

Compartment Review Presentation

Gwinn Forest Management Unit

Compartment 32223

Entry Year 2026

Acreage: 797

County Marquette

Management Area: Suomi Till and Outwash Plain

Stand Examiner: Jacob Siler

Legal Description:

T46N R29W, Sections 13 & 14.

Identified Planning Goals:

Diversify age/size classes amongst lowland stands.

Soil and topography:

Surface sediments consist of coarse-textured glacial till. The topography ranges from level swamps with islands of rock outcrop/highlands within, level wetland drainages and creek bottoms, to rolling or only slightly hilly upland terrain.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

State ownership within this area is a scattered checkerboard arrangement. Corporate forest holdings surround state land along with some large blocks of private ownership as well. Development is very limited with a few seasonal hunting camps here and there. Production of forest products along with recreational activities such as hunting, trapping and snowmobiling make up the land uses in the compartment.

Unique Natural Features:

The large treed bog complex within Section 13 is very unique with numerous rock outcrop islands scattered throughout.

Archeological, Historical, and Cultural Features:

No Archeological, Historical, or Cultural Features known.

Special Management Designations or Considerations:

Stand 36 and 34 are designated as reviewable SCAs for potential old growth.

Watershed and Fisheries Considerations:

This compartment contains headwater reaches of the West Branch of the Middle Branch Escanaba River. The West Branch of the Middle Branch Escanaba River is a designated Type 1 trout stream less than 50-ft wide and has a predicted mean July temperature of 61.0 °F (cold stream). A 300-foot buffer is recommended for the West Branch of the Middle Branch Escanaba River in riparian areas susceptible to Aspen regeneration. For areas not susceptible to Aspen regeneration, a minimum 100-foot, plus 5 feet per 1% increase in slope, buffer is recommended to protect these areas in accordance with Best Management Practices.

Wildlife Habitat Considerations:

This compartment is found within the Soumi Till and Outwash Management Area, on a Disintegration Moraine in Southwestern Marquette County. The dominant Natural Communities are dry mesic northern forests, poor conifer swamps, and mesic northern forests. This management area offers opportunities to increase diversity and perhaps long-term oak sustainability through under planting white and red pine. Another priority is to maintain or increase wildlife corridors especially along riparian corridors. Wildlife management issues in the management area are mast (hard and soft); habitat fragmentation; mature forest conditions; mesic conifer; coarse woody debris; and retention or development of large living and dead standing trees (for cavities). This management area represents approximately ¼ of the oak resource on WUP state forest.

The following have been identified as featured species for the Soumi Till and Outwash Management Area: Blackburnian Warbler, Golden-winged Warbler, Kirtland's Warbler, Red Crossbill, Black-backed Woodpecker, Ruffed Grouse, American Marten, White-tailed Deer, Black Bear.

Mineral Resource and Development Concerns and/or Restrictions

Surface sediments consist of coarse-textured glacial till. The glacial drift thickness varies between 50 and 100 feet. The Precambrian Archean Granite/Gneiss subcrops below the glacial drift. This rock could be used as a building or dimension stone. Gravel pits are not located in the area, but potential may be good. The abandoned Republic iron mine is located to the west. This compartment has not been leased for metallic exploration recently. There is no economic oil and gas production in the UP.

Vehicle Access:

The only vehicle access that exists is a gated two track off of County Road FF that heads into the southwest part of the compartment.

Survey Needs:

No survey needs are required for this year of entry.

Recreational Facilities and Opportunities:

No developed recreational facilities exist within this compartment. Activities that do occur within this compartment include hunting, berry picking, hiking, fishing and trapping.

Fire Protection:

This compartment is included within the "581 Zone Dispatch" area which provides for a pre-planned dispatch of specified fire equipment from within the Gwinn and Crystal Falls Management Units. This dispatch is dependent on the severity of forecast burning conditions for the specified day. Areas of jack pine and red pine cover types with the encroachment of recreational seasonal dwellings have warranted this pre-planning. Mutual aide agreements with local township volunteer fire departments also provide critical fire suppression response, especially in the area of structure fire and/or protection, and evacuations. It is worth mentioning that the numerous islands within the treed bog complex have a fire history as evidenced by old lightning scars, charred stumps and the presence of paper birch.

Additional Compartment Information:**The following reports from the Inventory are attached:**

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Comments:							
7	Unavailable	2H: Blocked by physical obstacle (e.g. upland stand in a lowland area)	8	2E: Road needed	Unspecified	Unspecified	Unspecified
Comments: Would have to freeze across stagnant black spruce type ground. Most of the good quality/higher basal area spruce areas are on the south side along the stream. The stand gets thinner and wetter as you go to the northwest. I don't see this being financially feasible given all the factors.

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
 HCVA = High Conservation Value Area
 SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.
SCA	Type 1 and Type 2 Old Growth	Old-Growth forest (also termed primary forest, ancient forest, virgin forest, or primeval forest) is an area of forest that has few or no signs of human disturbance and that exhibits unique ecological features related to age, composition and associated structure. Old growth forests are of natural origin. They may be dominated by late successional forest species (i.e. sugar maple and American beech), or may be a very old example of a stand dominated by long-lived early- or mid-seral species (i.e. oak, or red pine).
SCA	Riparian Area	A transitional area between aquatic and terrestrial ecosystems in which the terrestrial ecosystem influences the aquatic ecosystem and vice-versa. Because of the unique conditions adjacent to lakes, streams and open water wetlands, riparian areas harbor a high diversity of plants and wildlife. Riparian communities are ecologically and socially significant in their effects on water quality and quantity, as well as aesthetics, habitat, bank stability, timber production, and their contribution to overall biodiversity.

						Size	
35	6122 - Black Spruce	Sawtimber Well	8.0	97	81-110	N/A	Variable BA with blowdown pockets throughout. Trace amount of birch. Stand gets thinner to the north. Stream on south side. 100 percent canopy closure on south side and 50 percent on north side. Unfortunately, much of the good quality stuff is within stream buffer.

36	429 - Mixed Upland Conifers	Sawtimber Well	25.4	120	81-110	N/A	Large super canopy white pine and red pine with a sparse understory of red maple and paper birch. Paper birch is falling out. Lots of standing dead balsam fir. Super canopy white pine large as 29 inches and probably a bit older. This is transitioning into an uneven-aged stand as birch and balsam fall out and are replaced.
