

# Compartment Review Presentation

## Grayling Forest Management Unit

Compartment 72070

Entry Year 2026

Acreage: 2,135

County Iosco

Management Area: High Sand Plains

---

**Stand Examiner:** Garret Price

### Legal Description:

T 23N R 08E Section 2 and T 24N R 08E Sections 11, 14, 23, 26, & 35

### Identified Planning Goals:

To maintain species and structural diversity while managing for health, productivity, and sustainability throughout the compartment. To provide multiple use opportunities and incorporate any visual management needed to optimize these uses.

### Soil and topography:

Soils consist of Grayling/Graycolm sand in the uplands and Colonville fine sandy loam in the flood plain of the AuSable River. The terrain is level except where influenced by the AuSable River, Coppler Creek, and 7 Mile Swamp. The terrain in these areas is quite hilly.

### Ownership Patterns, Development, and Land Use in and Around the Compartment:

This compartment consists of solid state ownership bisected by the AuSable River and Coppler Creek. The compartment is located directly west of 7 Mile Swamp, a special management area (compartment 73). Foote Dam, on the AuSable River, is located just to the west of the compartment. Foote Dam is owned and operated by Consumers Energy Company.

### Unique Natural Features:

Eastern Massasauga Rattlesnake (*Sistrurus catenatus*), Secretive Locust (*Appalachia arcana*)

### Archeological, Historical, and Cultural Features:

There are known concerns within the compartment. All proposed management activities have taken these concerns into consideration. Archaeology comments from previous year of entry indicate sites or potential sites adjacent to the AuSable River.

### Special Management Designations or Considerations:

This stand is adjacent to the 7 Mile Swamp management area.

### Watershed and Fisheries Considerations:

The AuSable River, a designated natural river, and Coppler Creek are in the compartment. Foote Dam is just to the west of the compartment.

### Wildlife Habitat Considerations:

This compartment contains a large amount of swamp edge habitat and transitions from upland to lowland. This transition habitat is highly valuable to wildlife species.

### Mineral Resource and Development Concerns and/or Restrictions

No known potential exists for commercial metallic mineral production in this part of the state. The closest known active sand/gravel pit is approximately three miles north. Potential for sand & gravel development within the compartment appears to be limited. There might be potential for some small borrow pits for internal department use. Some sparse Antrim Shale gas wells have been drilled in the region, including one just west of the compartment, but the compartment is well outside the main Antrim play, and the wells in the area had scant production, if any. The Antrim play is generally in decline, no new Antrim wells are being drilled, and there has been an increasing trend toward plugging. At current gas prices, drilling of new Antrim wells is not economical. No recent well permits have been issued in the area, and there is no current leasing activity involving State-owned mineral rights. Potential for hydrocarbons from known producing formations beneath the compartment is considered low at this time. The State does not own all the mineral rights within the compartment. Because the mineral estate is the dominant estate, the surface owner must provide the owner of the mineral rights reasonable access to the surface for mineral exploration and development.

### Vehicle Access:

County roads located in the compartment are Rea Road, River Road, and Bissonette Road. The remainder of the compartment has difficult access due to rough overgrown trails and sandy, hilly terrain.

**Survey Needs:**

If stand 56 is treated; The SW of stand 56 needs to have the corner placed for the SW corner of the SE1/4 of SE1/4 of Section 26. There is a potential trespass, and a recent timber sale to the west on private.

**Recreational Facilities and Opportunities:**

The compartment contains the Old State House trail head/parking lot along with portion of designated snowmobile trail #96, the Old State House ORV Trail and ORV Route. "Highbanks", a parking lot and scenic overlook, provides fishing access from River Road to the south side of the Ausable River. The compartment also contains a Parks and Recreation Bureau managed access site on the AuSable, located on leased Consumers Energy land located in Section 26. The dock for the River Queen paddle boat is located on River Road just west of the compartment.

**Fire Protection:**

Access between Bissonette Road to the south and Indian Road to the north is difficult. The trails are rough, narrow, and sandy. The powerline has numerous areas with loose sand and terrain that makes access with fire apparatus difficult. The east side of the compartment next to compartment 73 (7 Mile Swamp) is hilly with steep slopes down to the swamp.

