

Compartment Review Presentation

Gwinn Forest Management Unit

Compartment 32044

Entry Year 2026

Acreage: 1,937

County Marquette

Management Area: Suomi Till and Outwash Plain

Stand Examiner: Matt Yeo

Legal Description:

T44N R25W Section(s) 20, 21, 22

Identified Planning Goals:

To maintain the health and sustainability of the forest while providing for recreational, wildlife and fisheries concerns.

Soil and topography:

Most of this compartment is gently rolling uplands of Rubicon, Croswell and Rousseau-Ocqueoc sands and level swamps of Carbondale and Tawas mucks.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

Mostly State owned, with isolated hunting camps in and around compartment.

Unique Natural Features:

No Unique Natural Features known.

Archeological, Historical, and Cultural Features:

There are known concerns within the compartment. All proposed management activities have taken these concerns into consideration.

Special Management Designations or Considerations:

Some potential for pearlwort or Cooper's mild-vetch along rocky portions of Escanaba River. Some potential for submergent and emergent marsh species creek and along river: auricled tway-blade, autumnal water starwort, alternate-leaved water-milfoil, Farwell's water-milfoil, linear-leaved gentian, and veiny meadow-rue.

Watershed and Fisheries Considerations:

This compartment contains Bobs Creek and the Main Branch Escanaba River. Bobs Creek is a designated Type 1 trout stream less than 50-ft wide and has a predicted mean July temperature of 64.2 °F (cold stream). A 300-foot buffer is recommended for Bobs Creek in riparian areas susceptible to Aspen regeneration. For areas not susceptible to Aspen regeneration, a minimum 100-foot, plus 5 feet per 1% increase in slope, buffer is recommended to protect these areas in accordance with Best Management Practices.

The Main Branch Escanaba River is a designated Type 1 trout stream greater than 50-ft wide and has a predicted mean July temperature of 69.6 °F (cool stream). A minimum 100-foot, plus 5 feet per 1% increase in slope, buffer is recommended for the Main Branch Escanaba River to protect riparian areas in accordance with Best Management Practices.

Wildlife Habitat Considerations:

This compartment is found within the Soumi Till and Outwash Management Area, on a Disintegration Moraine in Southwestern Marquette County. The dominant Natural Communities are dry mesic northern forests, poor conifer swamps, and mesic northern forests. This management area offers opportunities to increase diversity and perhaps long-term oak sustainability through under planting white and red pine. Another priority is to maintain or increase wildlife corridors especially along riparian corridors. Wildlife management issues in the management area are mast (hard and soft); habitat fragmentation; mature forest conditions; mesic conifer; coarse woody debris; and retention or development of large living and dead standing trees (for cavities). This management area represents approximately ¼ of the oak resource on WUP state forest.

The following have been identified as featured species for the Soumi Till and Outwash Management Area: Blackburnian Warbler, Golden-winged Warbler, Kirtland's Warbler, Red Crossbill, Black-backed Woodpecker, Ruffed Grouse, American Marten, White-tailed Deer, Black Bear.

Mineral Resource and Development Concerns and/or Restrictions

Sections 20 - 22, T44N-R25W, Marquette County

Surface sediments consist of peat and muck. There is insufficient data to determine the glacial drift thickness. The Cambrian Trempealeau Formation subcrops below the glacial drift. The Trempealeau could be used for stone. Gravel pits are located four miles to the northwest, and potential is limited. Abandoned iron mines are located three miles to the northeast. This area has not been previously leased. There is no economic oil and gas production in the UP.

Vehicle Access:

Good access overall, although some routine maintenance/better improvement would be desirable on Bob's Creek Truck Trail.

Survey Needs:

Private 40 in Section 21 SWNW.

Recreational Facilities and Opportunities:

No established recreational facilities, although hunting and fishing are popular in this compartment. Several dispersed campsites can be found along the Escanaba River, which receives a lot of use by canoes.

Fire Protection:

Some drier soil types here and nearby camps, river campsites indicate a higher fire frequency. Old fire plow lines are visible in areas.

Additional Compartment Information:

Some old logging grades in the area.

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

------------	----------------	-------	-----------------	--------------	-----------	----------	----------------	------------------	----------------------	---------------	-------------

Proposed Treatments:

