several water sources for suppression needs to the north at Jones Lake, and to the west at the East Branch of the AuSable River.

**Additional Compartment Information:****The following reports from the Inventory are attached:**

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

**The following information is displayed, where pertinent, on the attached compartment maps:**

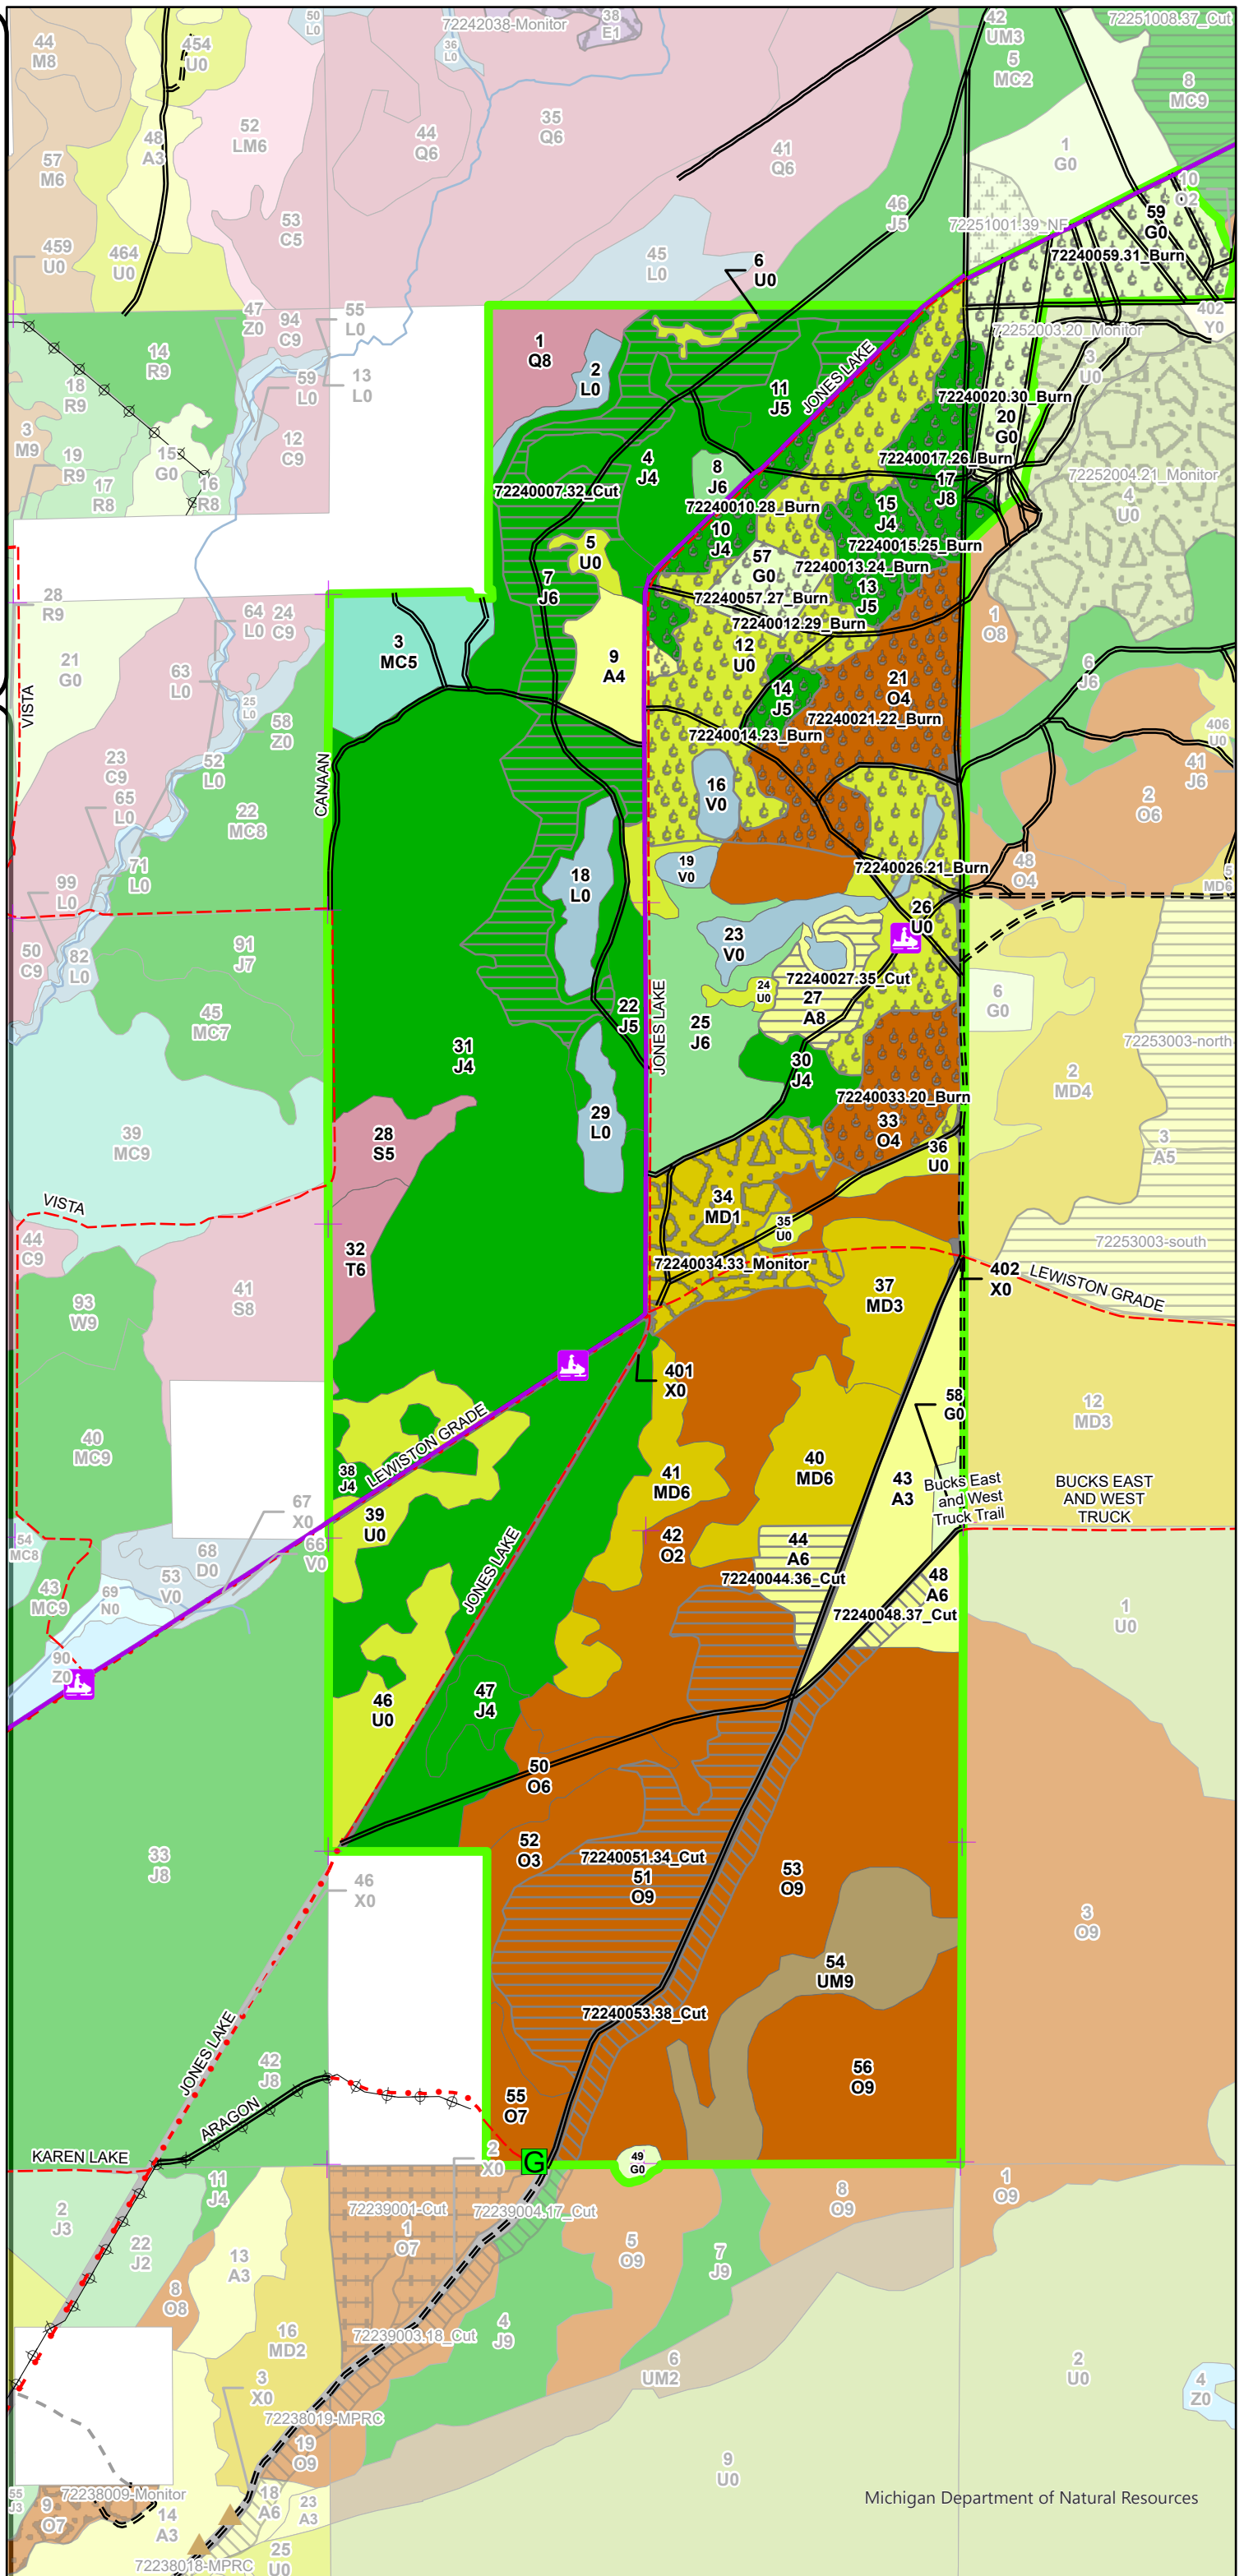

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

### Report 5 – PROPOSED SPECIAL CONSERVATION AREA\* (SCA) DETAILS

\* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

---

Comments

---

**Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS**

\* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area  
 HCVA = High Conservation Value Area  
 SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.