**Additional Compartment Information:**

Bissonette road between Section 23 and 26 (Stand 51) is not on the section line for approximately 3/4 mile. The private property south of Bissonette road is crossing the State land between their property and Bissonette Road with driveways for access to residences. Formal requests have been levied to purchase easements across the State land to gain legal ingress-egress. This parcel was recommended for disposal for 2 consecutive YOEs. No action has been taken up to this time. The best course of action would be to dispose of the State land south of Bissonette Road at public auction. Due to; proximity of homes, illegal expansion of yards, and the multiple driveways, and residences here, commercial timber harvest will be challenging for operability and PR.

**The following reports from the Inventory are attached:**

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

**The following information is displayed, where pertinent, on the attached compartment maps:**

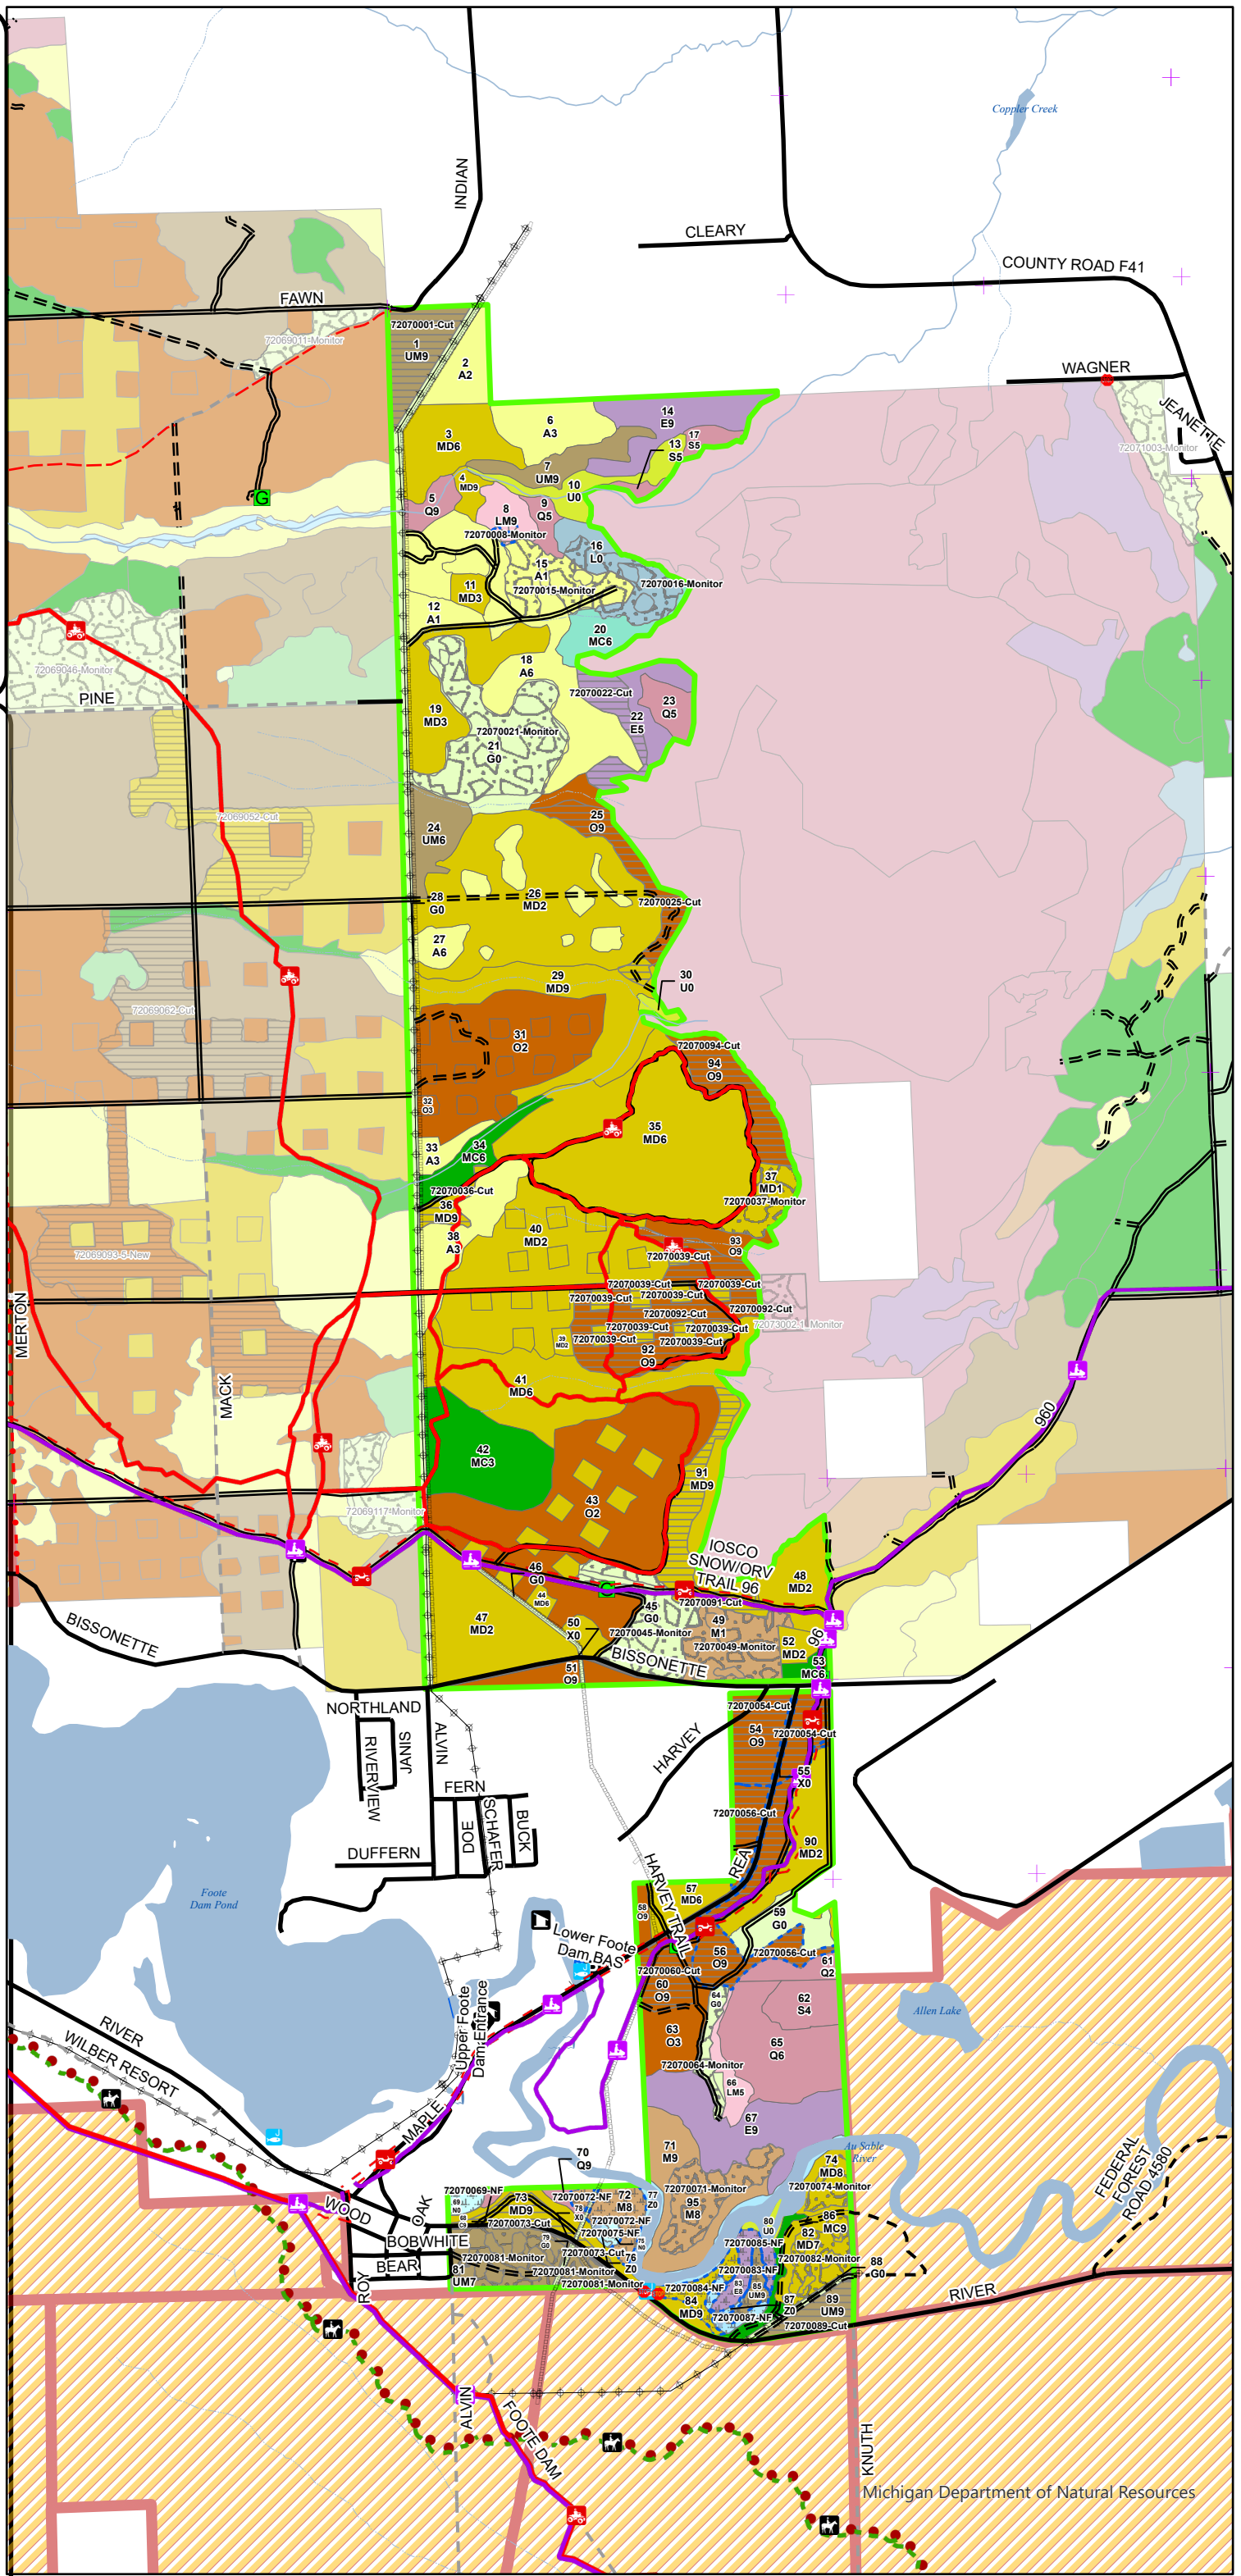

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Treatment Name	Acres	Stand CoverType	Size Density	Stand Age	BA Range	Treatment Type	Treatment Method	Cover Type Objective	Age Structure	Habitat Cut
----------------	-------	-----------------	--------------	-----------	----------	----------------	------------------	----------------------	---------------	-------------

<b>89</b>	<b>72070089-Cut</b>	10.2	4310 - Pine, Oak Mix	Sawtimber Well	106	81-110	Harvest	Clearcut with Retention	4199 - Other Mixed Upland Deciduous	Even-Aged	No
-----------	---------------------	------	----------------------	----------------	-----	--------	---------	-------------------------	-------------------------------------	-----------	----

Prescription Specs: CC 2 inch and up. mark to leave some red pine, white pine and white oak for visual off of River road and the County Bike Trail. Focus retention around denser pocket(s) of regen.

Next Step Treatments: Monitoring, Natural Regen (Re-Inventory)

Acceptable Regen: oak and pine are preferred but accept any upland mix

Other Comment: trail spec, grouse spec, powerline to west, soft oak wilt spec

Site Condition

Proposed Start Date: 10/1 /2025

<b>91</b>	<b>72070091-Cut</b>	25.1	4199 - Other Mixed Upland Deciduous	Sawtimber Well	106	81-110	Harvest	Clearcut with Retention	4199 - Other Mixed Upland Deciduous	Even-Aged	No
-----------	---------------------	------	-------------------------------------	----------------	-----	--------	---------	-------------------------	-------------------------------------	-----------	----

Prescription Specs: cc 2 inch and up, except do not cut log conifer. mark to leave 5 to 10 quality white oak for mast.  
Treatment boundary has been approximated due to steepness and the hill ends at the start of the swamp. Only code a portion of this as LTR. Code the rest of the site conditioned exclusions as Too Steep or Too Wet.

