

TIMBER SALE PRESCRIPTION

GENERAL

Date 08/01/2011	Forest, Mineral and Fire Management Unit Naubinway
Timber Sale Number (if applicable) 45-101-11-01	Sale Name (or prescription name) Gravy Pine AKA Red Pine Measurement Block Test C

LOCAL CONTACT

Name Don Kuhr	Telephone (906) 341-2518
Email Address kuhrd@michigan.gov	FAX () -

Map of Project Area Attached

LEGAL DESCRIPTION

T42N R6W Section(s) 1 Description

Year of Entry: 2011 Compartment(s):103 Stand Number(s): 27

THIS TIMBER SALE CONTRACT IS BASED ON THE FOLLOWING ACREAGE

Estimated Acres: 40 Source: OI GPS Other _____

Payment will be made on the basis of these estimated acres.

TREATMENT & OBJECTIVE

STAND #	COVER TYPE	ACRES	BA	TREATMENT	MANAGEMENT OBJECTIVE
27	R9	40	130	Final Harvest	Red Pine

PRESCRIPTION

1. The cover is RP.
- 2.
3. All the RP are designated for harvest. In addition, there are a few white pine, white spruce and paper birch.
- 4.
- 5.
- 6.
- 7.
- 8.
- 9.

Access Town Line Rd.

Special Instructions:

TIMBER CRUISING SPECIFICATIONS

This is included in the bid This is not included in the bid

Required Basal Area Factor: 10 20 Other:

Cruise Line Directions The plots have already been established. The plot locations and numbering is shown on page 5.

CRUISING UNITS	NUMBER OF PLOTS PER ACRE	SPACING (CHAINS)
West Forty	1	N/A X N/A
		X
		X
TOTAL NUMBER OF CRUISE POINTS	40	

Cruise Special Instructions:

Temporary plots have been established. Plot center is a wooden stake sticking out at least 4" above the ground, flagged, painted, numbered and easy to see. Additional flagging has been placed overhead so the plot may be easily located. All trees, whether 'cut' or 'leave', which are 'in' using a Limiting Distance Table with a Basal Area Factor of 10 have been marked. Marking consists of a horizontal line (about 6") at dbh and a tree number anywhere on the tree, but clearly visible from plot center. Tree numbers start at 1 for each plot.

Azimuth and distance to the center of the tree at the base from the plot center have been recorded along with species. This information will be provided to you by the DNR in an Excel format. When trees are near the edge of the stand, the 'walkthrough' method (Ducey et al 2004) was used to determine 'in' trees. Trees 'in' from the 'walkthrough' method have been counted twice, have two numbers painted on the tree and are listed twice on the Excel spreadsheet.

Using the tree data in the spreadsheet, cruise each tree on the plot according to the following procedure. An example of the data and tally card is shown on page 6. The entire spreadsheet will be emailed to the winning bidder.

DBH: Measure Diameter at Breast Height (DBH) in the location marked on each tree. Round down to the nearest 10th. Use a d-tape or the average of a caliper where two measurements are taken at 90°.

H_S(1'): Measure height for the sawtimber portion of the tree in feet to a 9" Diameter Outside Bark (DOB) or to the sawlog stopper (see Product Standards and Cruising Manual). Round down to the nearest 1'. Minimum DBH is 9.1". If a tree has no sawtimber portion record H_S as 0 (do not leave blank). This may occur on a tree with no 8' minimum log (9.1" tree with a fork at 6') or has no quality (9.1" tree with branches all the way to the ground). Use a Wheeler Pentaprism®, Laser Ace®, Gator Eyes® or similar device to determine the 9" location on the stem and a clinometer, Relaskop, Laser Ace® or similar device to determine H_S.

L_{DS}: Length of deduct in the sawtimber portion of the tree recorded to the nearest 1'. This is the length of defect between a 1' stump and H_S1'. This may be in one section or multiple sections, but is recorded as one number. If in multiple sections, add the sections together and record one number. The minimum length for a sawlog is 8'. There is no maximum length. See Product Standards and Cruising Manual for information on deduct

L_{DSR}: Length of deduct in the sawtimber portion of the tree that is recoverable for pulpwood recorded to the nearest 1'. The minimum length for recoverable pulpwood is 8'. There is no maximum length. For example, if there is a (H_S =)30' sawlog section in a tree with a 10' long section in the middle of it that is defective (L_{DS} = 10'), 9' of which could be a pulp log, then L_{DSR} = 9'.

H₄(1'): Measure height of the tree in feet to a 4" Diameter Outside Bark (DOB). Round down to the nearest 1'. This can be, but is not necessarily the merchantable height. Record height to a 4" DOB regardless of the location of the pulpwood stopper (denoted as H_P). Use a Wheeler Pentaprism®, Laser Ace®, Gator Eyes® or similar device to determine the 4" location on the stem and use a clinometer, Relaskop, Laser Ace® or similar device to determine H₄. If there is a pulpwood stopper (See Product Standards and Cruising Manual), also record the height to the location of the pulpwood stopper, H_P(1') to the nearest 1'; use a clinometer, Relaskop, Laser Ace® or similar device to determine H₄.

L_{D4}: Length of deduct in the pulpwood portion of the tree recorded to the nearest 1'. This is the length of defect between the H_S and H₄(or H_P, if H₄ ≠ H_P). This may be in one section or multiple sections, but is recorded as one number. If in multiple sections, add the sections together and record one number. The minimum length for pulpwood is 8'. There is no maximum length. See Product Standards and Cruising Manual for information on deduct.

Every 4th tree on each plot has been painted with a different colored number, e.g. tree #4, tree #8, etc. These are the sub-sample trees. The sub-sample trees will require 3 additional measurements: DFH, H1' and H_C1'.

DFH is the diameter at form-class height (17.3') measured to the nearest 0.1" using a Wheeler Pentaprism®, Laser Ace®, Gator Eyes® or similar device. The location, i.e. 17.3', would be determined using a clinometer, Relaskop, Laser Ace® or similar device. If the H₄1' height is less than 17.3', then record zero.

H1' is the total height of a tree measured to the nearest 1' using a clinometer, Relaskop, Laser Ace® or similar device.

H_c1' is the height at the base of the (merchantable) crown (where the base of the first merchantable branch occurs) to the nearest 1' using a clinometer, Relaskop, Laser Ace® or similar device. If there is no merchantable branch, then record zero. A fork is considered a merchantable branch. The main stem would be considered the stem with the most value.

In addition to the tree measurements, you must track your time conducting this test. If you are using a portable data recorder, this could be used for time tracking. Time starts when you leave your truck to begin measurement and ends when you return to your truck. If you take breaks or lunch in the woods, then stop your time at the beginning of each break and start when you resume work. This is an important attribute of our test so it is important that you remember to start and stop your time appropriately.

Tally sheets will be provided by the DNR. Output from an electronic data recorder is acceptable.

TIMBER MARKING SPECIFICATIONS

- This is included in the bid This is not included in the bid
- Precise specifications to be delineated at pre-work meeting with DNR staff

Total Merchantable Residual BA (Basal Area): ____ (Minimum ____ to Maximum ____)

SPECIAL MARKING INSTRUCTIONS

Unless otherwise specified, the tally sheets used must be those provided by the Forest Management Unit.

RESTRICTIONS

1. Forest Management Division must be able to identify who did what on the timber sale.
2. This work is to be performed by one person.

PAINT

1. None needed.

DELIVERABLES

1. The name of the person that did the cruising.
2. Tally from each plot in the Excel spreadsheet provided by the DNR.
