

Compartment Review Presentation

Sault Ste. Marie Forest Management Unit

Compartment 45053

Entry Year 2023

Acreage: 3,076

County Chippewa

Management Area: Munuscong Bay

Stand Examiner: Josh Brinks

Legal Description:

T44N- R1E Sections 3, 4, 5, 6, 7, 8, 9, 17 Pickford Township

Identified Planning Goals:

This entire compartment falls within the deer yard and past management has centered on deer. Old cedar strip cuts within the central part of the compartment do show some promise of regenerating cedar however it is a slow process. In surveying the strips it was determined to hold off on cedar strip cuts for this year of entry to let the present regeneration become more established.

Soil and topography:

Markey and Carbondale mucks make up the majority of the compartment, followed by Ermatinger silt loam and Soo silty clay loam. The first two soils are hydric and the last is wet and subject to ponding. Little relief is evident in this very flat compartment. The timber is noticeably better on slight rises that do exist.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

State of Michigan land borders the north with private holdings completely surrounding the rest. These private lands are generally used for agriculture or dispersed recreation. Private homes dot all of the county roads around the compartment. Legal access into this compartment exists off of 18 Mile Road off of M-129, however deep ravines keep this to foot access only. Three other access points exist, 19 and 20 Mile Road off of M-129 and 20 Mile Road off of Riverside Drive have all provided public access to this compartment but neither the State of Michigan nor the county has anything on paper.

Unique Natural Features:

A unique aspect of this compartment would be the vast amount of lowland forest type and the large amount of acreage with very little human impact.

Archeological, Historical, and Cultural Features:

None known at this time but DNR and contract workers are instructed to be on the lookout for anything that is obviously man-made or looks out of the ordinary.

Special Management Designations or Considerations:

None at this time.

Watershed and Fisheries Considerations:

This compartment contains a portion of the Little Munuscong River, which is a warm transitional stream, and Desormeaux Creek, a warm stream. This compartment is primarily swamp. No treatments are scheduled near these waterbodies, so Fisheries has no concerns at this time.

Wildlife Habitat Considerations:

This compartment is part of the Munuscong Bay Management Area where featured wildlife species include American bittern, American woodcock, mallard, sharp-tailed grouse, and white-tailed deer. Presettlement vegetation consisted of lowland conifer swamp, similar to the current cover. Cedar is a major component in the compartment, covering over half of the area, and provides important wintering cover for white-tailed deer in this deer wintering complex. Several tributaries of the Munuscong River run through the compartment. Historical treatments took place within cedar and swamp conifer stands, with variable regeneration taking place.

Wildlife objectives include maintaining the cedar and other closed canopy cover for wintering deer and other wildlife, and protecting stream and riparian habitats which is expected to benefit bitterns and some waterfowl, beaver, and other species. As a result of these and other considerations, no treatments are currently planned.

Mineral Resource and Development Concerns and/or Restrictions

No known potential exists for commercial oil & gas production in this part of the state, and there is no known metallic

mineral potential in this area. The nearest active sand/gravel pit is less than one mile to the west, but potential for sand & gravel within the compartment appears to be limited. No other known mineral potential exists in this area.

Vehicle Access:

There is no vehicle access into this compartment.

Survey Needs:

None needed.

Recreational Facilities and Opportunities:

Fishing is very limited or non-existent within this compartment. Hunting for hares and bobcats takes place in the winter months, and in years with early snows the compartment receives increased hunting pressure during the muzzleloading and late archery deer seasons. By directors order there is no motorized use allowed within the compartment on 20 Mile Road, 19 Mile Road, or the trail between 19 and 20 Mile roads (off of M-129).

Fire Protection:

Fire protection in this compartment would be very difficult given the lack of access and wet soils.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