Next Step Treatments: Monitoring, Natural Regen (Re-Inventory)

Acceptable Regen: Accept a combination of mixed oak, red maple, aspen and red and white pine.

Other Comment: trail specs. Drumming log spec. hard oak wilt spec, EMR spec

Site Condition

Proposed Start Date: 10/1 /2025

<b>92</b>	<b>72070092-Cut</b>	56.4	4125 - Black, N. Pin Oak	Sawtimber Well	100	81-110	Harvest	Clearcut with Retention	412 - Oak Types	Even-Aged	No
-----------	---------------------	------	--------------------------	----------------	-----	--------	---------	-------------------------	-----------------	-----------	----

Prescription Specs: clear cut 2 inch and up except do not cut log red and white pine. Mark to leave scattered quality white oak for mast, (no more than 5 sqft).  
Blow down in the east may be better for retention than what was set up previously.

Next Step Treatments: Monitoring, Natural Regen (Re-Inventory)

Acceptable Regen: mixed oak with aspen is preferred. All conifer at any density is also acceptable.

Other Comment: apply soft oak wilt, trail and grouse specs. Add EMR spec

It was determined to include 5 spots in harvest at pre-review.

Note: Stand was previously set up last YOE and was turned back in. LTR may be better to place in stands east where extensive blowdown has occurred to buffer the swamp edge

Site Condition

Proposed Start Date: 10/1 /2025

### Report 5 – PROPOSED SPECIAL CONSERVATION AREA\* (SCA) DETAILS

\* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

**Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS**

\* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area  
 HCVA = High Conservation Value Area  
 SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Lake	A coldwater lake has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species to persist from year to year. Suitable conditions for coldwater fishes may occur in Michigan lakes if they are relatively deep, have substantial groundwater inflows, or are located in colder (northern) areas of the state. Such lakes are established by Director's action and designated as trout resources by Fisheries Order 200.
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments
-------	--------------------	--------------	-------	-----------	----------	--------------	------------------

<b>1</b>	4310 - Pine, Oak Mix	Sawtimber Well	21.6	91	111-140	N/A	Variable species composition and density throughout. pockets of denser aspen and mature to overmature red pine. JP is continuing to drop out. Low density seedlings of rp, wp, wo, hybrid-black-pin oak with each species locally high. Ground cover of full bracken fern, slightly rolling hills. 1 canopy dominant H/BO and 1 codminant RP cored. H/BO 97 RP 69. RP and oak show considerable senescence in growth the past 10+ years. Stands interior is primarily pockets of hybrid/pin oak, aspen and a higher density of (planted or interplanted?) red pine. Scattered super canopy X log pine throughout stand with fire scars, protect during set up.
----------	----------------------	----------------	------	----	---------	-----	--

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size
Bigtooth Aspen	15	Log	12		Red Oak	Low	Variable	Seeding
Red Pine	36	Log	13	71	White Pine	Low	Variable	Seeding
White Oak	2	Pole/Log	8		Huckleberry	Medium	< 5 feet	Tall Shrub
White Pine	2	Pole/Log	9		Hawthorn (spp.)	Trace	5 - 10 feet	Tall Shrub
Black/Red (Hybrid) Oak	40	Log	13	91	Red Pine	Low	Variable	Sapling
Jack Pine	5	Pole	8	64				

Old comments 2016 YOE:  
Natural pine stand with a mix of oak and aspen. Red pine is mostly single aged with scattered large diameter pine present. Red pine is also in the understory. Unsure if a new recruiting age class or suppressed individuals. Oak and aspen are perssisting, but the jack pine is beginning to die out.

<b>2</b>	4131 - Aspen, Oak	Sapling Medium	15.3	11	Immature	N/A	Patchy oak aspen, rm regen variable in composition and density. Understory wp, rp, jp at low to moderate throughout. passes regen check. Small open areas should continue to fill in. Handfulnof overstory X log RP and a couple WP.
----------	-------------------	----------------	------	----	----------	-----	--

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size

White Pine	1	XLog	18		Black/Red (Hybrid) Oak	High	5 - 10 feet	Sapling
White Pine	10	Sapling	1					

Old Comments 2016 YOE:  
N end is lower density w/ some tag alder seeding into conifers, wp, bf, and scattered rp.

