

Compartment Review Presentation

Newberry Forest Management Unit

Compartment 42131

Entry Year 2023

Acreage: 3,502

County Luce

Management Area: Tahquamenon Basin Wetlands

Revision Date: 2021-12-29

Stand Examiner: Matt Payment

Legal Description:

T45N R8W, Sections 4, 5, 8, 9, 16, 17, 20, 21, 28, and 29

Identified Planning Goals:

Sage River Deer Wintering Complex.

Soil and topography:

Mainly level lowland with some subtle ridges.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

Compartment is primarily made up of a continuous block of state ownership with one private inholding. The compartment is primarily surrounded by state land.

Unique Natural Features:

MNFI lists the potential for goshawk, merlin, eagle, osprey, and great blue heron rookery, wood turtle in East Branch Sage River, Blanding's turtle, yellow rail, American bittern, least bittern, marsh wren, and common moorhen. Calypso, round-leaved orchid, ram's head lady's slipper, and limestone oak fern in cedar swamps, marsh plants including sweet coltsfoot, Wiegand's sedge, northern prostrate clubmoss, fir clubmoss, English sundew, black crowberry, American shoregrass, moor rush, panicked screw-stem, Hill's pondweed, alga pondweed, alternate-leaved water-milfoil, and autumnal water starwort, and satiny willow along streams.

Archeological, Historical, and Cultural Features:

None Known

Special Management Designations or Considerations:

Deer Wintering Complex

Watershed and Fisheries Considerations:

This compartment is skirted by the East Branch Sage River to the west. East Branch Sage River is not a designated trout stream, but is a cold stream supporting a mixture of coolwater species and coldwater species. Any treatments near the riparian zones for these waterbodies should buffer 100 ft plus 5 ft per 1% increase in slope. In stands along the East Branch Sage River where Aspen is a major component, a 300 ft buffer should be implemented to discourage beaver activity.

Wildlife Habitat Considerations:

Compartment 131 lies in southeastern Luce county in the Seney Sand Lake Plain ecological sub-subsection and is in the Tahquamenon Basin Wetlands Management Area with white-tailed deer, black bear, snowshoe hare and gray jay as featured species. The compartment lies within the Sage River Deer yard which supports high numbers of deer during stressful winter periods. The Sage river borders the compartment on the west side along its entire length and is an important wildlife travel corridor. The compartment is dominated by lowland coniferous types.

No harvests are scheduled this year of entry, thereby meeting wildlife objectives by retaining all cover stands for wintering deer and other wildlife. Scattered birch, aspen and spruce will continue to serve as future den and nest trees for marten (featured species) and flying squirrels and cavity nesting species such as woodpeckers, flycatchers, chickadees and saw-whet owls. Retained spruce will continue act as seed sources for birds and mammals and resting trees for fisher and marten as well as structural diversity for many species including deer and bobcat.

Mineral Resource and Development Concerns and/or Restrictions

Sections 4-5, 8-9, 16-17, 20-21, & 28-29, T45N-R8W, Luce County

No known potential exists for commercial oil & gas production in this part of the state, and there is no known potential for metallic minerals in this area. The nearest active sand/gravel pit is just over four miles to the east. Due to wetlands,

potential for sand & gravel development within the compartment appears limited. No current mineral leasing activity exists in the area. The State does not own all mineral rights within the compartment. Because the mineral estate is the dominant estate, reasonable access to the surface must be provided to private owners if they choose to explore or develop their mineral rights.

Vehicle Access:

Vehicle access into compartment is limited to M-28 in the north and the Sage River Truck Trail to the south of the compartment. There are a mix of old ice roads that run through the compartment that are growing in that are presently impassable or passable by ATV only.

Survey Needs:

None at this time.

Recreational Facilities and Opportunities:

Recreational opportunities are primarily fishing and hunting.

