Unless otherwise specified, the tally sheets used must be those provided by the Forest, Mineral and Fire Management Unit.								

ROSCOMMON MANAGEMENT UNIT MARKING BOUNDARIES AND AREA

- 1. The attached type map delineates the contract marking area.
- 2. Marking must be done in dry weather and when tree surfaces are not wet.
- 3. Paint the boundary line in such a way that it can be seen both from the inside of the sale area and when walking along the line from either direction (two sides).
- 4. The Roscommon Management Unit does not contract the marking of private lines on any of our timber sales. Management Unit personnel will mark private lines with blue paint and the contractor will mark remaining stand(s) with red paint so as to obtain complete closure of all stands designated for cutting.
- If sale is to be divided into cutting units, line location will be as shown on attached map of sale.
 Cutting lines will be marked with yellow paint on four sides of trees.
- 6. Place Marks approximately six feet above the base of the tree.
- 7. The contractor will keep track of total quarts of paint used per-sale by color.
- 8. Contractor must use GPS to determine acreage.
- Position Mode must be set so that GPS receiver collects data from a minimum of four satellites and 3D.
- 10. GPS receiver must log PDOP, SNR, number of satellites, and mode of collection (Manual/GPS).
- 11. PDOP mask must not exceed 7. This can be modified if approved by the Unit Manager.
- 12. GPS data must be differentially correct and provided in either ESRI .SHP or Trimble .COR format. Files will contain PDOP(HDOP at the discretion of the Unit Manager), SNR, number of satellites, and mode of collection (Manual/GPS) for each point collected. In addition, supply a disk of traverse file along with hard copy of the corrected traverse file.

ROSCOMMON MANAGEMENT UNIT TIMBER CRUISING SPECIFICATIONS

- 1. Cruise at a rate specified in the Timber Sale Preparation Prescription.
- 2. Use a 10-factor prism for all plots. Plots shall be evenly distributed throughout sale area.
- Use the product standards to determine products and heights of products. See appendix D of product summary in the "The Compleat Marker: A Guide to Managing Northern Hardwoods on Michigan State Forests".
- 4. Mark location of plots on the map, using the plot number.
- 5. Unless otherwise agreed to by the contract administrator and the contractor, plot center will be marked by a stake or stick firmly inserted in the ground (not snow) with ribbon attached to it at a height of not less than two feet above the ground, and labeled with the plot number. In addition, ribbon at least 12 inches long must be attached to a tree closest to plot center.
- 6. All cruise sheets must have compartment number, stand number, unit number, prism factor, date, individual tree species, and the cruiser's name.
- 7. A copy of the POSALE program will be provided to the successful bidder for cruise data entry.
 Original cruise sheets and a disk containing the cruise data exported from POSALE must be delivered upon the completion of the sale. Note: At the cruise data entry screen in POSALE, when prompted to enter the stand acres, enter your actual GPS acres for that stand—NOT the contract's estimated inventory-based acreage.

Appendix C

ROSCOMMON MANAGEMENT UNIT LEAVE TREE MARKING SPECIFICATIONS

- 1. Leave Trees must be marked at breast height and also stump marked with green paint.
- 2. Paint on leave trees must be able to be seen from all sides of the tree.
- 3. Den trees and good mast trees, if found, must be marked to leave for wildlife.