<b>3</b>	4191 - Mixed Upland Deciduous with Conifer	Poletimber Well	28.5	46	81-110	N/A	Hold 10 west is still small pole aspen. Aspen diameter larger in east.
----------	--	-----------------	------	----	--------	-----	--

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size
Bigtooth Aspen	35	Pole	8	46	Red Oak	Medium	Variable	Sapling
Black/Red (Hybrid) Oak	35	Pole	7	46	Witch Hazel	High	5 - 10 feet	Tall Shrub
Red Maple	5	Pole	6		Red Maple	Low	Variable	Sapling
Red Pine	5	Log	12	71	White Pine	Low	Variable	Sapling
White Oak	5	Pole/Log	8					

Good mix of oak and aspen throughout. Residual pine from '78 harvest are producing seed and should help maintain a pine component to this stand. SW corner of this stand contains the ridge for and part of the Cobbler Creek flood plain. Aspen and red maple make up this area.

<b>4</b>	4199 - Other Mixed Upland Deciduous	Sawtimber Well	4.8	101	81-110	N/A	edge call. oak is doing ok up top. too steep to operate
----------	-------------------------------------	----------------	-----	-----	--------	-----	---

Canopy Species	% Cover	Size Class	DBH	Age	Sub-Canopy Species	Density	Avg. Height	Size
Red Oak	48	XLog/Log	20	101	White Pine	Medium	Variable	Sapling
Red Pine	2	XLog/Log	20		Red Oak	Low	Variable	Sapling
White Oak	5	Log/XLog	17		Red Maple	Low	Variable	Sapling
Bigtooth Aspen	30	Log	16	101	Balsam Fir	Medium	Variable	Sapling
Red Maple	15	Log	10					

Old Comments 2016 YOE:  
Old Comments: Nice clump of sawlog oak by trail road. Oak aspen plateau. White pine succeeding along with scattered oak in large enough gaps. Aspen is dying out of stand.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments
-------	--------------------	--------------	-------	-----------	----------	--------------	------------------

**5** 6128 - Lowland Coniferous, Mixed Deciduous Sawtimber Well 7.2 113 141-170 N/A edge call old comments confirm. too steep. aspen/oak declining

Canopy Species	% Cover	Size Class	DBH	Age
White Pine	25	XLog/Log	19	
Red Pine	10	XLog/Log	20	
Red Maple	5	Log	11	
Red Oak	20	Log	13	101
Northern White Cedar	25	Pole/Log	8	113

Sub-Canopy Species	Density	Avg. Height	Size
White Pine	Low	Variable	Sapling
Hemlock	Low	10 - 20 feet	Pole
Balsam Fir	Low	Variable	Sapling

Old Comments 2016 YOЕ:  
South 1/4 of stand is on the north facing aspect of the Cobbler Creek flood plain, the middle 1/2 is in the flood plain itself, and the north 1/4 is on the south aspect. Aspen, oak dominate the ridges while white pine and cedar are more common below. Red pine and maple are scattered throughout the stand. Paper birch is present but dying out of the stand. Few hemlock in the understory and canopy. Cobbler Creek runs through this stand.

**6** 4139 - Aspen, Mixed Deciduous Sapling Well 21.9 12 Immature N/A hybrid oak amd white pine filling in gaps. not much is competitive with as and rm

Canopy Species	% Cover	Size Class	DBH	Age
Red Maple	20	Sapling	2	12
White Oak	2	Log	14	
White Pine	15	Sapling	3	
Red Pine	1	XLog/Log	20

Bigtooth Aspen	59	Sapling	2	12

Sub-Canopy Species	Density	Avg. Height	Size
Black/Red (Hybrid) Oak	Medium	5 - 10 feet	Sapling
White Oak	Low	5 - 10 feet	Sapling
White Pine	Medium	5 - 10 feet	Sapling

old  
Scattered log size oak over a sapling aspen stand. Deer browse was not heavy.