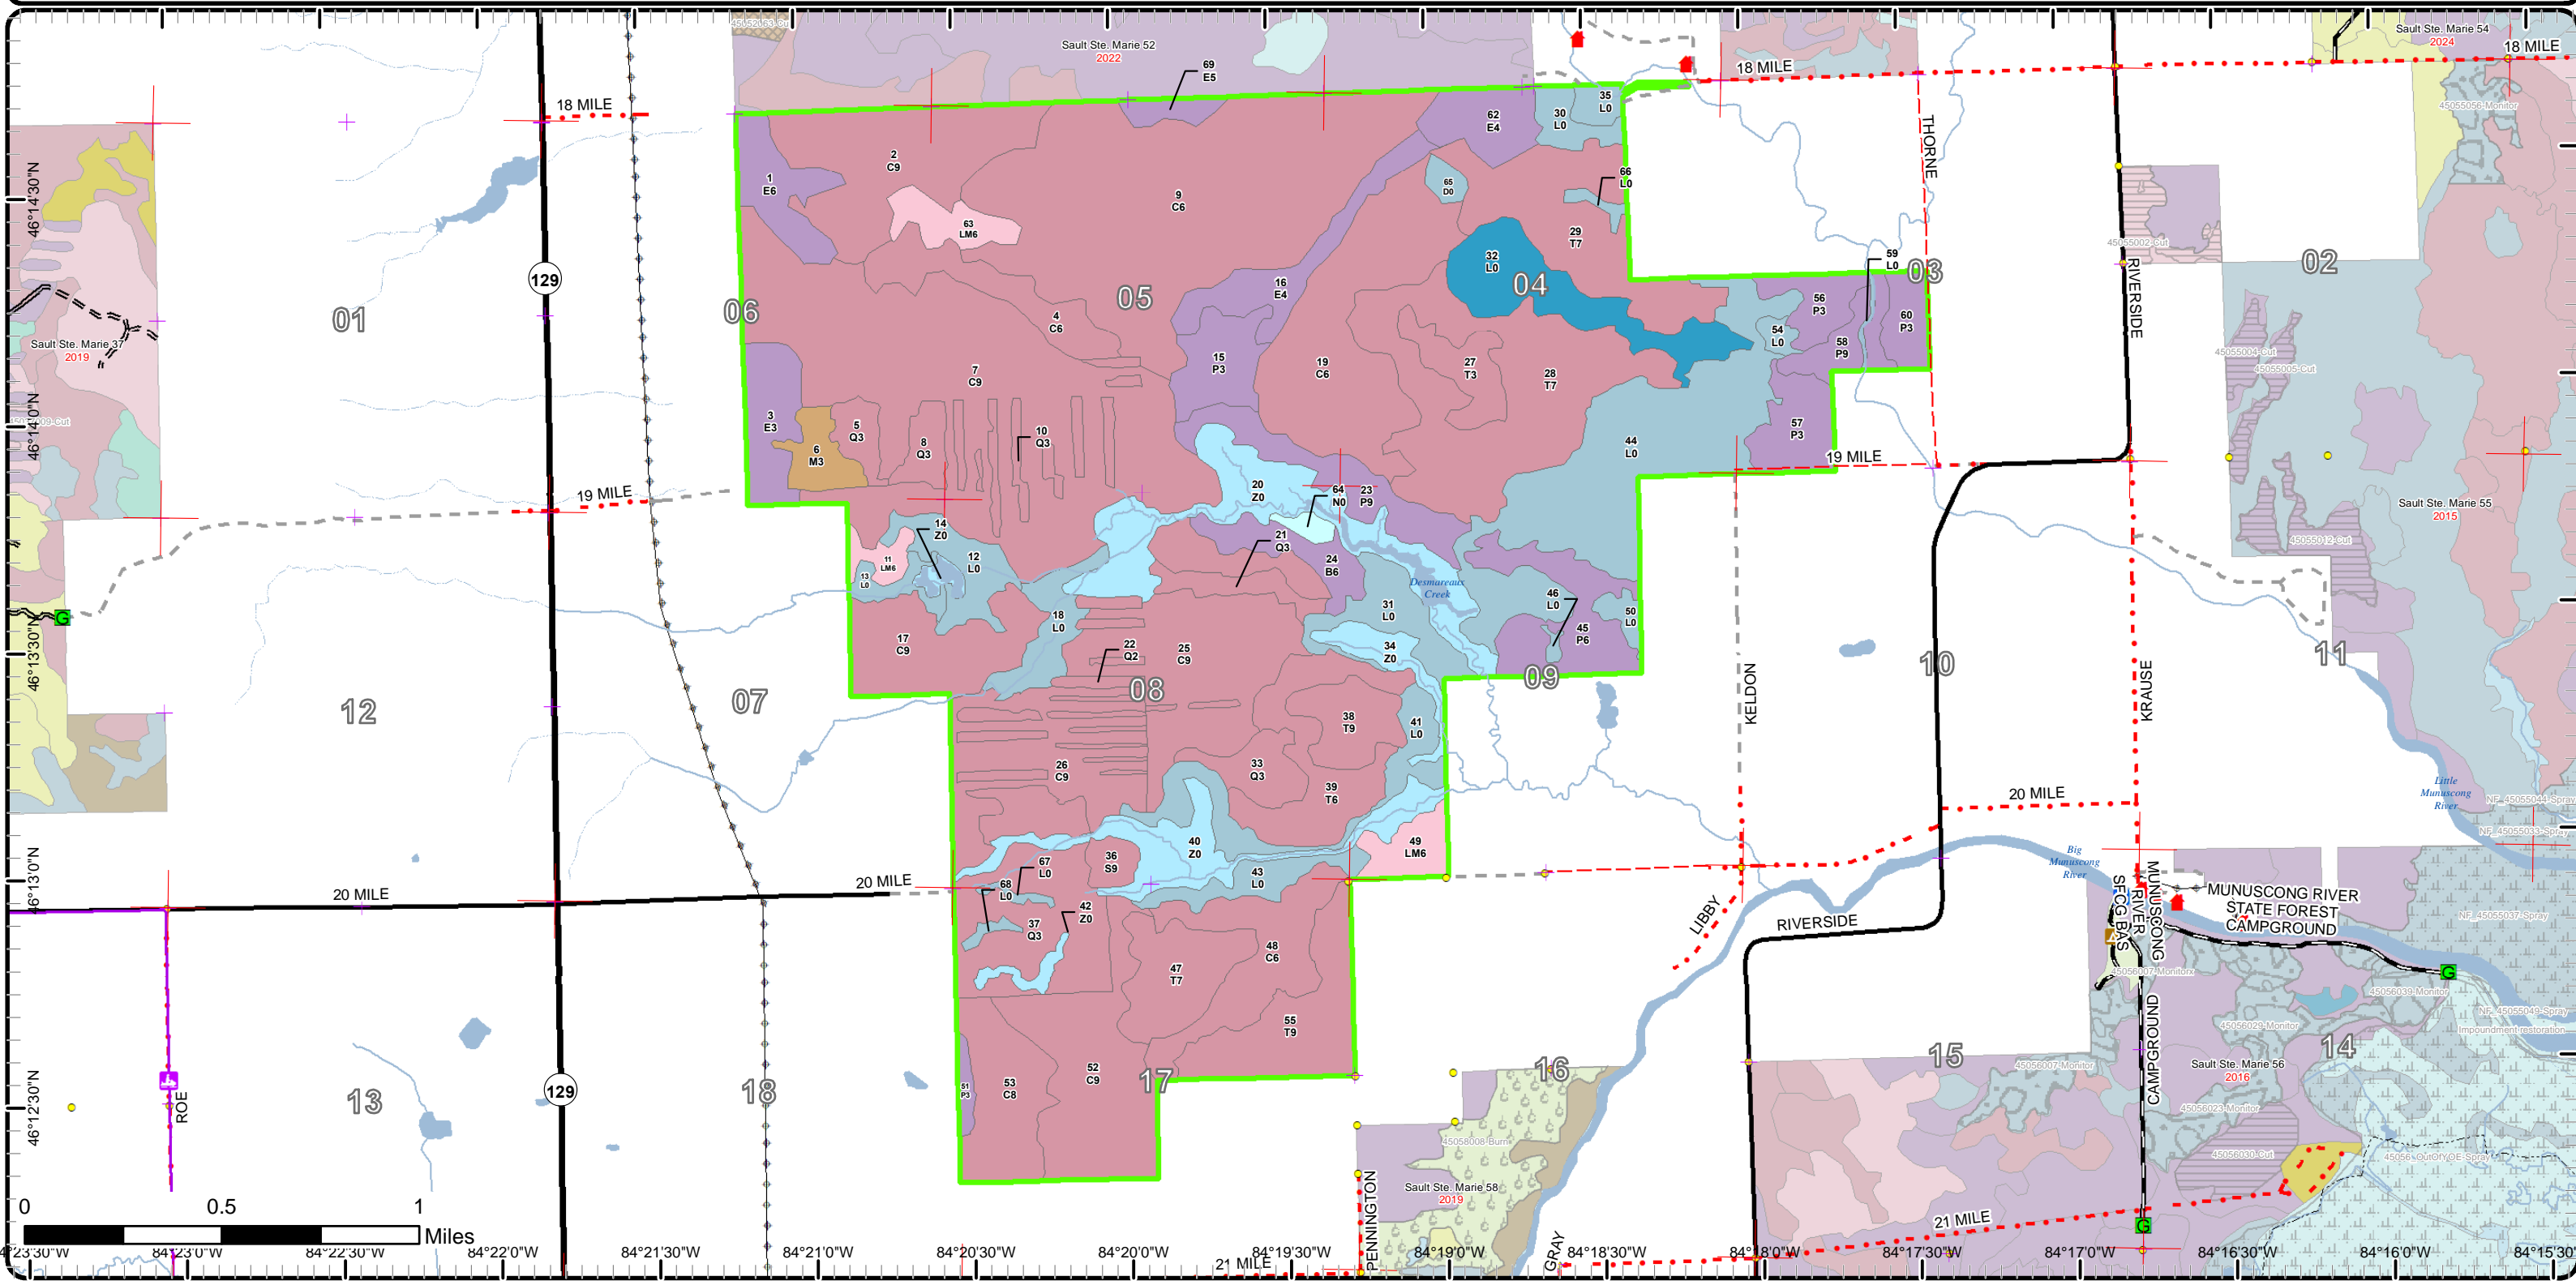

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
 HCVA = High Conservation Value Area
 SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Lake	A coldwater lake has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species to persist from year to year. Suitable conditions for coldwater fishes may occur in Michigan lakes if they are relatively deep, have substantial groundwater inflows, or are located in colder (northern) areas of the state. Such lakes are established by Director's action and designated as trout resources by Fisheries Order 200.
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.
SCA	Habitat Area	An area that provide some specific need for the life cycle of wildlife species, including State Wildlife Areas and Waterfowl Production Areas, deer wintering complexes in lowland conifer communities, grassland openings and savannas. Habitat areas are distinct from critical habitat designated for recovery of endangered or threatened species (such as Kirtland's warbler or piping plover areas) in that they are more general in nature, are not primarily associated with threatened or endangered species, and are not covered by species recovery plans that are developed in cooperation with Federal agencies.