50	32044050-Cut	15.1	42110 - Planted Red Pine	Poletimber Well	33	81-110	Harvest	Systematic Thinning	4211 - Planted Red Pine	Even-Aged	No
<p><u>Prescription</u> Thin red pine in a systematic row thinning, take one row and leave two, taking out 1/3 of the basal area. Areas where white pine are present, mark around white pine for operability. Extra trees can be marked for operability if needed. Also retain most black cherry for their soft mast crop and retain some healthy white spruce for seed production and wildlife cover.</p> <p><u>Specs:</u></p> <p><u>Next Step</u> <u>Treatments:</u></p> <p><u>Acceptable</u> N.A. <u>Regen:</u></p> <p><u>Other</u> <u>Comment:</u></p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>											
53	32044053-Cut	7.8	4112 - Maple, Beech, Cherry Association	Sawtimber Well	97	111- 140	Harvest	Single Tree Selection	411 - Northern Hardwood	Uneven- Aged	No
<p><u>Prescription</u> Mark stand to 70-90 BA. Focus on marking poorer quality trees. This treatment is meant to focus on releasing better quality crop trees for future growth and to encourage diversity. Leave Cedar, Hemlock, White Pine. Favor to keep cherry to maintain species diversity.</p> <p><u>Specs:</u></p> <p><u>Next Step</u> Monitoring, Natural Regen (Re-Inventory) <u>Treatments:</u></p> <p><u>Acceptable</u> Any tree species currently in the overstory is acceptable. <u>Regen:</u></p> <p><u>Other</u> <u>Comment:</u></p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>											
56	32044056-Cut	8.0	4119 - Mixed Northern Hardwoods	Sawtimber Well	103	111- 140	Harvest	Single Tree Selection	411 - Northern Hardwood	Uneven- Aged	No
<p><u>Prescription</u> Mark stand to 70-90 BA. Focus marking on poorer quality trees. This treatment is meant to focus on releasing better quality crop trees for future growth and to encourage diversity. Leave Cedar, Hemlock, White Pine. Also favor to keep some large basswood (for cavity nestors, pollinators, and seed production) and some cherry to maintain species diversity.</p> <p><u>Specs:</u></p> <p><u>Next Step</u> Monitoring, Natural Regen (Re-Inventory) <u>Treatments:</u></p> <p><u>Acceptable</u> Any tree species currently in the overstory is acceptable. <u>Regen:</u></p> <p><u>Other</u> <u>Comment:</u></p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>											

Approved Treatments:

7	32044007.6_C ut	28.4	42210 - Natural Red Pine	Poletimber Well	71	111- 140	Harvest	Group Selection	4319 - Mixed Upland Forest	Even-Aged	No
<p><u>Prescription</u> Cut all aspen, jack pine and fir. Mark all other trees for removal with a target residual BA of 70-90 SF. Remove trees of poor form, suppressed trees, make gaps in areas of regeneration, improve spacing, improve diversity through tree selection. Favor red pine, white pine and spruce when marking. White pine will be favored to provide black bear habitat.</p> <p><u>Specs:</u></p> <p><u>Next Step</u> Monitoring, Natural Regen (Re-Inventory) <u>Treatments:</u></p> <p><u>Acceptable</u> aspen, jack pine, spruce, fir, red maple, white pine, and red pine. <u>Regen:</u></p>

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres

Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
HCVA = High Conservation Value Area
SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Lake	A coldwater lake has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species to persist from year to year. Suitable conditions for coldwater fishes may occur in Michigan lakes if they are relatively deep, have substantial groundwater inflows, or are located in colder (northern) areas of the state. Such lakes are established by Director's action and designated as trout resources by Fisheries Order 200.
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.
SCA	Riparian Area	A transitional area between aquatic and terrestrial ecosystems in which the terrestrial ecosystem influences the aquatic ecosystem and vice-versa. Because of the unique conditions adjacent to lakes, streams and open water wetlands, riparian areas harbor a high diversity of plants and wildlife. Riparian communities are ecologically and socially significant in their effects on water quality and quantity, as well as aesthetics, habitat, bank stability, timber production, and their contribution to overall biodiversity.
ERA	Ecological Reference Areas	Ecological Reference Areas (ERAs) are high quality examples of natural communities that have been identified as Element Occurrences (EOs) by the Michigan Natural Features Inventory (MNFI) within the context of their natural community classification system. Element Occurrences with viability ranks of A (Excellent) or B (Good) and a Global (G) or State (S) element (rarity) ranking of endangered (1), threatened (2), or rare (3) serve as an initial base of ERAs. They may be located upon any ownership in the State. The system is comprised of individual or associations of natural community types that are managed for restoration and maintenance of natural ecological processes and values. The public may submit recommendations for lands as ERAs using the DNR Conservation Area Recommendation Form.

"Bob's Creek Sale" #018-96 - cut fall, 1999 - Jan, 2000. Mixed regeneration obtained - a lot of 5-10' white and red pine regen along road/burn lines where mineral soil was exposed and 3-5' white pine elsewhere. East part of stand has heavier aspen regen component; more W7/A3 and some white pine regeneration. Heavier spruce/fir edges along south side, dropping into lower type, and more hemlock to the north. Good mix of species. 2014

Trace amount of paper birch (pulp/log). 2024

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments
-------	--------------------	--------------	-------	-----------	----------	--------------	------------------

16	6120 - Lowland Cedar	Poletimber Medium	11.9	101	81-110	N/A	Cedar under spruce/tamarack. Quite a bit of blowdown/uprooting especially near adjacent harvest boundary.
-----------	----------------------	-------------------	------	-----	--------	-----	---