**7** 4319 - Mixed Upland Forest Sawtimber Well 14.8 86 111-140 N/A

Canopy Species	% Cover	Size Class	DBH	Age
White Oak	5	XLog/Log	18	
Red Oak	20	Log/Pole	10	101
Quaking Aspen	5	Log/Pole	10	
Red Maple	15	Log/Pole	10	
White Pine	35	Log	14	86
Northern White Cedar	20	Log	13	110

Sub-Canopy Species	Density	Avg. Height	Size
Black Spruce	Low	Variable	Sapling
White Pine	Medium	Variable	Sapling
Witch Hazel	Medium	5 - 10 feet	Tall Shrub
Balsam Fir	Medium	Variable	Sapling
Red Maple	Medium	10 - 20 feet	Sapling
Alder	Low	5 - 10 feet	Tall Shrub

Only northern stand perimeter is operable due to waterbquality bmp concerns in drainage and vps in rest of stand. walked stand perimeter. did not see cedar pockets. alder and pools present throughout especially in west half. variable size/density due to naturally occurring gap dynamics in stand arguably 2 aged. hold unless acres needed. legacy oak and wp present. mostly rm and aspen in openings. some scattered oak and pboldPatches of solid cedar red maple with WP overstory. Coppler Creek adjacent. Overstory white pine varies in age due to gap phase dynamics. Recruitment is still occurring. Oak appears to be healthy for its age, suggesting decent site index values. Cedar pockets are 100 plus years.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments
-------	--------------------	--------------	-------	-----------	----------	--------------	------------------

<b>8</b>	6132 - Mixed Lowland Forest with Cedar	Sawtimber Well	9.9	103	141-170	N/A	standing water in depressions at edge where harvest stopped. edge call deteriorating portions of stand giving way to balsam spruce regen coming in in gaps. white pine on higher ground. birch has mostly dropped out and red maple is declining.																																													
<table border="1"> <thead> <tr> <th>Canopy Species</th> <th>% Cover</th> <th>Size Class</th> <th>DBH</th> <th>Age</th> </tr> </thead> <tbody> <tr> <td>Northern White Cedar</td> <td>25</td> <td>Log</td> <td>11</td> <td></td> </tr> <tr> <td>Paper Birch</td> <td>20</td> <td>Log</td> <td>11</td> <td></td> </tr> <tr> <td>Balsam Fir</td> <td>15</td> <td>Pole</td> <td>8</td> <td></td> </tr> <tr> <td>Red Maple</td> <td>35</td> <td>Log</td> <td>12</td> <td>103</td> </tr> <tr> <td>White Pine</td> <td>5</td> <td>XLog</td> <td>23</td> <td></td> </tr> </tbody> </table>		Canopy Species	% Cover	Size Class	DBH	Age	Northern White Cedar	25	Log	11		Paper Birch	20	Log	11		Balsam Fir	15	Pole	8		Red Maple	35	Log	12	103	White Pine	5	XLog	23		<table border="1"> <thead> <tr> <th>Sub-Canopy Species</th> <th>Density</th> <th>Avg. Balsam Fir	Medium	Variable	Sapling																																																	

<b>9</b>	6123 - Lowland Fir	Poletimber Medium	5.3	76	51-80	N/A	edge call. old comments confirmed old Originally part of stand 8. This stand is a good example of lowland type disturbance. Significant blow down has occurred within this stand over the past 10 - 15 years. More than likely due to a slightly higher water table. Reminant paper birch and red maple still persist but most are now large coarse woody debris. The understory balsamm fir now occupies the canopy along with red maple and some white pine that was present. New growth of balsam and red maple are now present in the understory.

-------	--------------------	--------------	-------	-----------	----------	--------------	------------------

<b>12</b>	4139 - Aspen, Mixed Deciduous	Sapling Poor	12.8	5	Immature	N/A	Stand inadvertently deleted during update. Stand info restored from archive data. Stand passed monitoring treatment reinventory. Canopy should fill in by next YOE.  multipart Stand has Aspen clones dominating where present currently. The remaining portion of the stands is filling into Black and pin oak. Additional time will be needed to count the majority of the oak saplings toward canopy cover. Add a monitoring treatment for next year of Entry To ensure proper regeneration. Once oak recruits I expect the stand to be fully stocked. Red and white Pine left during previous Harvest vary widely in age. Residual white Average roughly 40 years old. The majority of Pine regeneration Seating in from previous Harvest is located Along the perimeter of the stand.  Harvested under contract 72-014-17 Comp 70 Lowland Oak Mix. Good regeneration throughout composed of Aspen, Oak and Red Maple. Left all red and white pine. Parent stand was 101 years old.  Old Comment: Delayed treatment for age/size class diversity. Natural pine sub-canopy is recruiting into the canopy. White pine is occupying canopy gaps more efficiently than red pine which is mostly suppressed. Canopy oak and jack pine growth have stagnated, high rings per inch. Jack pine is experiencing the most mortality. Aspen did well on this site. Scattered large diameter red pine throughout the stand.