SCA	Research and Military Areas	These areas provide facilities and lands specifically dedicated for research, or other purposes. They include the 5,847 acre Forest Fire Experiment Station, the 12,000 acre Houghton Lake Wildlife Research Area, the Beaver Islands Archipelago Wildlife Research Area (that includes most of Garden Island, all of High and Hog Islands, all state owned land on Beaver, South Fox and North Fox Islands), the Cusino Wildlife Research Area, the 3,000 acre Hunt Creek Fisheries Research Station, the 125 acre Wyman Nursery, and over 144,000 acres of Military Lands.
SCA	Riparian Area	A transitional area between aquatic and terrestrial ecosystems in which the terrestrial ecosystem influences the aquatic ecosystem and vice-versa. Because of the unique conditions adjacent to lakes, streams and open water wetlands, riparian areas harbor a high diversity of plants and wildlife. Riparian communities are ecologically and socially significant in their effects on water quality and quantity, as well as aesthetics, habitat, bank stability, timber production, and their contribution to overall biodiversity.
HCVA	Natural Rivers	There are two Natural Rivers datasets which are derived from spatial buffers set from an established and approved distance from the river centerlines. The Natural Rivers Zoning District is a 400 foot buffer for most Natural Rivers. The Vegetative Buffer ranges from 25 to 100 feet.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments																																																								
1	6128 - Lowland Coniferous, Mixed Deciduous	Sawtimber Medium	19.3	84	51-80	N/A	Stand changes from open tamarack, tag alder, and closed spruce/cedar depending on where you are. Ankle deep water most places when assessed in the fall. Didn't walk south half of stand. Old comments- Stand has a few open areas full of tag alder. The majority of the white cedar is in the southern half of the stand, black spruce and tamarack are more dominant in northern part of the stand. A few spots in the stand look to be very wet.