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size
Black Spruce	5	Log/Pole	10		Balsam Fir	Medium	< 5 feet	Seeding
Tamarack	5	Log/Pole	10		Tag Alder	Low	5 - 10 feet	Tall Shrub
Northern White Cedar	90	Pole/Log	9	101	Black Ash	Medium	10 - 20 feet	Sapling

17	4311 - Pine, Aspen Mix	Sapling Medium	25.5	110	1-50	N/A	Stand Harvested under "Bob's Creek Sale" #018-96 - cut fall, 1999 - Jan., 2000. Post harvest the Stand was treated with prescribed burn 5/22/2006 (C32-633); prescribed to be light burn to reduce maple, spruce competition and prepare seedbed for white and red pine regeneration. Site was also re-burned Sept, 8-9-2011 (32-720) to reduce more competition, prepare seedbed. Whin site was checked after the burn in 2023 the assessment was that the burn appeared to have been too hot and a failure to achieve these objectives - no regeneration present, other than a trace of red maple, aspen clumps, and overstory white pine is only 15-20% live with the remainder dead/dying. Heavy sedge, grasses, raspberry, mullein ground cover about the only thing present. Heavy char on tree boles.
-----------	------------------------	----------------	------	-----	------	-----	--

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size
White Pine	10	Sapling	4		Balsam Fir	Low	< 5 feet	Sapling
White Pine	35	XLog/Log	18	110	White Spruce	Low	< 5 feet	Sapling
Jack Pine	2	Pole/Sapling	5	11	White Pine	High	< 5 feet	Seeding
Paper Birch	8	Sapling	1	11				
Quaking Aspen	20	Sapling	1	11				
Bigtooth Aspen	5	Sapling	1	11				
Red Maple	20	Sapling	1	11				

A regeneration walk though in 2024 showed a fully forested stand with a mix of species white pine seedlings where prominent though outnumbered by aspen and maple. Also, of note where the presence of a significant amount of paper birch seedlings likely a result of the burn. While more natural pine would have likely been a desirable result though the burns likely contributed to the current prevalence of white pine seedlings in the stand. Some older, slightly larger aspen present. Trace the amount of cherry and black spruce. Great subcanopy white pine regeneration 2024

18	6124 - Lowland Spruce-Fir	Sapling Medium	25.9	24	Immature	N/A	"Flowing Spring Sale" #020-96 (Unit 3) - cut summer/fall, 1999. Some residual white pine, fir. Thicker S/F/T regeneration closer to north retention buffer strip. Wetter and fairly rutted near cedar type edge - more tamarack, grasses, cattails noted. Average seedling heights = 5 - 20'. This stand, for the most part, is a transition between upland and lowland. Trace amount of cherry and cedar. 2024

41	4319 - Mixed Upland Forest	Sapling Well	10.3	13	Immature	N/A	"Bob's Creek Road Sale" (unit 5) #008-06 - cut Feb, 2009. Patch clumps of spruce/fir (10- 20' hts) from original stand, and also residual spruce, tamarack, cedar, and white pine (pole - log size) within. Stand is in process of regeneration - should be sufficiently stocked (note 1-2' regen hts). (2014)

10/21/13: "Highbanks West" #030-86 - seed tree cut 1991 (for birch). FTP32-402: for scarification (MO = birch). FTP32-495 - hand planting of 2-0 RP w/herbicide (Velpar) 1992. Birch trees had all died and site was nearly all raspberry, per TMS note - conversion was approved. Now transitioning from saplings to poles. Some natural regeneration also.

5/13/24: Red pine dominant, mainly poles, some saplings. Good amounts of red maple and cherry in the understory. Some wet areas with standing water. Trace amounts of tamarack. Some scattered more open areas with less stocking, very few scattered red pine logs. Cherry, paper birch, and red maple are scattered all along the road and stand edge. Stand could use a thinning, dense stocking, has never been cut. Stand is ready to be thinned at anytime, but due to small acreage and low volume could consider waiting and treating with a larger stand.

Scattered residual white pine and white spruce. Very mixed upland stand. 10 - 20 ' ht regeneration of S/F, white pine; some 1' cedar ground cover.5/8/24: Old trail/road runs through stand, good amount of white spruce saplings along trail. Pockets of dead spruce/fir, budworm evidence. Aspen sap/pole dominant, lots of saplings near pole size. Few scattered cherry, red pine, white pine, black ash, trying to grow in wet areas. Areas of standing water, tag alder in some wet areas, less stocking in wet areas. Road into stand was flooded out in several spots. Trace amounts of tamarack, black ash. Good conifer component in understory. Few large diameter aspen mixed in.

White Pine	2	Pole	5					

Trace amount of sapling jack pine, tag alder and pole sized red pine. This stand is half upland and half lowland. Very diverse stand. Upland areas are a poor-quality site and low areas have seeps and look to be quite wet. Some areas of lower stocking found in the north Size can be quite variable in this stand.