Old Comments 2016 YOE:  
Part of old stand 22. Red pine is slightly older than jack pine. Appears they were released from previous harvest. Red pine is putting on good diameter growth. Jack pine is more bushy to the east with many broken tops. Form improves to the west but growth is slow. Oak overtopping in many areas. Jack pine is of natural origin. The parent stand was a J5.

<b>35</b>	4199 - Other Mixed Upland Deciduous	Poletimber Well	124.1	33	51-80	N/A	Oak present in canopy gaps and filling in Stand primarily Oak Northern pin and hybrid With occasional Aspen Clones Scattered throughout White Pine jackpine And red pine present in the understory in Trace Amounts Widely scattered but present Red Pine white pine and Jack Pine In the canopyOak is growing in clumps with 1 - 2 dominant stems obvious. Aspen is in pockets with the largest being in the east. Oak is still present within aspen pockets. White pine appears to be older. Release from previous harvest. Contains ORV trail.

<b>40</b>	4199 - Other Mixed Upland Deciduous	Sapling Medium	72.9	5	Immature	N/A	Regeneration is better in the west than the East Mix of Aspen clones, oak and scattered conifer primarily Jack. Oak should continue to recruit.  Old Comments 2016 YOE: Comp 70 Oak Final Harvest 72-015-17. Cut in Fall of 2019. This stand was originally the same stand as 92 but because the sale was not completed, this stand is the harvested portion of the sale. The density of stems is variable with portions to the west less stocked, and moving east stocking increases significantly. Could be either MD1 or U-type. Oak and aspen seem to be establishing well. Scattered pole sized pine left.  OLD NOTES: Stand made up of pure oak and aspen pockets with jack pine scattered throughout. The jack pine has been dying out for awhile. Remaining individuals look unhealthy. Aspen is holding strong but is more than likely hollow. Understory oak are growing in pockets, mostly under aspen. White pine is recruiting into the canopy.

old comments 2016 yoe  
Stand cut in Timber sale 72-020-18 by T.R. Timber. Sale closed on 5/25/2019.

Illegal driveways located west of Rea Rd. and to the south. Oak is mostly growing in clumps. Pockets of jack pine and aspen throughout this stand. 08/2018 Update: Part of stand 56 will be treated by variance: Final harvest all species, retention is in part of stand 56 that is not being treated. Purpose of treatment is to clear navigable airspace for runway approach, as required by Federal Aviation Regulation.

<b>91</b>	4199 - Other Mixed Upland Deciduous	Sawtimber Well	52.0	106	81-110	N/A	cc this stand. leave xlog wp and rp. Mark to leave 5 to 10 decent wo for mast. exclude wet areas in south and slopes. expect regen heavier to rm in areas due to absent aspen in areas. walk n half and exclude topography from tx. East West finger has an intermittent drainage present and is too steep to cut. This area has some higher quality Aspen and Oak than Adjacent stands.

Areas with some heavier slash loading from recent harvest. minimal regeneration observed during site visit. monitoring treatment closed out with new monitoring reinventory added due to recent harvest and no recruited regeneration at this time. Update Lovelace: Stand harvested under contract 72-009-17 Comp 70 South Mix. All Specs were met. Areas of heavy slash. Minimal to no rutting. Roundwood operation. Cut Fall/Winter 22-23. old comments. Northern hardwood stand with a southern floodplain component in lower areas. A forested drain runs through the north portion of this stand. Beech and oak become more prevalent towards the river with red maple and birch increasing to the north. Sugar maple is mostly even aged but older individuals are scattered throughout the stand. A younger age class is in the sub-canopy. Hemlock appears to be healthy. White ash has mostly died out of this stand. Expect large coarse woody debris in a few years which may promote yellow birch and hemlock as well as a unevenaged structure.