							Old comments- Some dense and open pockets of jack pine along Jones Lake Rd. Stand borders two different lowland shrubs areas.																																				

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments																																																																				
23	6225 - Bog	Nonstocked	12.9		Unspecified	No	Mostly grass in east with standing water in places and transitions to blueberrybog in the west. Connected to small tag alder lowland inside stand 27.  Old comments- Oval shaped bog, surrounded by dense jack pine. Standing snags throughout the bog with some jack pine seeding in from the edges.																																																																				
24	330 - Low-Density Trees	Nonstocked	2.5		Immature	No	Cherry shrubs and a few scattered sapling/pole sized jack pine trees.																																																																				
25	42120 - Planted Jack Pine	Poletimber Well	41.3	57	51-80	N/A	Changed stand age from 1960 to 1967 origin to reflect planted stock. Also changed stand from natural to planted. Stand in the 51-80 ba range in the north and 81-110 range in south.  Old comments- Stand has a few small pockets of trees declining, budworm damage was observed in some areas of the stand. Old imagery shows a wildfire went through the area in the 1950's. Most of the stand either came back naturally or was planted very dense resulting in tall, small diameter trees. Some larger diameter trees are found where the tree density is lower. Some open strips through the stand, most likely from military traffic.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments																																				
<b>42</b>	4126 - White, Black, N. Pin Oak	Sapling Medium	79.8	15	Immature	N/A	Oak has recruited above browse height and stand has met regen objective for fully stocked oak/maple. A few red and jack pine seen, but not enough to include in canopy data. North side of stand is heavier to red maple. Stand will grow into O3 by next entry. Kept stand age at 2009 harvest (see old comment).  Old comments- Overstory was removed in 2017 (#625-16), cutting merch stems. Stand had been Shwd-Seed harvested in 2009 (#622-06), leaving 40-50 BA in oak; subsequent Rx burn to set back RM was cancelled. Inventory noted a good amount of oak regeneration. Post-harvest canopy data roughed in from sub-canopy data. As regen from the overstory removal establishes, may swap majority age from the 2009 harvest to the 2017 one.																																				
<table border="1"> <thead> <tr> <th>Canopy Species</th> <th>% Cover</th> <th>Size Class</th> <th>DBH</th> <th>Age</th> </tr> </thead> <tbody> <tr> <td>White Oak</td> <td>30</td> <td>Sapling</td> <td>2</td> <td></td> </tr> <tr> <td>White Pine</td> <td>2</td> <td>Sapling</td> <td>2</td> <td></td> </tr> <tr> <td>Red Maple</td> <td>38</td> <td>Sapling</td> <td>3</td> <td>15</td> </tr> <tr> <td>Black/Red (Hybrid) Oak</td> <td>30</td> <td>Sapling</td> <td>2</td> <td></td> </tr> </tbody> </table>		Canopy Species	% Cover	Size Class	DBH	Age	White Oak	30	Sapling	2		White Pine	2	Sapling	2		Red Maple	38	Sapling	3	15	Black/Red (Hybrid) Oak	30	Sapling	2
