<ul> <li>Unless otherwise specified, the tally sheets used must be those provided by the Forest, Mineral and Fire Management Unit.</li> <li><u>RESTRICTIONS</u></li> <li>1. Forest, Mineral and Fire Management Division must to be able to identify who did what on the timber sale.</li> <li>2. The contractor may not have more than two markers in one payment unit without prior approval.</li> <li>3. Each marker should have an assigned area to mark (not strips).</li> </ul>								
3. Each marker should hav			ior approval.					

## Grayling Management Unit Boundary Marking and Area Calculation

- 1. The attached type map delineates the contract marking area.
- 2. Marking must be done in dry weather and when tree surfaces are not wet.
- 3. Paint the boundary line in such a way that it can be seen from both the inside of the sale area and when walking along the line from either direction (two sides). Each boundary line tree must be stump-marked at the base of the stump (one side) between the roots extending all the way to the ground.
- 4. Paint a unit line which will constitute the payment unit boundary, dividing the sale into payment units, as shown on the attached map.
- 5. Place marks approximately six feet above the base of the tree.
- 6. The contractor will keep track of total quarts of paint used per sale by color.
- 7. The contractor will use a GPS unit to determine enclosed acreage to the nearest one-tenth acre, unless an alternative method is approved prior by Unit Management.
- 8. GPS units used must be compatible with Pathfinder Office (2.01 or later) and capable of producing a Trimble .cor file format. Supply a disk and paper copy of the corrected and edited (outlier/erroneous points cleaned up) traverse file.
- 9. Position Mode must be set so that the GPS receiver collects data from a minimum of four satellites. This must be recorded in the position properties window after downloading.
- 10. The GPS receiver must log PDOP. This log must be recorded in the position properties window after downloading.
- 11. PDOP mask must be less than or equal to 8.
- 12. SNR setting must be greater than or equal to 4.
- 13. Sale boundaries are to be recorded as an area feature, not a line. Isolated stands must each be recorded as separate area features.
- 14. Payment Unit lines must be recorded as a line feature bisecting the sale.

## Grayling Management Unit Timber Cruising Specifications

- 1. Cruise designated timber using Appendix 8 Product Standards to determine products and heights of products. Separate cruise data by species/product. Appendix 8 will be provided upon request.
- 2. Cruise at the sampling intensity specified in the Timber Sale Prescription and apply that rate to your actual GPS'd stand acreage.
- 3. Separate cruise data by stand.
- 4. Use a 10-factor prism.
- 5. Mark location of plots on the map, using the plot number.
- 6. Record residual BA of trees where applicable. Record any mark-to-girdle trees separately. Do not count mark-to-girdle trees toward the specified residual BA target.
- 7. Unless otherwise agreed to by the contract administrator and the contractor, plot center will be marked by a stake or stick firmly inserted in the ground (not snow) with a ribbon attached to it at a height of not less than two feet above the ground, and labeled with the PU/stand number and plot number. In addition, ribbon at least 12 inches long must be attached to the tree closest to plot center.
- 8. All cruise sheets must be labeled with the compartment #, stand #, unit #, prism factor, date, individual tree species, and the cruiser's name.
- 9. The Grayling Management Unit Office will provide cruise sheets.
- A copy of the "POSALE" program will be provided to the successful bidder for cruise data entry. Original cruise sheets and a disk containing cruise data exported from POSALE must be delivered upon the completion of the sale. Note: At the cruise data entry screen in POSALE, when prompted to enter the stand acres, enter your actual GPS file acres – NOT the contract's estimated inventory-based acreage.