Fire Protection:

The potential for large fire growth in this compartment is low because of the lowland of conifer and hardwood cover types. Much of the compartment is inaccessible with heavy equipment. Most fires should be low intensity surface fires with slow rates of spread and may require modified suppression tactics.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

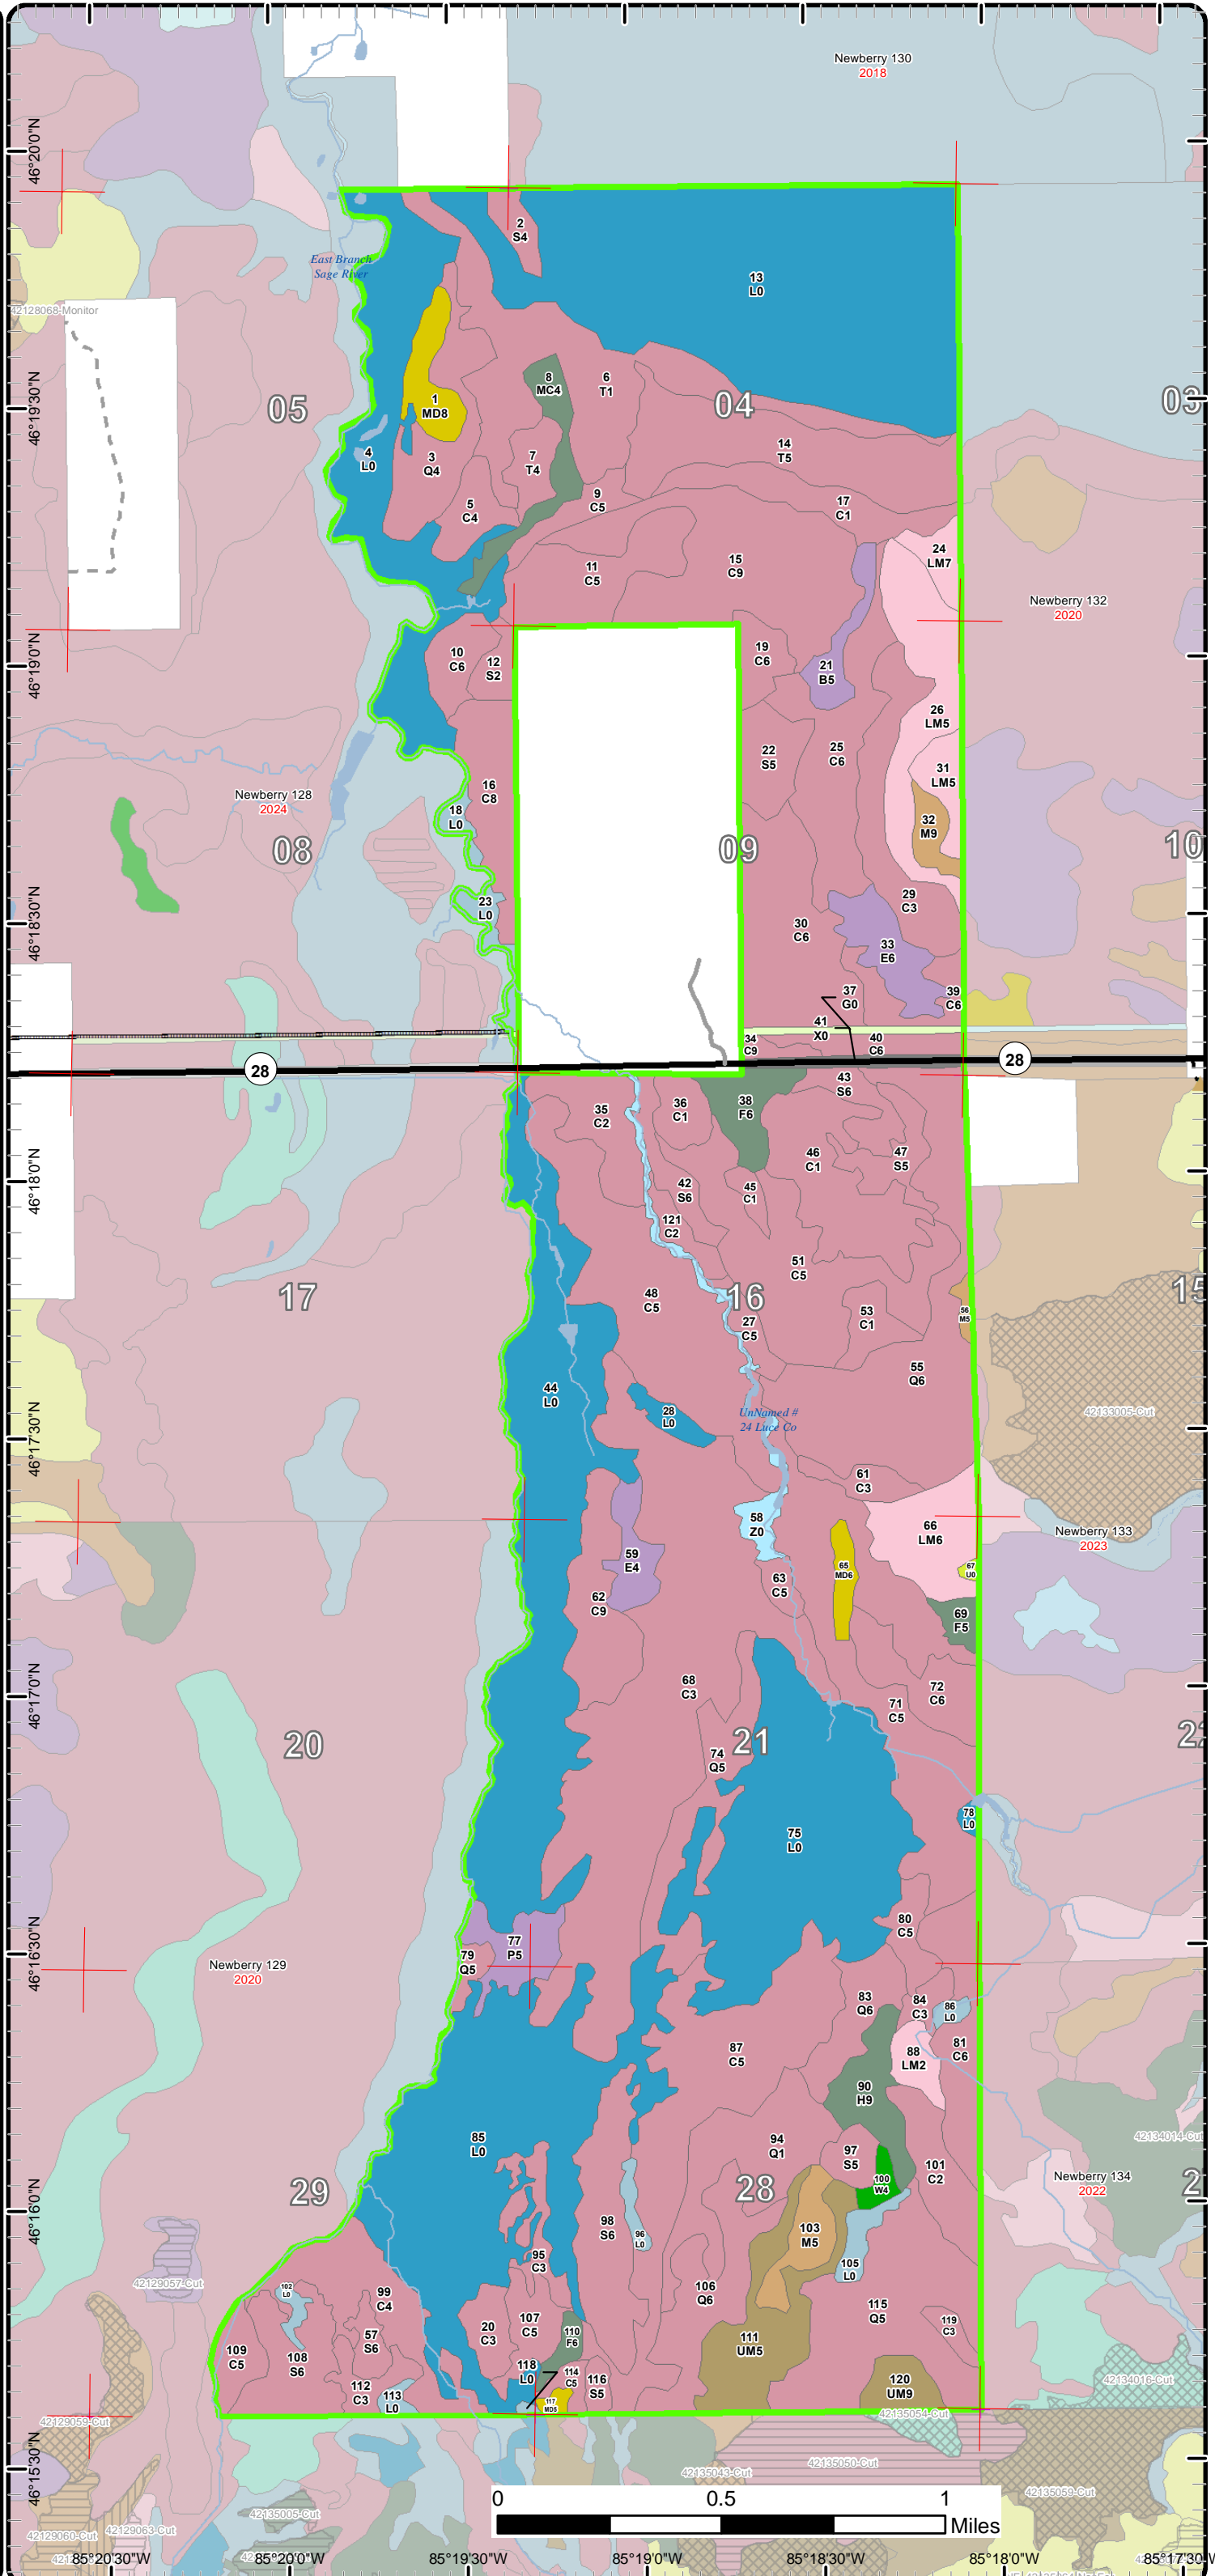

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Site No.	Dominant Site Availability	Dominant Site Condition	Acres	Other Site Condition	Other Site Condition	Other Site Condition	Other Site Condition
1	Available	4A: No Markets Available for these Forest Products	17	Unspecified	Unspecified	Unspecified	Unspecified
Comments:							
This stand was part of TSale# 420071301 - Sinking Snowshoes. This sale was offered on two separate bid offerings and went no bid both times. It was also solicited to several loggers who subsequently looked at it over a several month period. Most loggers were not interested in the amount of road work involved and the lowland nature of the soil types. Also some loggers mentioned not having decent market for the cedar that was on this sale. The proposed treatment was subsequently cancelled.

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

**Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS**

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
 HCVA = High Conservation Value Area
 SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Lake	A coldwater lake has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species to persist from year to year. Suitable conditions for coldwater fishes may occur in Michigan lakes if they are relatively deep, have substantial groundwater inflows, or are located in colder (northern) areas of the state. Such lakes are established by Director's action and designated as trout resources by Fisheries Order 200.
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.
SCA	Habitat Area	An area that provide some specific need for the life cycle of wildlife species, including State Wildlife Areas and Waterfowl Production Areas, deer wintering complexes in lowland conifer communities, grassland openings and savannas. Habitat areas are distinct from critical habitat designated for recovery of endangered or threatened species (such as Kirtland's warbler or piping plover areas) in that they are more general in nature, are not primarily associated with threatened or endangered species, and are not covered by species recovery plans that are developed in cooperation with Federal agencies.
SCA	Riparian Area	A transitional area between aquatic and terrestrial ecosystems in which the terrestrial ecosystem influences the aquatic ecosystem and vice-versa. Because of the unique conditions adjacent to lakes, streams and open water wetlands, riparian areas harbor a high diversity of plants and wildlife. Riparian communities are ecologically and socially significant in their effects on water quality and quantity, as well as aesthetics, habitat, bank stability, timber production, and their contribution to overall biodiversity.
